It is evident, however, that coal will from young trees that interfere with the cream. growth of others. The expense of planting and cultivating a forest is considerable to do much damage to the trees.

The pile should be elevated from the ground a cord of sawdust, well saturated with so that the bottom sticks will not become liquid manure, is worth as much if not wet. The building where it is kept should more than a cord of solid manure. not be so tight that air will not freely circulate through it, for if it is the wood may be greatly injured by the dry rot. When wood is lett out of doors for a considerable time, it should be piled with the | walk about, while laboring under an attack back upward. If placed in this manner the bark will remain on the sticks, and mark is also applicable to the plan of exerbe of much value, according to its bulk, as cising a horse during the time he is under the portions of wood to which it is at-tached. The bark of most kinds of wood. He should be moved gently about before kingles easily and produces much heat. If sticks of wood are piled with the bark downward, water gets between the bark and sticks and causes the former to drop

Sitting Down on a Dog.

A woman and a terrier dog reached the Union Depot half an hour before the time of the Grand Trunk train for Buffalo, and while the woman sat down in the waiting-room as the best thing she could do, the Germany is surprised at the number of the dog made a tour of the room several fruit trees along the sides of the public times and then curled up on a seat not far roads. These t;ees are pruned and looked away to get a wink of sleep before being after by the "road makers," and three or turned over to the tender care of the bag- four weeks before the fruit ripens are wat gageman. All things were so so when a ched day and night by these guardians. In young man with a good deal of cane and the province of Wurtemberg the sale of watch chain and necktie sauntered in and the fruit thus raised is said to have realiztook a cool survey of the various females. The one nearest the dog not only had a young and pleasant face, but she was all alone. After satisfying himself of this the occasionally is the very best treatment for young man advanced, made a graceful bow it. When washing, brushing with a soft and inquired;

"Beg pardon, but do you go East?" "Ah! I thought so. If you have any bugs, one of its insect enemies. When the baggage I shall be most happy-ah-shall

be most happy to-" He had all the time been preparing to water. set down beside her on the dog, and the sentence was not yet finished when he sank gracefully back. Some dogs have been sat but this terrier had always been a pampered pet, and had been given proper time to in i but there should always be an abon- hot lard. It the lard is not hot when they When suddenly burried under 140 pounds of masher his ideas must have been terably confused, but not for long. A clock could not have ticked over six times when the ket for some time, is the height of folly young man began to rise up and whoop, and he was scarcely up when he made a course for the door which upset every band-box and satchel for a width of ten feet. As he went out of the door a black object let he went out of the door a black object let the even, or in which the products of comwhen the dog began rulbing against the vantage of an irregularly heated over. The baseboard to restore himself to his former sides and top are hotter than the bottom round shape that any one was able to dis-

many advantages over water-pipes of equal perimeter, but of circular cross-sectiou. The chief one is, bowever, that eliptical pipes are not so liable to burst in times of

severe frost. To secure a gloss when ironing shirts, take of raw starch one ounce; gum arabic, in the narrow space between the sheet one drschm; white of egg or blood albumen metal and the hot side and top of the oven, half an ounce; so uble glass, quarter of an ounce; water, q s. Make the starch into body of the oven, and by expansion it rises Those who had been detailed to make an a fine cream, dissolve the gum in a little and moves over the top of the oven, towhot water, cool and mix it with the albu-mer; and beat up the mixture with the simple as it is, appears to be founded on a starch liquid, then add the water class (so. good i.lea, and is reported to work well in tiuity of the lire. lution) and shake together. .. Moisten the starched lines with a cloth dipped in this legid, and use a polishing iron ta develop oven by the cook whenever an even heat

AGBICULTURAL.

Census Bureau reports that wood is y taree-fourths of the inhabitants of ited States for cooking and warm-redlings. The statement seems in the collected from the dairy farms, conand the patron is hable to the imputation of dishonesty in skimming. That there are dishonest practices resorted to on some farms, is undoubtly true, but it is also true that the test adopted by the creamery is not always a sure indication that cream has been tampered with to the detriment of the creamery. Where the patron does a share of the remaining himself, he may stir in a quantity of milk to increase the measure, and set aside to cool. When the jellies have hardened, the edges found exceedingly interesting.

To the Editor of the Democrat and Chronicle:

Sin:—My motives for the publication of the most unusual statements which follow are, first, gratitude for the fact that I have been saved from a most horrible death, and and thus increase the bulk of the cream. are young calves to be fed, and young pigo that ought to have milk, from which only a portion of the cream has been removed. This necessity implies the skimming at evaporation to the thick mass of butter

obtained from thoroughly ripened cream. reluctant to commence to burn coal. They This is also measurably true of cream raised during the Spring months when the young grass is yet watery; it will not produce the rich cream that milk will raise at take the place of wood in nearly all portions a later season, when the grass has perfecof the country within a very short time. ted its growth. Much of the "falling short" The forests are being destroyed very fast, is also due to carclessness in skinming by and little is being done in most parts of the person who collects the cream, or carche country to reproduce them. Much is lessness in handling. It should also be not standard to the hand to said and written in favor of cultivating ted that in taking a can out of the bank to forest trees for producing wood for fuel. be skimmed and setting it down on the There is much question, however, about floor (especially if it has stood along time) the economy of raising trees for furnishing that a layer of gas has formed between the fuel in most parts of the country. Trees that a layer of gas has formed between the flour, two teaspoonfuls of bak that furnish good fuel are of slow growth setting the case on the flow, the jar of ing powder sifted in the flour, and a small that furnish good fuel are of slow growth setting the can on the floor, starts this gas pinch of salt; last of all, two cups of careunless they are planted on soil that will upward through the cream, puffing it up produce good crops of corn, small grain so that it will measure more than if allowand other articles that have a ready sale. ed to rest a few moments to allow the gas or a broken tooth may be the consequence; Few varieties of hardwood trees will attain a growth sufficient to make good cord wood in less than twenty years. After that period, according to the estimates measurement did space permit. What is made in foreign countries, the annual needed is that all milk should be allowed teaspoonfuls of baking powder (when so growth will amount to about one cord per- to stand till it acquires a ripeness. Then many are used do not heap the scre. It is necessary, however, in order it should be measured by a careful hand powder in the spoons), one cup of blanched to keep up the productiveness of the forest who has that rare faculty to do even han and chopped almonds, one cup of seedless is amount of wood from trees that ded justice between the patron and the raisins (also chopped), one cup of cutron exhibit marks of decay, from limbs or party who employs him to collect the cut in small pieces; stir the almonds, rai-

Bright's Disease of the Kidneys. This

may sound like a rash statement, but I am

prepared to fully verify it. Bright's Dis-

ease has no distinctive symptoms of its own, (indeed, it often develops without any

pain whatever in the kidneys or their vi-

cinity,) but has the symptoms of nearly every other known complaint. Hundreds

of people die daily, whose burials are au-

thorized by a physician's certificate of "Heart Disease" "Apoplexy," "Paralysis," "Spinal Complaint," "Rheumatism,"

"Pneumonia," and other common con

plaints, when in reality it was Bright's Disease of the Kidneys. Few physicians,

and fewer people, realize the extent of this

disease or its dangerous and insidious nature. It steals into the system like a
