It was on a Tuesday that I got the monkey, and by Thursday everybody began to treat him coldly. It began with my little sister. Jocko took her cell away and climbed up to the top of the door with it, where he sat and pulled it to pieces and tried its clothes on, only they wouldn't fit him, while sister, who is nothing but a little girl, stood and howled as if she was being killed. This made mother begin to dislike the monkey, and she said that if his conduct was such he couldn't stay the monkey was invited into the house, and I've been told we must bear with

A little while afterward, while machine upstairs, and said: "Well, I never, that cook has the impudence to he sewing on my machine without ever asking leave." So she ran up stiars and found that Jocko was working the machine like mad. He'd taken Sue's night-gown and father's black cost and a lot of stockings, and shoved them all under the needle, and was sewing them all together. Mother boxed his ears, and then she and Sue sat down and worked all the morning trying to unsew the things with the selssors. They had to give it up after a while, and the things are sewed together yet, All this made my mother more cool toward the monkey than ever, and I heard her call him a little beast.

The next day was Sunday, and as Sue was slitting in the hall waiting for mother to go to church with her. Jocko gets up on her chair and pulls the feathers out of her bonnet. He thought he was doing right, for he had seen the cook pulling the feathers off the chickens, but Sue called him dreadful names, and said that when father came home either she or that monkey would leave Father came home early on Monday,

and seemed quite pleased with the monkey. He said it was an interesting study, and he told Susan that he hoped that she would be contented with fewer beaux now that there was a monkey constantly in the house. In a little while father caught Jocko lathering himself with a mucilage brush, and with a kitchen knife already to shave himself. He just laughed at the monkey, and told me to take good care of hun and not let him hurt himself. Of course, I was dreadfully pleased to find that father liked Jocko, and I knew that it was because he was a man and had more sease than girls. But I when father went into his study after

The expressman afterward told Mr. Travers that the monkey pretty nearly killed everybody on the train, for he got nold of the signal cord and pulled trail portion, just so that they will not it, and the engineer thought it was the come through, and for a distance of conductor and stopped the train, and another train just behind it came with-in an inch of running into it and the upper side to hold on to the top of smashing it to pieces. Jocko did the a bex when in use. The corn is shellsame thing three times before they found out what was the matter, and of the nails, the board resting in a tied him up so that he couldn't reach the cord. Oh, he was just beautiful! But I shall never see him again, and Mr. Travers says that it's all right, and that I'm monkey enough for one house. That's because Sue has been saying things against the monkey to him; but never mind.

First my dog went and now my menkey has gone. It seems that everything that is beautiful must disappear. Very likely I shall go next, and when I am gone let them find the dog and the monkey and bury us together.

Substitue for Earthquakes. Queer how the force of habit will catch hold of a man. There was old Major Dogshow who was a terrible victim of it. The Major when a small boy went down to Peru where they have earthquakes and revolutions Drainage will prevent our best grasses from running out. It will prevent clover or wheat from freezing have earthquakes and revolutions every ten days or so; where a man works to get his enemy elected President, for the sake of seeing him assassinated. The Major lived in that country till he was nearly tifty years old and he had got, by that time, accustumed to being mixed up in actvil move the fatty matter from the inside. war or fleeing from an earthquake a bout half the time. Finally he mov- and glauber salts in equal parts, and in ed back to the United States. At the the proportion of about one half ounce end of a week he was unhappy. He of each, for each skin, with enough missed the revolutions and the earthquakes. Occasionally, he contrived to dream there was an earthquake, and the thin places. Double the skin toquakes. Occasionally, he contrived to then he would hop out of bed and rush gether, flesh side inside, and lay it out of the house, without stopping to away in a coel place. At the expiradress, and would run half a mile, howling, before he got sufficiently awake to realize his mistake. This kind of got the neighbors to thinking the Major "had 'em." But this didn't afford much relief. However, a political compaign came on, and the Major as before and place it in a warm place, cal campaign came on, and the Major moved to Philadelphia, and used to go to ward caucusses and take a prominent of which, soak it for twelve hours in part, and he was elected to the Board | the following: Four ounces of alum, of Aldermen, and got his head thumped with a cuspadore at most every rain water to saturate the skin. The meeting and that, in a measure, made skin is not to be placed in the mixture up for the loss of revolutions. But the until it is cool enough not to scald the Major hankered for earthquakes and at last the desire to experience one beWhen dry soak again as before, and recame almost uncontrolable. He consulted a doctor. The doctor said he though he could help him. The doctor sufficiently soft. Lastly, smooth the owned an old Mexican mule with a inside with fine sand paper and pumice back as sharp as an ax. The mule had been in the army ten years. He took been in the army ten years. He took it out in an open field and put the Major on its back. Then the mule be-Major on its back. Then the mule began to buck. Did you ever see a mule buck? It jumps about four feet into the air, and comes down stiff-legged, A little present assistance would be of little present assistance would be of been fitted with a wooden leg, on and the jar the rider gets is enough to more use to him than a monument which it moves about with the utm loosen his teeth. And you can't get after his death. off unless you fall off, and then the mule may jump on you. The Major knew that, and he hung on for dear life. The doctor danced wildly about the problem of the major which serves as a novel and very delicate barometer. When the insect finds knew that, and he hung on for dear life. The doctor danced wildly about as the mule bucked and the Major swore and screamed. "Is it equal to which suspend the web, rain and wind show—if he an earthquake!" he yelled. And the may be expected; if reefs be let out, fine weather is certain; if the spider howled: "Hang it! yes; it's six of 'em, with a volcano and a stroke of lightning thrown in!" The mule finally quieted down, and they took the Major off. He was the sorest, lamest, maddest man in the State. And he says he has had enough earthquake to last him to exhibit blood corpuscles, a life time, but he hasn't got through with the doctor, who had better leave

the country before he gets well.

#### AGRICULTURE

CURE FOR WOUNDS AND SORES .- In the treatment of wounds and sores in animals diluted carbolic acid is invaluable. In hot weather it often occurs that a wound cannot be cured because of having become putrid and flyblown when gangrene sets in and the animal is lost. Carbolic acid can be adminis-tered with a almost certainty of affecting a cure. It keeps a wound in a healthy state and enables nature to healit, When putridity has commenced this acid will at once destroy the germs of decomposition and purify the wound. It has also been applied with in her house. I call this unkind, for equal effect in cases of scab and footrot in sheep for a minute or so in wa-ter containing one-fiftieth part of carbolic acid. This is done after the sheep is shorn. It is not necessary for A little while afterward, while mother was talking to Susan on the front piazza, she heard the sewing-machine unstairs, and said: "Well, I some gressy substance and coal tar, capable of forming a plaster of such consistency as will adhere to the animal's foot for two or three days, and thus prevent the air from striking in and destroying the effect of the application. Where there are many of a method is to separate such from the rest of the flock, place the fluid mixture in the bottom of a trough and cause the disabled ones to pass through It slowly. This may be a good deal of trouble, but one who has a care for his flock, and knows the value of such care will hardly begrudge the labor. To produce healing of a wound in a

horse or a cow, some stimulant is near-ly always required. This may be common spirits of turpentine or the compound tineture of benzoin or that of myrrh and aloes. Either of these may applied with a feather once a day, or if the wound is deep, the stimulan should be injected to the bottom with a common squirt can or a syringe. Wounds should always heal from the bottom, and to secure this the opening should be kept free, by means of a plug of lint dipped in the stimulant used. Lint may be made by scraping a piece of linen cloth such as a towel, with a knife and collecting the loose fibers. Linen only should be used, and never cotton or wool for this purpose. If pus is inclosed in a wound and the opening is permitted to close, an abscess will be formed, or the pus will be absorbed, with some future ill effect. In the case of deep, punctured wounds careful search should be made for the possible presence of splinters or other oreign bodies and to enlarge the opening will often facilitate the search assist in the ultimate healing.

MANGE ON A HORSE .- This is caused by an insect. Whitewash the stable and stalls with lime and cover the floor also with it, as the mange insect will live upon the wood work for some months, and return to the horse if no and had more sease than girls. But I destroyed. Treat as follows for the was only deceiving myself and leaning disease. Make an ointment of lard, on a broken reed. That very evening twelve parts, carbolic acid one part, when father went into his study after and sulphur two parts. Rub these tosupper he found Jocko on his desk. He had torn all his papers, except a continuous of the had torn all his papers.

#### DOMESTIC.

A DISH OF STUFFED CABBAGE.— Choose for this purpose a large, firm cabbage; take off the outer leaves and lay in boiling water ten minutes, then in very cold; do this several hours be-fore you are ready to stuff it; when perfectly cold bind a broad tape about it, or a strip of muslin, that it may not fall apart when the stalk is taken out; remove this with a thin, sharp knife, leaving a hole about as deep as your middle finger; without widening the middle finger; without widening the mouth of the aperture, excavate the centre till you have room for four or five tablespoonfuls of forced meat, more if the head be larger; chop the bits you take out very small; mix with some cold boiled pork or bam or cooked sausage-meat, a very little onion, pepper, sait, and pinch of thyme, and some bread-crumbs; fill the cavity with this ind a wide strip of muslin over the hole in the top, and lay the cabbage in a large saucepan, with a pint of "pot a large saucepan, with a pint of "pot liquor" from boiled beef or ham; stew gently until very tender; take out the cabbage, unbind carefully, and lay in a dish; keep hot while you add to the gravy, when you have strained it, pepper, a piece of butter rolled in flour, and two or three tablespeonfuls rich cream or milk; boil up and pour over the cabbage.

LACQUERING .- This is done in two ways, called cold lacquering and hot lacquering. By the former, a little lacquer being taken on the brush, which should be a common camel-hair varnish one, it is laid carefully and placed in an oven, or on a hot stove; the heat from this continued only a minute or two is sufficient to set the lacquer, and the work is finished. By the second method, the work is heated first to about the heat of a flat-iron as used by the laundress, and the lacquer quickly brushed over it in this state, the work being subjected to the over for a minute or not, according to the judgment and pleasure of the lac-

PICTURE ON SILK .- A very simple process is in use by which colored pictures may be applied to silk so per-fectly that the ornamentation is mistaken for hand-painting. The pictures of flowers, fruits and other objects are printed in oil colors on especially prepared paper, and can be arranged in designs to suit one's fancy. They are transferred by simply moistening the back of the picture with water and back of the picture with water and pressing it on with a hot iron. This decoration is so much easier done than hand-painting that ladies are using it for ornamenting the panels, collars, pockets and sashes of dresses.

CATARRH.-A health publication and heaters, such as sweets, fats, condiments and starch. This excess of carbonaceous foed excites and inflames the mucous membranes of the throat, nasal passages, bronchial tubes. says one of the most prominent causes nasal passages, bronchial tubes, etc. It is also caused by indigestion and constipation. M. Aube has patented in France a method of converting iron into steel, and at the same time producing illuminating gas. Iron is placed in a retort An exchange prints an article headed "How Oilcloth is Made." We have read it through carefully, but have failed to find the information we seek, which is how oilcloth is always made so all-fired cold.

In this placed in a retort with charcoal or coke in layers, and heated to 900 deg. C; fatty matters are then injected, and as soon as decomposition has taken place a jet of dry steam is passed over the Incandescent mass. The result is said to be that the iron is converted into steel, and carburetted hydrogen is given off from

Can Piles be Cured 7

Is the most impor ant question to-day with suffering millions who, when looking at the long list of useless pile nostrums, feel as the afflicted Bible Patriarch. like exclaiming: "I long list of useless pile nostrums, feel as the afflicted B-ble Patriarch. Ike excluming: "I have heard many such things, mi erable comforters are ye all, how long will ye vex my soul and break me in pieces with words?" It is not recorded that Job had piles, but he could not have had anything more pa nful, and the same question might have been saked then as since for three thousand years. Can piles be cured? We believe that Dr. Silebee has solved the problem, for nothing is more certain than that his "Anakesia" does absolutely and promptly cure the worst cases of piles. When half a million of afflicted assert positively that it has cured them, and in 20 years no one has used the dector's wonderful remedy without instant relief, and by following his simple instructions as to habit and diet all were benefitted and over 95 per cent, cured, all arguments and theories of those who haven't used them, go for naught. Anakesis is now prescribed by physicians of all selve ols and has been pronounced as near intailible as is possible. It is easily applied, perfectly safe, instantly relieves pain, and ultimately cures the most inveterate cases. It has grandly solved the problem that Piles can be cured. Samples of "Anakesis" are sent free to all sufferers on application to P. Neustaedter & Co., sole manufacturers of Anakesis, Box 3946 New York. Also, sold by druggists everywhere. Price \$1

be made of steel, we cannot shut our eyes to the truth that a great deal of an apparently admirable metal is quite unsuitable for this purpose. Thus Bessemer steel, it is said, cannot be used for belier plates with any certainty of obtaining a satisfactory result, and the reason appears to be this: The whole process of clearing some five tons or so of iron, from carbon, silicon and other impurities occupies only twenty minutes. When the cononly twenty minutes. When the con-tents of the ladle are under-blown or over-blown, the steel is unfit for boil-er-making. In the Siemens-Martin process, however, the chances of spoil-ing the steel are much less. In work-ing that system, if the metal be tapped half an hour ssener or later, the difference in the quality of the steel would not be so great as an error of a minute would produce inthe steel of the Bessemer converter.

The main cause of nervousness is mdigestion, and is caused by weakness of the stomach. No one can have sound nerves and good health without using Hop Bitters to strengthen the stomach, ourify the blood, and keep the liver and kidneys active, to carry off all the poisonous and waste matter of the sys-tem. See other column.—Advance

A dairying company of London has lately established a laboratory at which samples of milk received from farmers are subjected to chemical analysis. Prizes have been offered by the company, which are to be given those farmers whose milk supply stands highest in quality during a stated period of time. The samples of milk "Wall, I don't know 'bout that."

"Do you mean to say that you have caught more larger fish?"

"No; but I've caught some purty big fellers."

"Come, now, tell us the weight of the largest trout you ever caught."

"Wall, I can't exactly tell as to the weight, but you folks can figger on it.

Now you know it is over two hundred."

PIMPLES AND HUMORS ON THE FACE. -In this condition of the skin, the VEGETINE is the great remedy, as it don't know the weight of the biggest trout I ever yanked out, but I did haul up one on the beach, and after I landed him the lake fell three feet, and it
