DEREDIST. CAN PROPERTY

AGRICULTURE,

AGRICULTURE, CARE OF HARNESS IN SUMME.—Harness is more rapidly injured in summer, than in winter. It is sometimes soaked with tain, and again subjected to heat and dir-tage of the perpendiculations used, and dir-ferent incides are adopted for employing them. A common way is first to water, and the sapply neatsfoot oil, as the best oil for the purpose. But a different course is adopted by others. One team manager in-forms us that the first timing to do is always to apply one or two coats of castor oil with the soap and water applied afterward do-to to penetrate it, and when leather is pur-tited to absorb water it hardens it and excludes the oil. By olling first the direct soft to plant to absorb water it hardens it and excludes the oil. By olling first the direct soft to plant to absorb water it hardens it and excludes the oil. By olling first the direct soft as the set of the tot. By olling first the direct soft washer it hardens it and excludes the oil. By olling first the direct soft as the set of the safe of the subsorb water it hardens it and excludes the oil. By olling first the direct soft as and the tot. By olling first the direct of the base it means the direct of the safe of the safe water, applied afterward dor-tor to form a half round, weating a short twenty minutes. DOMESTIC. Take more or less set of the dock of the safe of the is softened so that it is easily washed off, about twenty minutes,

is solicited so that it is easily washed out, and this obviates much of the scraping otherwise required, and the whole opera-tion may be performed at once. After be-ing oiled, wash it with it with a sponge and scapsuds, and when dry, rub over it a mixture of equal patts of oil and tallow, colored with iamp black, and a smell por-tion of Prussian blue. This is substantially colored with iamp black, and a small por-tion of Prussian blue. This is substantially the process recommended, and we shall be glad to hear from those who have tried different methods, as to their comparative value, and of the benefit of applying the oil first, and the fitness of castor oil as compared with other applications. While on the subject of using harness in farm-work in summer, it is well to recommend for any field work the simplest harness that will answer the purpose, both for the

DOMESTIC.

that will answer the purpose, both for the needless wear and tear of leather. Blin-ders are not needed, belly band nor crup-pers. Simole harness for the farm, kept comfort of the horse, and to prevent the always in good order, not liable to break- all excess from the surface after obtainage, will be a thing of economy in more ways than one, and sometimes prevent costly delays in the most busy days of the

year. KEEP THE BEST HEIFERS. —Saving hei fer caives only from the best milkers, and then work in artists' oil colors from the back until you get the proper effect from then weeding out the poorest of these, will soon lay the foundation for a choice dairy can be effectively colored by the above herd. And let us make the further im- method without any great skill being portant point, that selecting a pure bred required.

male from an especially good milking strain and then selecting the beifer caives from the mikers, the following up of this mode of breeding for even ten years with males from the same strain of blood, the blood of the progesy becomes united and inten-sified to a degree of prepotency almost equal to a thoroughbred. The dairyman may then place a strong reliance upon the give the neck a good rubbing with cammilking quality of the future progeny. He phorated oil at night before going to bed and also pin around the throat a strip of wants. When darymen shall proceed on woolen flannel. This is a simple, cheap Dongrad the openings: "Yon a
