om so reliable a source as Mr. ty n and confirming by personal experience what we have time and again published in our columns. We also extend to the proprietors our hearty congratulations on the results wrought.

The latest thing in steam bicycles, according to the Chicago Herald, is the invention of a new Jersey man. The fluid used is gasoline, and is carried in a tank holding one pint, which is enough slave, to run the engine an hour. The boiler is made of copper and brass, of the dropwater tube type, with fourteen half-inch tubes ten inches long. It is a complete boiler, with anti-burning jacket, safetyvalve, steam and water gauges, etc. The water-tank is in the form of a globe and is fitted with a little pump which feeds the boiler. The engine proper, including driving pulley, weighs scant two pounds. The whole outfit weighs only eighteen pounds, and it is supposed to carry the rider along at the rate of welve or fifteen miles an hour.

An account of what is supposed to be dead sea fruit is contained in a paper on the botany of Sinai and Palestine, contributed by Dr. H. C. Hart to the transactions of the Royal Irish Academy. It belongs to the order of plants botanically known as the Ascleptads, and is compared to a gigantic cabbage from ten to fifteen feet in height. The fruit, which corresponds to the orange in size, is filled with air and silk. Mr. Hart found the date palm and the cypress growing on Mount Sinal at an altitude of 5500 feet above the sea level. Among the characteristic points of the Holy Land he mentions the red-berried Jerusalem mistletoe, which grows on the

Onions, to be deprived of strong odor should be boiled in salted water for ten minutes, and then put in cold fresh water for half an hour; after that they should be put into a stewpan with just enough cold fresh water to cover them and boiled gently till tender.

According to the Wiener Gewerbe no silix, potash, soda, lime, or borax. In appearance it is said to be a brilliant crystal, perfectly transparent, white and clear, and is susceptible of being out and polished. It is completely insolable in water, and is not attacked by Inoric acid, but can be corroded by wdrochloric and nitric acids. The most important feature that it possesses.

Making Trouble in a Boarding House.

"I want to give you a quiet talking to," said the manager of a leading boarding-house to a wealthy guest. had to discharge a good waiter to-day on your account.

"What do you mean, sir?" asked the gentleman, with some show of indigna-"You have spoiled three good waiters

for me already," replied the manager, firmly and respectfully. "You gave the man I've just sent away \$5 a month. Now, sir, that was either intended

as a generous gift or meant as a bribe to the man to give you more food and better service than you pay for. No matter what the motive, the effect was the same. I am always in the kitchen at meal times, and see to it that every guest has what he is entitled to and no more; so you got no advantage in that way, but you did receive a good deal more attention than you were enti-tled to. Mr. Jones, who sits at your table, pays me just as much as you do, and is just as good a customer to me. But he cannot afford to pay a waiter \$5 a month as you do, and the consequence

is the man neglects him to fuss with you. If he could afford to pay as much fees as yourself neither of you would get any advantage, but he cannot, and himself and family have been so neglected that I expect they will leave the house, and all your generosity does is to deprive me of a good customer."

"I never looked at in that light before," said the wealthy guest, "and I Zeitung a chemist of Vienna has inven-ed a new kind of glass which contains subsidizing the watter, or content my self with a present that is not ex-

pected. Glass plates have been substituted for copper in the sheathing of an Italian ship, the advantage claimed being exemption from oxidation and incrustation. The glass was cast, like iron, in plates to fit the hull.
