VENTILATION .- The following simple pian of introducing fresh air into rooms and work-shops, stables, etc., without causing any direct lateral current, is of great value as a rough and ready means of ventilating. The whole con-trivance consists of a narrow board about three or four inches in width, and as long as the thread of the window which It is to be used. This board is placed on edge under the lower sash, which is then closed down upon it; the effect of this is to raise the lower sash tween the two sashes through which fresh air passes into the room, whilst the current being directly upwards, does not produce the objectionable draught caused by an open window.
