

Articles Carried to Keep-Off Diseases and Appraise Witches.

On the 23d, an extravagant gentleman stopped at a Denver fruit store and purchased five cents' worth of peanuts of the presiding genius, who happened to be a small boy whose brown skin and black eyes denoted that he was a child of sunny Italy. As the gentleman was in no hurry, and as the dirty awning over the peanut stand afforded some shelter from the rain, the gentleman lingered at his purchase and chatted with the boy. When he had finished, he put the five cents into the boy's hand. The youth smiled, thanked his benefactor, split open the coin and put it in his pocket. "Why did you split open that nickel before you put it into your pocket?" asked the gentleman. "Me split on nicks for lucks."

Why does the government spend so much money and risk so many lives in trying to capture the counterfeit? Suppose he does counterfeit government bonds, and the government loses money through not catching him. But the individual citizen could afford to be put to continual financial loss if such desperadoes were let go unwhipped of justice. It is only the valuable thing that is counterfeit; it is only in the light of purity and virtue that impurity and vice can be known. No one in these days would counterfeit a Confederate bond.

It is a very common practice to shut up fowls and keep them confined most of the time during the summer, on account of their propensity to scratch in the garden and among flower beds. Much of the ill effects of their presence may be avoided if they are let out for a short period at evening. It might be a good plan to watch them while they are out, although there is garden, and they will find enough on the grass plots to keep them busy. It is surprising how much benefit fowls derive from this time of exercise. The fowls seem to know that they are to have a chance to get out, and are much more quiet during the day; and if they are allowed their liberty at just about such a time each evening they will return to their coops without any trouble. I am inclined to think that as good as a whole day, so far as the health of the flock is concerned, for there is any article of diet that they are in special need of, they will hasten to the garden, and they will find enough on the grass plots to keep them busy. It is surprising how much benefit fowls derive from this time of exercise. The fowls seem to know that they are to have a chance to get out, and are much more quiet during the day; and if they are allowed their liberty at just about such a time each evening they will return to their coops without any trouble.

To make a pretty thermometer cut a piece of board three and a half inches wide and a half inches long, of one-eight inch thickness. Cover this with black satin. Place three small decalcomania pictures of bright daisies for taking off on silk on each side, making six all pictures. On the middle of the board tack the thermometer. Finish by attaching a small ring at the top of the board, and a small ring at the bottom to hang it up. The nicest paper to use is the one which is pasted into the back of the book. To strip old paper, use a small trowel to scrape the paper off. Heat a dampen again on the back. Heat a flat-iron to ironing heat, place it upon the picture until dry, being careful not to burn it. Wait a few minutes for the picture to cool, dampen it again thoroughly upon the back and carefully remove the paper.

Catarrh is Caused

By secretions in the blood. Therefore, to cure catarrh, purify the blood. Thousands who suffer from this disease, however they may try to get it better, it is not until they have purged their blood of all impurities that they are cured. If you suffer from catarrh, give Hood's Sarsaparilla a trial. It is the only medicine that has cured so many cases. It is the only medicine that has cured so many cases.

Decline of Man.

Dr. R. F. Friesell, in a paper read before the Chemical Society, London, says that the results of his personal experience with a long glass during a period of several months has convinced him that the substance when formed into laboratory utensils as a complete failure.

EGGS AND HAM.—A nice way to serve eggs with broiled ham is to cut some patty tins, sprinkle with fine crumbs of bread, break in the eggs in sauce, and then, without disturbing the yolk, pour it into the tin. Set the tin in a hot dripping-pan and let them stand in the oven until the whites are cooked. Then, after putting in a small amount of butter, broil them upon a hot platter, take the eggs from the oven and turn out on the ham. It is not necessary to close the door of the oven while the eggs are in; indeed, it is better not to do so.

EGG CREAM.—Beat the yolks of four eggs, three tablespoonsful of sugar and a dash of salt. Sprinkle with flour and mix. Add a dash of nutmeg and a spoonful of powdered sugar to the whites of the eggs and beat until stiff. Place the beaten yolks in a vessel in a pot of boiling water and cook gently, stirring all the time. When thickened, stir in the whites until thoroughly mixed, then cool. Serve in small glasses.

APPLE WATER.—Roast two sour apples and pour over them a quart of boiling water. Cover and let it stand for half an hour. A pint of washed dried apples may be used instead of the roasted apples.
