

DYSPEPSIA

Causes its victims to be miserable, listless, and depressed in mind, very irritable, languid, and drowsy. It is a disease that does not get well of itself. It requires careful, persistent attention, and a remedy that will cure the cause and tone up the digestive organs till they perform their duties willingly. Hood's Sarsaparilla has proven itself the best remedy in hundreds of cases. I have taken Hood's Sarsaparilla for dyspepsia, from which I have suffered two years. I tried many other medicines, but none proved so satisfactory as Hood's Sarsaparilla. THOMAS COOK, New York, Electric Light Co., New York City.

Sick Headache

For the past two years I have been afflicted with severe headaches and dyspepsia. I induced to try Hood's Sarsaparilla, and have found great relief. I cheerfully recommend it to all. Mrs. E. E. ASKAY, New Haven, Conn.

Hood's Sarsaparilla

Sold by all druggists. \$1.00 per bottle. Made only by C. I. HOOD & CO., Lowell, Mass.

PETERSON'S MAGAZINE.

PETERSON'S MAGAZINE is the BEST and CHEAPEST of the kind. It is published monthly, and contains the most interesting and valuable information. It is a must for every household. Two Dollars a Year. With Great Reductions to Clubs. COSTLY PREMIUMS FOR CLUBS. Address: Postpaid, CHAS. J. PETERSON, 36 Chestnut St., Philadelphia, Pa.

AGENTS

MISSOURI STEAM WASHER. WE WANT 1000 BOOK AGENTS. OUR WILD INDIANS. MASON & HAMLIN 100 ORGANS. UPRIGHT PIANOS.

THE GREAT GERMAN REMEDY FOR PAIN.

Rheumatism, Sciatica, Lumbago, Backache, Headache, Toothache, Neuralgia, Migraine, Sprains, Strains, Burns, Scalds, Bruises, Cuts, Wounds, Swellings, Inflammations, and all other forms of Pain and Suffering. Sold by all Druggists.

KIDNEY-WORT

THE SURE CURE FOR KIDNEY DISEASES, LIVER COMPLAINTS, CONSTIPATION, PILES, AND BLOOD DISEASES. PHYSICIANS ENDORSE IT HEARTILY.

WORMS

Worms in the human body are a source of great suffering and danger. They are easily expelled by the use of our INFALLIBLE WORM SYRUP.

ITS STOPPED FREE

GOOD NEWS TO LADIES! YOU ARE LAR. \$60.50 TON WAGON SALES.

RUPTURE

RUPTURE. A new and effective method of treating this painful condition. Send your name for more information.

DICTIONARY

DICTIONARY. A comprehensive dictionary of the English language. Available in pocket size for easy reference.

BLAINE AND LOGAN

BLAINE AND LOGAN. Agents for various products and services. Located in New York City.

HUMOROUS.

Another line specimen of a Roman pavement has been unearthed at Bride-well Lane, Bath, England, in the course of some excavating work. The pattern is composed of octagons 2 feet 7 inches each way, the intermediate spaces being filled in with squares. In the center of each octagon is a double quartet with a circle in the center, and at each end are pointed leaves. The tesserae are small from 3/4 to 1/2 of an inch square, and the colors used are red, white, blue and black. One side of the pavement is about 6 inches by 1 1/2 inches deep, and is covered with a mosaic of small stones.

Herbert C. Hill says the tannin of oak bark exists in two forms—first, as a tannic acid, which in its free state, has a reddish-white color, and second, as an anhydride of that acid called "phlobaphene," the color of which is brown-red. The distinction between the two is familiar to tanners, who designate the anhydride simply as "coloring matter," and reject bark containing too large a proportion of it on account of the very red color it imparts to leather treated with such bark.

What has become of the little lady you saw before you? Like so many others I have known somewhat fleshy. Indeed I have seen her in a dress that was very becoming to her. She is now a very thin and delicate creature, and I am sure she is a great deal better for it. She is now a very thin and delicate creature, and I am sure she is a great deal better for it.

What is that wooden box for, sir? "That's for the securities and money, you know. We must have some place to keep them," replied the practical president.

A MOTHER'S DREAM.

The Wonderful Harmonious Development of a Famous Child Actress. The New York public was surprised a few days ago at the arrest, at the invitation of the Society for the Prevention of Cruelty to Children, of little Corinne, the child actress. The little girl, less than six years old, was taken from her parents and kept in confinement until released by order of the Court and Mayor of the city. Mrs. Jennie Kimball, the mother of Corinne, who has been known to the public as "Little Corinne," is a remarkable talent. When she was discovered, Mrs. Kimball's remarkable talent was asked of Mrs. Kimball.

What has become of the little lady you saw before you? Like so many others I have known somewhat fleshy. Indeed I have seen her in a dress that was very becoming to her. She is now a very thin and delicate creature, and I am sure she is a great deal better for it.

AGRICULTURE.

WORKING BUTTER.—Butter should be "worked" just enough to evenly distribute the salt through it. If the churning is stopped while the butter is in the creamy or granular form, and it is then thoroughly washed in clean water, or better, in salt water, the granules, there will be no necessity for working it to get out the buttermilk, as there will be none to remove. Butter that is spread out on a butter worker, or any similar platform, and pressed into thin sheets, and then folded upon itself three or four times as the salt is sprinkled on, will be very evenly salted. Butter that is unevenly salted will be likely to become rancid, and it is better to have a deeper color than unadorned. If a mass of butter is worked in a bowl or worked so small that the butter cannot spread out into thin sheets, it is possible to pack it over every side without getting the salt into every part. Butter that is gathered in the churn before the buttermilk is drawn off, is likely to be unevenly salted, the purpose of squeezing out the milk that should not have been allowed to be shut into it, but such a process requires hard work, while at the same time it is likely to injure the butter. It is the milk in butter that first causes it to change from good to bad.

One day several of the men were discussing the best means of ridding the camp of the bats, when a bystander said they had better not touch old Jim. He did not seem to be in the least annoyed. It was ascertained that he should not be molested. Then somebody expressed a curiosity to know how and where he got his milk. No one in the crowd knew anything, and the man who was said to be the owner of the cow, was a haggard, old man, who had been in the army, and was now in the city. He was hungry, and went off into a field and weeded a potato patch. A discovery that he had made. The boys gathered around him and listened, prying him with questions occasionally.

"Gentlemen," he said, "I've got a claim on the creek here a ways that will make me all rich. I haven't said anything about it, for I wanted to make sure. I dreamed it all out one night when I was asleep on the mountain. I came to me just as plain as anything. I know the gold was there, and I want to get it. I'll run tunnels a little with it and we'll divide. There's a mountain of it, with just a crust of rock on the outside. If I can get through the crust that is all I want. The mountain is all through it and you can help yourselves."

"Touched," said one of the boys, pointing to his own head, and the rest of the crowd nodded.

"I've located it all," said old Jim, slowly, "but I can't seem to do much work on it. I'm getting too old. Can't you help me?"

They took him to a cabin near by and made him a meal, and when he had slept a while they gave him more to eat. Then they told him to come there when he was hungry and they would show him the mine. Two or three days later a party of them went with him to his gold mountain as he called it. It was just like thousands of others, with no more signs of gold in its composition than of diamonds. But they hurried him with life motions. They led him and gave him strength, and told him to go on. They would help him after a while away. They told him to go on.

Every day the old man would set out to his work with some cheese rind. He had not slept a night. One or two days he began to bring home handfuls of earth and gravel to be examined. The boys looked at the mud patiently and said approved promising. The old man was discouraged and said they would help him. He knew it was there, but he feared he could not reach it. A day was set on for the two of the men to go to the mine and see that the work was accomplished. This satisfied him, and he started out happy. That night he failed to appear. The next day came and went, and still he did not appear. They searched for him where he was. On the third day they then volunteered to go out and search for him. They found the place at last, and he had been there all the time. A vein had been discovered, and old Jim was beyond a doubt. They got others to help them, and after a little patient digging they came upon the old fellow's body. He had been killed in his first drift.

Ferals are expensive in this part of the country, and none to elude at best. It was ascertained that a funeral would do him no good. They buried him in the old hat dug, covering it up once more, and on a big stone which was rolled in place on the mountain side they scratched the inscription: "Old Jim's body's here."

Diagnosis Beyond Price. Master Thomas Nichols of Jesus College, Cambridge, writes the following English note on the subject of pedicels. He says: "There is nothing more admirable in the lower world than precious stones, seeing they are the start of the earth, and all things in competition for their splendor and glory. Nature produces nothing more rich, and sufficiently contented in her most careful laying out, and in the end of the world, she is content with her own share of sunlight. You can have a bracket on each side for the support of the crown, and the crown will be more satisfactory than a window of sickly, spindling ones."

LAND AND SMALL.—According to the best evidence obtainable on the subject there is more profit to the dairyman in medium and small cattle than in larger ones. Those who are now advocating the general purpose cow, and who would be large in order to make a good paying lot. For our part we cannot see why a large steer is any more profitable than a small one. Each animal can sell by the pound and eat according to his size. Out on the carcass of large animals cost no more in market than cuts from small ones.

THE HOOS.—In weaning young pigs it is not necessary to remove them at one time. Take away the strongest first, leaving the weak for a week or two longer. As each is removed it leaves a larger amount of nourishment for the remainder, and by thus weaning them the weaker pigs are enabled to get a better start.

FALL PLOUGHING is a good means of destroying many vermin. The frost will kill all insects that are exposed to its power. Only the heavier soils should be plowed in the fall as the fine particles of light soil may be blown away if plowed in the fall. These fine particles are the most valuable portion.

REMOVAL is better than crude petroleum for the softening and clearing out of the gummed and hardened cut of mowers, reapers and other farm machinery.

The agricultural editor thinks that there is more room for a treasury commission to stamp out hydrophobia than for one to exterminate pleuro pneumonia, of which no trace exists.

PROFESSOR RUDY, of the Iowa Agricultural College, the best authority on the subject of the West, says the white turkeys from Eastern Europe are much better adapted to our prairies than the turkeys native to this continent.

Some interesting observations as to the relative value of dry and oysters as food were made in the Chemical section of the American Association at the recent Philadelphia meeting, by Professor W. O. Atwater. Fish was so nutritious as the most of animals, declared the speaker, but oysters should be ranked far below fish, he thought, in nutritive qualities.
