### Kid Gloves, and Their Production

The material used in making a kid glove are either the skins of kids from a butcher's knife. John Orr started weeks to 3 months old-and these across the plains in 1849. The roads

moval of the hair or wood, the skins was Wm. Prouse, now living in Nurb are placed in a solution of lime, where City, about forty miles southeast of Salt they remain for some time, after which Lake. Prouse had worked in mines bewith the aid of a blunt scraper. This now known as Gold Canyon, near the terms. removed, and the skins then are ready time took a pan, and, going down to the shade desired. The only exceptions to lowed, when Orr, Kelly and several with it and its employment will be gencalled evening colors, which are pro- samed prospecting. Kelly and Orr duced by immersing 200 or 300 skins at went up the canyon until a little fork thoroughly dried in a room heated up working he noticed a very narrow sown beyond a certain limit. No exto 180 deg. Fahr., the skins reach the place at the fork, where the water cessary to be sown on an acre of barely covered a slab of slate rock. is a most delicated operation, and not Idly he examined it, and noticing a ground, for different varieties of soil only requires skill but good judgment. small crevice near the edge, drove the sandy soil should have more seed sown The gloves have to be cut with the shift into it, breaking out a piece. The in it than a heavy or fertile one, and water running over it washed away with the harrows commonly used, we head down, and great waste of material the underlying dirt, and in a few sec- believe that most farmers do not seed would result from the employment of any but the most skillful hands. One where the rock had covered it. It was any but the most skillful hands. One skin will cut on the average from 3 to 4 gloves, according to size required; though when large sheep skins are used, one skin will give from 9 to 10 inferior gloves. The squares thus cut are put gloves. The squares thus cut are put up in packages of from 6 to 12 pairs of only nugget. He still has it in his poorly pulverized, and then uneven and N. E. Farmer. gloves, and by means of a punch and a possession. the first ever found in powerful press, are cut out in pieces, Nevada. ready to be sewed.

The sewing on fine gloves is all done by hand, and requires the best seamstresses. Over 6,000 stitches are required to sew a pair of ladies' gloves, and the best hands cannot finish more than 4 pairs in a day of 12 hours. For the sewing of lower grades of gloves there is now a machine in use, but, even with this help, the best hands cannot sew more than 12 to 14 pairs per day. The making of button-holes, putting on buttons, packing, etc., all require extra hands, each trained in their special vocations, and thus a glove, before being ready for sale, passes through no less than 200 different hands. The largest glove producing the eastern bank, is very often passed how anxious we were to make an early countries are France, Germany, Belgium, Austria and Italy. England also makes some few gloves, but mostly for some one competent to describe the ting them in too early, the cold or

A NICE, LIGHT, TOAST LUNCH.-IL irgs from the public roads that acco-mulate in ditches and pools into which eyes mouth ailment prevents proper masti-cation of harder food, one vants a light, easily digestible and easily mastl-cated dish or lunch. Well-cooked catmeal, the grains nearly whole and not "all in a mush," is quite good, but is not accessible, and is not liked by all. Latterly we have found the following very good, especially for a late supper or lunch, eaten only an hour or two before retiring: Toast some slices of bread pretty well, scraping off any blackened, charred portion, lay the slices on a plate, preferably a soup-plate, and pour on cold milk enough to generation by faith, the vicar's condonement, and all those doctors' things ! wet it through, and leave half an Inch or so in depth of milk in the plate. cod milk; a little extra cream in it is all the better, and a very trifle of salt improves it for our taste. Put over the ast thus prepared an inverted large earthen bowl, or tin basin, large enough to cover it and set down upon the plate all around. Put this in a warm, not very hot, stove oven, two, three, or more hours in advance. Th milk will cook and evaporate-and its substance be condensed in the toast, while the cover will keep the toast moist. It is then very good, and eats well without butter, though a little may be used if desired.

BREAD .--- For five small loaves, take one quart warm water or milk and wamitted by all who have experimented ter, two-thirds cup yeast, two potatoes mashed fine; make a thin batter and set where it will keep warm. Prepare this about bed-time; in the morning knead with flour until quite stiff, put it in the pan again and let get very light; knead into loaves and put into the bak-ing pans; let it rise and bake in a hot oven. It must not be allowed to get cold, or sit where the wind will blow upon It during the process. A wooden bowl is the best for rising it, and it should be wrapped and covered with a woolen blanket in cold weather. If at any time it smells or tastes in the least sour,

dissolve one-half teaspoon of soda in a cup of warm water and mix it in.

### Profit, \$1,300.
