It is easy to note the evil effect of a change of diet with young animals, as teaching a calf to live on skimmed milk after having nursed the cow. Such a radical change often produces severe attacks of diarrices. While the matured animals are not so violently affected by changes of food as the young are, yet they often feel the effects of it, and show it at the pail. Cows; too, are very strongly creatures of habit, and they are not partial to changes of any kind, and even when the tood is improved in richness in midwinter, the good effects of the changes will not be marked, even when made with the greatest care, until

any time, is to begin moderately and in-

crease the quantity gradually so that the cow can assimilate her digestive or-

gans to the demand that is made

upon them. The fact may be observed

if the meal is suddenly taken away

from a cow, only to a more marked de-

was one-third more by so doing. It was one-third more by so doing. It was of better quality, and he could feed one-third more stock on the same acresse, for the cattle destroyed, by stamping, a great deal of good pasturage, At d that his cows might be protected, he growed and adjusted and the breech of the world, even or our own part of the world, even or our own part of even went so far as to darken the win- cap formaly adjusted. Thus, as is it, is to get food enough and clothes dows of his stables with muslin curtains. | shown to all who have a xamined breech-He was about to build new barns, and he loaders, swings back on a hinge or not to repine upon modes and qualishould put on pln de, for he considered spring, and when closed is securely ties to fit the theories of schools or co them more recessary on his barn win- locked by a lever clamp. dows than on his house. A merciful man was a creitui to his beasts, and this was a case where it unid.

COL. L. A. HARDER, of Jacksonville, thinks orat ges do better when grown in unprecedented in the history ing trees can be made for profitable him to be susceptible of such cultivation shade, as high cultivation and deep plowing promote blight and death, by expensing the roots. Some of the most productive pear orchards are those that are heavily mulched, and, therefore, the most completely shaded.

An old celery grower writes that there are two causes for rust on celery. One is too great exposure to the sun, the other is earthing up or hoeing when the ground or the plant is moist with rain

Religion is reprosched with not being progressive; it makes amends by reing

The two new six mon steel guns new being constructed in the ordinance shops in the navy yard at Washington will probably not be finished for several months. The weak of building them is necessarly a slow one. All the labor is performed in the shops here, except the manufacturing of the steel. That is done at the Midvale Works, in Easton, Pa. The steel then is shipped to Washington, and the work of converting it into cannon is performed. This is a complex operation, and to the looker on is decidedly interesting. The steel is first turned by a lathe working slowly, but with tremendous power until the heavy mass of "steel in the rough," so to speak, becomes a long cylindrico-conoidal column. In this condition it is placed in proper position and a hole is placed in proper position and a hole amount to if an easy chair does not drilled clear through it by means of what is called a "hog bit." The hog bit is a small rectangle of very hard steel, turned up at one end in such a out? No, what we want is the chair by manner as to form a rude vertical section of a spherical triangle. The whole lounge pushed near it: the easy seat rectangular piece is then clamped down upon a flat shaft of chilled tron in such a manner as to fit in and form to put baskets of bright wools about, one piece with the shaft. The latter magazines or portfolios of engravings, has at the opposite end a cylinder to give a "home look," if the convenshape, which end is held in a frame ient and comfortable seat is not added. and worked by appropriate machinery The visitor who coming in finds an easy and worked by appropriate machinery moved by steam upon one end of the stee column to be perograted. The end of the column is first "dug into" a little, and then the "hog bit" does its work. It revolves on its axis and the bit describes a circle, tearing out the tard steel slowly but surely. As the guns nave a bone of six men diameter, and the bit describes a circle of only one to appreciate pictures, or to teel coland the Lit describes a circle of only one to appreciate pictures, or to teel col-two and three-quarter inches radius or, but every one delights in being

themselves. The object of the "jacket"

The pumber of inventions that have Fiorida, having given the method a trial been made during the past fifty years is of the the hedge torm, and that other fruit- world. Inventions of benefit to the by being grown in the same manner, as since man was created; but looking back such close distance enables the trees to for half a bundled years, how many shade each other. Pears are believed by more are crowded into the past fifty than into any other fifty since recorded his reason being that the roots love the bistory. The perfection of the locomotive, and the now world-traversing steamsnip, the telegraph, the telephone, the sudiphone, the sewing machine, the photograph, chromo-lithographic printing, the colinder printing press, the elevator for hotels and other many-stoned buildings, the cotton gin and the spinning jenny, the reaper and mower, the steam thresher, the steam fire engine, the improved process for making steel, the sptroy sensibility in painful surgery cases, or dew, A cool, moist situation is best Nor are we yet done in the field of infor celery, and a little shade is no disadvantage. Earthing up should be done of coal gas and petroteum to heating when the weather and everything about and cooking operations is only tremoling the plant is dry. A cause of both rust on the verge of successful experiment, and rot is the entrance of earth between the introduction of the steam from the stalks during the process of earthing great central reservoir the general use front may be of small bronzed metal up, and this is very apt to be the case for heating and cooking is foreshadowed and the pocket should be put in diag with celery of a tall, blanching variety. as among the coming events; the artificial It is not alone the eigestive function consternation among dairymen, the naviproduction of butter has already created a eta. that makes a great butter cow, for of 3 gation of the air by some device akin to snimals equal in digestive powers one our present balloon would also seem to be of meal and half a pint of wheat flour, ing but very intile flesh and giving liftle them more subtle to grasp than that of the milk; the third may turn the forces into ocean cable or that of the photographer mik and make but little flesh or mus or the telephone? We talk by cable ele, as long as the tood elements can with an ocean rolling between; we speak in our voices to friends a hundred miles much greater annuion. Recurrence Syrup Co.

Sixts—I have been a great set.

I had been doctoring for three ferrim neuragin and to give it a trait in my own case, ed it, but found no relief until I have been a greatly benefited by its use. I have commenced taking your Syrup in entil I can wilk with entire free-loom my surprise, it began to help me, inverted to my grearly and it is a I found myself as well as every in a maproved. It is a I found myself as well as every in a maproved. It is a blood has a blood purifier, I think it has partifying the blood as and d-billiated system.

PORT BYSON, N. Y., 9eb, 20, 22.

FAIRPORT, N. Y., Marc Greatly the continuation for three fer four years, with different physical set is a second with the second prime in the second partification. The man support of the man since from pain, and my general health is very min a supprised. It is a I found myself as well as ever, increasing the blood as about purifier, I think it has partifying the blood as cure of rhealmathem. PORT BYBON, N. Y., Feb. 20, 32. FAIRPORT, N.
