FARM NOTES

FROM present indications, it is probaole that this country barvest, this year, was the largest wheat crop ever raised Reports from Europe, too, speak very highly of the condition of transatlantic wheat. It was feared last spring that in Great Britain from the remarkably mild Winter and early Spring might force the wheat too much forward; but these fears was proved groundless. Neither rust nor insects did injury o the crop. Barley and oats, too, was of the Atlantic, it is hardly likely that even speculation could raise the price both pen and imagination as to cau

of wheat much higher. Eggs may be preserved in good order for several months in the following manner: Slake a peck of fresh lime in five gallons of water; when thoroughly slaked, add five gallons more water: stir it well, and strain it through gunny bagging into a barrel. Let it settle, and draw off the clean liquid into a proper vessel—a keg, jar or barrel— until it is half fu'l; then, being careful not to crack the shells, put fresh eggs into this lime water with a dipper, until the vessel is full and the eggs are covered with two inches of the lime water. Cover them with a cloth that fits closely around the edge of the vessel, and dip out the thick lime and spread it over the bloth one mch thick, leaving one inch of water over it. This water must be renewed as it evaporates. The eggs should be kept in a

There is no doubt that a well-kept onion and carrot and brown them slightly in a little butter. Then take a balf pint of boiling water brings the most profit to the farmer. Just as many as can be kept without crowding, and with ease and conven-ience, will be the most profitable. Poultry will not bear crowding any more than sheep or pigs or people, and it is well known that when any of these are too closely kept disease appears and works mischief. It is a necessity of the case, because cleanli-ness must be sacrificed to necessity.

THE latest statistics of the agriculural industry of New Jersey give the number of farms in the State as 34,307. thin slices, which must be sewn close together upon ribbon or tape an inch wide. It can be tied around any part \$190,895,833. The sum of \$14,891,412 is invested in live stock. There are 150,000 milch cows, yielding 15,472,-783 gatlons of milks 9,513,835 pounds of butter and 66,518, pounds of cheese. The total number of persons engaged and 23,672 farm laborers,

gers to clean up the waste, to eat the to three quarters of an hour, then sait otherwise would be intolerable and detrimental to health. On the farm them to be placed in a salable condiscavengers of another kind can be tion, and their advantages of soil locautilized in removing that pest and vigorous enemy of the farmer—weeds. And none are better for this work than sheep. They will keep weeds eaten off and down. They will also keep brush down that has been cut off, and will eat many corners that otherwise would | compete with the French ochres in rebe sowing seeds on the adjacent land.

> A WIDELY-KNOWN and honored representative of live-stock interests mont, Pennsylvania, and elsewhere, says, in a private note to the above and extensively employed by off-cloth journal: "I suspect that the Jersey Cattle business is fast getting overdone, and will go down rapidly pretty cow, and will pay with calves a \$5,000 each; to which the seller agrees, etc.

ONE of the most valuable mulches in your pocket—go home and do the agreeable to grandmamma! The whole shortening into the flour and wet with shortening into the flour and wet with the woodpile, which is usually mixed to the woodpile, which is usually mixed to the woodpile, which is usually mixed. with more valuable material in the slops from the house that are often thrown on it. The heap should be got out of the way before the approach of warm weather.

THE roots of most crops spread so to be my sister," he said, "Old men al-ways do make fools of themselves; but pare, core and slice them. Put the crust in the plate and then a layer of will give better results than putting it sliced apples, and sprinkle over them a all in the bill. Where the soil is fertile, thick layer of light brown sugar, then another layer of apples and more sugar, manure in the hill will be profitable by

the place of destination, or to enable him with one watch to keep both local and standard time. To this end there done out of season. is provided a simple device for uniting the two hands. It consist in a groove turned upon the hub of one hand, and out having your souls expanded with a split spring ring formed on the other and and sprung into the groove; this, by its elasticity, preserves a constant and uniform frictional contact with the other hand, which always maintains its proper relation during the normal movement of the hands, but still permits an adjustment between them, so that they may point to different times

A new way of making incandescent lamps has been patented by Messra Sowe ard, Probert and Boulton. They take a glass bulb with two electrodes ough it at a suitable distance apart, and either solid or tubular. A carbonceous gas is then inserted into the bulb, and the electrodes connected to a generator of high tension. Sparks pass through the gas inside the globe be-tween the electrodes and decompose the gas, so as to build up an arch or loop of carbon between the electrodes. This bridge is the filament and after exhausting the globe of the air the lamp is ready for use.

Dr. Bremer in a German journal advocates exercise in the high, fine air of the mountains as the best protection against the diseases contracted in city life. The characteristics of the mountain climate are the low temperature and air pressure, the low relative humidity, the high per cent of ozone, the strong light and insolation, the freedom from dust and bacteria. All these act well on the bodily health, The lungs work with greater strength, the heart beats faster, the blood circulates more quickly, appetite is increased perspiration becomes freer, the muscles become more energetic, and the whole body gains in strength and endurance.

"The cheapest postal service in the world is that of Japan, where letters are conveyed all over the Empire for two sen-about seven-tenths of a penny. This is the more wonderful, considering the difficulties of transit over a mountainous and irregular country which has less than one hundred miles of railway, while wagons can only pass over a few of the chief roads, and the steamers connect but a small number of coast stations,"

Celluloid, which is a combination of pyroxyline and camphor, is now made into very good imitations of ivory, ebony, coral, amber turquoise, etc. The pyroxyline is prepared from cigarette paper and a mixture of nitric and sulphuric acids. One of the most recent uses of celluloid is for making type and engraver's blocks for printing

Professor Delgado of Lisbon has come to the conclusion that the ancestors of the modern Portuguese were canibals. He has found the remains of 140 persons whose bones were blackened by fire split lengthwise to secure the marrow and bearing other indubitable marks of Laving served as food for man.
