

The Trade in Coffee.

"The greatest marvel to me," said a gentleman named Nord, who has resided where Mocha coffee is grown, "is that coffee labeled as genuine Mocha, which costs 12 piastres, or about 45 cents in the East, can be shipped thousands of miles after being transported a considerable distance on the backs of camels and then sold here, as I saw it advertised to-day at a leading grocery, at 35 cents a pound. I used to roast coffees in New York, where we mixed 20 pounds of Mocha with 80 pounds of other grades of coffee, and then sold the whole mixture as pure Mocha."

The cheapest coffee is the South American Rio and the most expensive the aristocratic Mocha from Arabia. The extravagant fiction writer of our day has been fastidious in his dallying over a cup of delicious Mocha. To one who is accustomed to the strong, thick Rio, Mocha tastes at first insipid and weak, but when one's palate has once been adjusted to it he learns to appreciate it as he does a Havana cigar. Coffee merchants set much store by the appearance of the berry, which is frequently colored or glazed after having been sorted, but Mocha, the rarest brand of all, is about the most unsightly in appearance.

The most singular specimens of coffee which were to be seen among the hundreds of little pans which the buyer at a local house exhibited was Liberian coffee, a large, coarse berry from Africa. It is strong, but not popular. The prince of all coffee is Java. The Old Government Java has won a reputation which no other brand can ever supplant. It derived its name from the fact that the Dutch government has largely controlled the coffee crop of Java, formerly selected large quantities of the best coffee, held it in store awhile and then put it on the market. Interior Java coffee is produced on government land of the island of Java, the government furnishing the native seed and stimulating that he should keep less than 150 trees in each bearing orchard. If his coffee does not meet the required quality, the government takes it at a fixed price.

The principal adulterants used in coffee are chicory, peas and rye. The first-mentioned is the root of a plant with blue flowers which grows wild, and is grown extensively in Europe. Chicory is itself often adulterated with tobacco and with bark. Many of the poorer classes buy coffee, and extract to mix with their coffee as, mixed with a small quantity of coffee, it enhances its rankness and strength. The most abundant adulterant used in coffee is the baked rye, which is sold in large quantities of dandelion coffee were sold a few years ago, although they contained but little dandelion root, the bulk of the material being made of molasses and chicory. A novel coffee for invalids is now made of roasted winter wheat. The highest-priced ground coffee is a compound from France sold in small earthen jars at 45 cents each.

Coffee is shipped to this country in sacks or mats containing a half picul each. A picul is 133 1/2 pounds. Java coffee is shipped in grass mats, containing from 60 to 80 pounds each. Mocha coffee reaches this country from Aden in unique packages of 40 to 80 pounds each. They are lined with cocoa matting, the packages being called quarters, or four, termed eights, are enclosed in a coarse, strong covering of a material similar to palm leaves and tamped grass and are packed in boxes. Mocha is sold mainly for combination with Java, Ceylon coffee, which is highly prized in Europe, reaches this country in casks. Maracibo coffee, which is mixed with Java and Mocha, makes a delicate compound, is packed in sacks made of string and forming a fine mat, through which the meshes are large enough to keep the coffee from being crushed. The coffee is packed in a flattering trade in coffee compounded as above. Thus the Orient, the East Indies and South America are ransacked to furnish the customer a drink just suited to his taste. Java coffee is perhaps the most universally used as an excellent unadorned brand. Some of the Java sold here is really Sumatra coffee. The latter, however, is equally as good as Java. There are various grades of Java coffee, such as Sumatra, Malang and Praeger. Besides the above varieties, there are Costa Rica, Porto Rico, Jamaica, Manila and Malabar coffees.

AGRICULTURE.

QUINCE CULTURE.—The quince culture is a cross feeder, as is indicated by its fibrous roots extending and grasping every portion of the soil in its vicinity. It delights in soil that has received from the wash of fertilizing matters from higher grounds, nature's pockets, that have been storing up fertility for ages; and from this fact comes the mistaken idea that the quince should be set in low, wet places, and it is often planted where water stands the greater part of the year. In such situations no fruit tree will continue to thrive. I have had good success with quince set in upland that is quite dry, but in good condition of tillage and fertility, as with those set in moist, heavy soil, each receiving the same treatment. This is because the quince has a more extensive root system than most fruit trees, and its roots are more numerous and more fibrous. The injury done the quince by over-fertilizing is greater than is liable to occur to almost any other fruit tree, as in very rich soil, or a garden abundantly supplied with stimulating manures, its growth is excessive, to the exclusion of fruit-spurs, and the rank succulent growth continuing until the approach of winter, the quince is liable to freezing, producing blight the ensuing season.

In rich soils cultivation should cease after July, and any shoots of excessive growth that may appear should be removed. A moderate quantity of fertilizer, annually applied to soil of fair condition, is all that is required. Leaf, mold, manure, soda, and from ponds, form a safe and lasting dressing for the quince. It need not necessarily be incorporated with the soil, for when placed about the stems, new roots will be sent out to forage through the mass. An orchard that is treated will long continue in health and productivity. When propagated by cutting, strong shoots of the current year's growth are cut in the fall to one foot in length, having a hard, woody base, and the whole space between buds laid on above the top bud. Bury in bundles below frost, and in early spring plant in trenches in rich, moist soil, standing the cuttings at a slant of from 15° to 60°, so that the top bud will be even with the surface of the soil; stamp firm at the base and cover with one inch of sawdust or other light material as a mulch.

TATTERALL, the famous London houseman, deprecates what he considers the detestable practice of breeding mates through sale of the boat to foreign breeders. He is credited with saying: "The question is now and where to find the raw material for breeding, especially the short-legged rooky mares. For the last quarter of a century, and most likely for much more, our breeders have been selling the mares which they might easily produce, and the intelligent foreigner has been buying them up. He will take none but the sound, well made, short-legged, active mares, and has left us nothing but the feeble, the result being that we have a short crop and many weeds. Mr. Tattersall is not the only Englishman who looks at the matter in this light."

A "new" method, termed "lifting" is thus described: Although supposed to be an old method discarded, it consists in the use of a double-boarded plow, which opens the furrow, and a dropper, which is operated by a wheel and gears in front, so that the seed is dropped in the furrow, and the plow is raised, and the seed is covered. This method is said to be superior to the old-fashioned hill system. This quick planting has the advantage of getting the corn and weeds in the ground early, and men after labor in cultivation.

THE VIGOR and thrift of young turkeys is largely increased if hens two or three years old are kept for breeding purposes. Goodbirds are best produced by a distance for the sake of getting new blood. The vitality of the domestic turkey race is much run down by too long a term of breeding. One best remedy is to procure a fine bird from a breeder over 100 miles away, and to get it as early as possible. You will get your money all back with interest at marketing time next fall.

THE CROP of young chickens is not equal to the usual average. The long cold winter prevented the hens from laying as freely as they would have done. Consequently fewer hens became broody, and fewer chickens were hatched in March than common. Under these circumstances it will be best to set the hens as fast as they become broody, so the poultry crop is to be kept up to the average.

THE YOUNG CHICKENS must be kept dry. If they run about on the cold damp ground too much they get cramped and rheumatism, lose the use of their feet and legs, and do no good. The coop should be cleaned and put over the best drained ground available. It goes without saying that little chicks must be protected against rain.

FRILLY is, perhaps, the most important month of the year in the poultry yards. The poultry quarters are to be thoroughly cleaned up; hens are to be set; broods are to be looked after; to be fed as they become broody; and the birds, old and young, are all to be fed and seen to. Altogether April is a busy month for the poultry-keeper.

THE STRONGEST of bees consume the least honey during the winter, for "they turn away people every night!" "Honey is up in the morning, will you, old fellow?"

"Have already done so. There's no necessity of your bothering yourself to come around here. I'll attend to your notions!" "Of course you will! I know that before we came in! That's the reason I long ago quit going around here to see the old fellow boring the editors!"

"I gave that up long ago! If there's anything I hate, it's these fresh agents who go around making holes of themselves. I've been on the road for a dozen years, and I long ago found out that there's no use in being a bore!"

"Fine sanctimonious you have been, old fellow!" "Hate in the country! I've seen 'em all!" "Whose picture is that, old fellow?"

"Booth's! Fine picture! Best I ever saw! Recognize it anywhere? Fine actor, Booth! Wish I had him in my company!"

"Well, good-bye, old fellow! You'll have to excuse me this morning, can't stop any longer now! Terrible bore! Come around again in the morning when we've got more time! Want to have a chat with you about old times! Don't forget to keep us a-borning! Good-bye, old fellow, good-bye! Glad to see you looking so well!"

"And then all was silence save the mutterings of the horse editor, as he said something about matching that pair against Mand S. and St. Julien for ten thousand."

DOMESTIC.

Mrs. BELDEN'S DRYER Boiled Dinner.—Take a nice piece of corned beef, and a piece of salt pork, lean and fat together, put on in the dinner pot at 8 o'clock, and about five in the winter, at the same time in a separate kettle at half past ten, put in your cabbage, turnips and carrots at half-past eleven, your potatoes pared; boil all together, and at noon you can serve up a delicious dinner. A nice side dish can be made by tying a cupful of dried beans loosely in a bag, put them into one of the holes in cold water and gradually bring to a boil before the next goes in. Dish them up, add pepper and a little butter or cream. A nice dessert is made by taking two cupfuls of sour milk, with a teaspoonful of cream of tartar, and half teaspoonful of soda, but if sour is used add an even teaspoonful of soda, so salt if you put it in with the meat, stir in Indian meal to make a pretty thick batter, have a cloth bag made rounded at the corners and a trifle larger at the top, wet this, dredge over with flour, pour in the batter, tie the ends closely so it will cook, add a little cinnamon and a few dried blueberries or other fruit, put in at 9 o'clock and do not lift the cover for an hour. Serve with sweetened cream or some liquid sauce.

ELABORATE HAIR DRESSING.—It often seems as if ladies have no regard for their personal appearance, but only for the "wash-tub" and "brush" which would not at one time change the style of wearing the hair, since no one style can possibly suit all ages and all sorts of faces. The chignon was a thoroughly good one for many years, and it is still necessary never to be dragged and strained in a direction opposite from its natural growth, nor frizzled in a hot mat on the forehead. Elaborate hair dressing should be deprecated. It is not natural, it hurts the hair, which it often destroys, and the position of the arms and hands while performing the operation is very fatiguing. It is exceedingly bad for delicate people. Doctors are just now suggesting that a return to the old-fashioned "night cap" might avert some headaches and other ailments which are so common among ladies. It does really seem as if such an article would give the head a refreshing rest from comb, hairpins, etc. Few ever sleep with their hair at any time in disorder; but might easily produce an irritation which would banish sleep, therefore the general custom is to secure the hair much as is done by day, only probably in a more comfortable way. A night cap was used, and the hair might be simply well brushed out, but such a night cap must be of thin and soft material, rational shape and cleanliness.

BEEF TEA.—To one pound of leg or shin of beef, minced up small, add three cups of water, and boil for eight or ten hours, in the morning put it in a nice clean saucepan and let it come slowly to the boil, watching that it does not scum over, then put in a little salt to flavor, and a few drops of lemon juice. This broth should be kept in a glass jar, and used as a soup, or for medicinal purposes. It is very good for the stomach, and is especially recommended to the aged and infirm. It is also good for the nerves, and is especially recommended to the aged and infirm. It is also good for the nerves, and is especially recommended to the aged and infirm.

Tomato Soup.—A quart can of tomatoes, a half cup of butter, a half cup of oil, a half cup of salt, a half cup of sugar, a pint of hot water; let the tomato and water come to a boil, rub the flour, butter and salt together, add to the boiling mixture, boil all together fifteen minutes, rub through a sieve and serve with hot bread. This soup should be buttered, cut into little squares and put in a quick oven buttered side up and browned; serve hot.

CLARET SAUCE FOR PTERIDONS.—Take the yolks and whites of two eggs and beat them up well. Put these with a cupful of claret in a saucepan, add a little salt, and a few drops of lemon juice. Boil for five minutes, and strain through a fine sieve. This sauce is very good for the stomach, and is especially recommended to the aged and infirm. It is also good for the nerves, and is especially recommended to the aged and infirm.

Mrs. LADY'S TEA BISCUIT.—Sift a teaspoonful of soda into three even cupfuls of flour, add a half cup of sugar, a half cup of salt, and a pint of sour milk; stir together ready to mold, and pour in a little melted lard or butter, and what you need of flour, mold as soft as you can conveniently put into quick oven, and take care not to scorch them.

MARY ladies will not take oranges at dinner because they soil their hands in peeling them. In order to obviate this difficulty, and at the same time preserve them from becoming soiled, take out around the middle of the oranges through the rind to the pulp, and loosen the skins almost entirely with a knife without removing or breaking.

TO FRY FISH ON OUTLERS ECONOMICALLY.—Dry your fish thoroughly with a cloth, then roll it in flour, dip into a batter of flour and water, dip your fish in on both sides, dredge over some fine raspings, which you can procure from a fish market, fry quickly in boiling lard or oil.

A VERY PAINFUL accident happened to Mr. Smith, at Newport, the other day. He had been a fall, and last Sunday he heard every word of the sermon.

"This is nothing to the fall of our old man, who was killed by a falling log, as a consequence of which his descendants have heard sermons ever since."

Mothers, the best dressing for children's hair is Carboline, made from pure petroleum, and is especially recommended for the hair, and is especially recommended for the hair, and is especially recommended for the hair.

"Dressed pretty girl, that," said Clinker to Plumper.

"Yes, and a fine catch for somebody."

"Her pa has lots of it."

"How do you know that? You can't be sure of the worth of a man nor his wife, till you see them together."

VALUABLE AND CONVENIENT.—BROWN'S BRONCHIAL TROCHES are a safe and reliable remedy for Bronchitis, Coughs, and other troubles of the Throat and Lungs. Sold only in boxes. Price 25 cents.
