WONDERFUL REVELATIONS OF THE MICROSCOPE.

Discovery of the Meat Beadly knews of Mankinds. The Barillus and Ite flavages. The case of wasting disease, as consumption or seriodic of the burge and it flavages. The case of wasting disease, as consumption or seriodic of the lungs and other or case, and in all cases attended with great weakeness, it was found to exert the most operation as it is infected from various notions sources. Having by recent experiments and research been shown to be the most fruitful cause of disease known, and the welface and health of every individual depending so largely on the freedom from their destructive ravages, it is but natural that the reporte of recent investigators in this field of the calculation for the subscitute and the subscitute the ports of recent investigators in this field of the walke of the subscitute and the subscitute they have at length been thoroughly proven, and are now receiving the unqualified in dorsement of the leading activation.

Sufference of the many sufference of the many sufference of the subscitute is infected from various nodous sources. Having by recent experiments and research been shown to be the most fruitful cause of disease known, and the welface and health of every individual deneading so largely on the freedom from their destructive ravages, it is but natural that the reports of recent investigators in this field of scientific inquiry should be widely read, and that every phase of these assounding discoveries should be subject to universal discussion. At first received with some suspicion they have at length been thoroughly proven, and are now receiving the unqualified in dorsement of the leading accentific mer throughout the world. But little else is calked of in the schools and clubs of science, and the medical and scientific journals are crowded with the testimony that is being added corroborative of the value of the marvelous discovery which is pronounced the greatest advance in medical science of modern times.

To L. Pasreun, the eminent French

many, a man whose work in connection with
the organisms of contagions diseases has
made him a recognized authority upon the
subject, by experimenting after the methods
of Villemans, has discovered and published
an account of one of the most dangeross
varieties, to which it is proven more deaths
are due than to any disease incident to the
human race.

He describes it as a simple cellular organ.

In any case where the bowels have been
covery, speedily restores the healthy functions and assists in building up and invigcorating the system.

In any case where the bowels have been

be seen and studied, they have the appearance of minute rod-like hodies having, when setive, some power of motion. They bend in the middle like a bow and straighten with a jerk that sends them a few times their own length. At the temperature of the human body they are the most active.

Their power of increase or reproduction is remarkably great. One germ in a few weeks time, under favorable conditions, will give rise to militume. The resulting some statements of the human bending the remarkably great. One germ in a few weeks time, under favorable conditions, will give rise to militume. The resulting some statements of constitution are established.

Consumption, which is producted in the production is remarkably great. One germ in a few weeks time, under favorable conditions, will give rise to militume.

mainties consect by these parasites as will be beceinsfier shown.

The studies of Lancisca, an eminent Italian, and Woon, Fonkan and others, are interesting, as showing the large variety of chronic diseases as herefolore classified, that result

diseases as herefolore classified, that rest from these germs. Among the most commo were "liver complaint," bihoosness or torp liver, dyspopsia or indigestion, long affe-tions, bronchins, kidney diseases, chron diarrhea, spinal complaint, fever-sore white swellings, hip-joint disease, rheum tism, malarial diseases, such as fever-and are white swellings, his-joint disease, rheuma-tism, malarial diseases, such as fever and agne or intermittent fever, general and nervous debilities, female weaknesses, chronic cutars of the head or onena, many forms of u healthy discharges from internal occans, and all the various scrotulous affections of the skin, glands, bones, joints, etc., including consumption, which is but scrofnious disease of the lungs.

In this large catalogue of apparently wide-

ly differing diseases, but really all depending upon a common cause, and therefore natu-rally to be successfully treated on the same rally to be successfully freated on the same general principles, examination of the blood and secretions revealed large numbers of these parasites, and curiously enough the number bore a direct relation to the severity of the disease, a comparatively small number being present in mild cases and a very large proportion in bad cases. Under the use of the specific treatment which they give, and which is substantially the same as that and which is substantially the same as that described and recommended later in this re-view, the number was seen to steadily dimin-ish from day to day until, with the restora-tion of health and bedily strength, they would not be found at all

onid not be found at all.

The greatest variety of symptoms were found to accompany their presence, due to peculiarities of the constitution, the part of the body most seriously affected, and the efforts of the different organs to rid the system of these germs. Among the most common were frequent beautiful mains mains. were frequent headaches, neuralgic pains. nausea, constipation, poor or variable appe nausea, constitution, poor or variable appe-tites, diarrhea, bad breath, heetic fever, cough, night-sweats, cold extremities, dyspepsia, catarrh, sore throat, sore eyes, etc., while where the skin was affected, salt-rheum, boils, carbun-cles, sourf skin, crysipeias, St. Anthony's fire and other symmtoms were comment, and all and other symptoms were common, and all gradually but with certainty were cured by the same means. The hecute fee er so often met with in consumption, with the backing or tearing cough, night awests, diarrhea, and other symptous due to the efforts of ma-ture to throw off and expel these germs were also readily controlled ned cured in the same way as were the old sures, abscesses and oleers in the lungs, liver and other im-

portant organs.

The corrosive acids and mineral poisons The corrosive acids and mineral poisons are found to possess the power of killing these germs, but the dangerous nature of such powerful agents prevent their internal use. For the purpose of expelling the germs when once within the system it is necessary

germs so briefly referred to, find in this remedy prompt relief and a permanent cure. The great and increasing demand for this God-given and peerless remedy for so many apparently different, but really kindred, all-ments, led to its preparation in pure and convenient form under the name of Dr. Pierce's Golden Medical Discovery. It can lierce's Golden Medical Discovery it can I am well, but exhausted for the time

mucos and secretions of the haman body. When the system is unhealthy or weak they attack the cells that make up the animal frame. Any abuninous fluid will formish them with food for growth, and a single drop is sufficient to contain handreds. Examined with increscopes of great power, which enlarge them so that they can be seen and studied, they have the appearance of minute red-like bodies having, when active, some power of the blood, are conquered by this powerful, purifying and invigorating medicine. Great eating electrically has it manifested its potentially and invigorating the strength of the blood, are conquered by this powerful, purifying and invigorating medicine. Great eating electric representations of the haman between the seven and studied, they have the appearance of minute red-like bodies having, when

remarkably great. One germ in a few weeks time, under favorable conditions, will give rise to millions. The process is by simple growth and division. Gold destroys or prevents their growth, and this tewly refrigeration prevents decay of ments and other animal foods. Exposed to warmth these small organisms attack and eat up the albuminous organisms attack and eat up the albuminous organisms attack and eat up the albuminous of the first stages of the disease the stages of the disease organisms attack and eat up the albuminous organisms attack and eat up the albuminous this terribly fatal disease, when first offering this now world-famed remedy to the public.

Vegetine

Rheumatism, Indigestion. BALTIMORE, Md., April 29, 1879.

Dear Str: I have been suffering from Rheuma-tism and Indigestion for over two years, and since I have commenced taking your VEFETINE! I have received great benefit. I have taken but two bot-lies, and I think with the aid of a few more I will be restored to my health again. I can recommend the VEGETINE for what it has done for me.

Loss of Appetite, Lassitude and General Debility.

BOSTON, Mass., May 11, 1879. MR. JOSEPH R. GROSE: MR. JOSEPH R. GROCK:

Dear Sir: Your cordial recommendation of VEGETINE as a Spring Medicine and Elood Purifier induced me to give it a thorough trial, and I cambidly admit that in my experience it is all you have chaimed for it. My daughter has always been afflicted with Scrotian humor in a very severe form, and particularly in spring was badly troubled with Loredte, Lassider and General Debitity. The VEGETINE had the desired effect and we are never without it. Its success was every bility. The VEGETINE had the desired effect and we are never without it. Its success was so apparent in this case that many of my friends and relatives have also tried it, with general satisfaction. Any further information will be cheerfully given by

Yours truly,

GEO, R. WILLIAMS,

Health Department City Hall.
