igrate to New Jersey, "How did you come over, Pat?" asked a man of a well-known laborer in the yard of one of the Lewiston ills after the story teller had done

telling his story. "I left home," he began after exressions of diffidence, "when I was a ad, and my cousin he says to me, 'My boy, my boy,' and, begory, I was sad, I didn't ship nor pay my pasbooks, for them days were afore the steamship times. I just stowed myself in the ship's hold until one day the churnin' and the thumpin' got that loud that I was afraid, and came aloft to the deck of the ship."

After he got on deck, his narrative continues, the captain fell on him and gave him three lashings a day on his are back with unfailing regularity. This became so monotous that one day he fell on his knees and pleaded for his life and the Captain had a big cask rolled up out of the ship's hold, it's head was knocked in, a lot of food put into it, Patrick put into the cask, the head replaced and with only the bunghole open the entire cask and contents to look out of and the great green waves all around me.

'How did you get water?" "All the water I had to drink was what washed torough the bunghole." "And you like salt water?"

"Sure, it's only a matter of taste." After Pat had drifted many days and had begun to grow very fat from his inactivity, he one day felt the cask bumping on the shore and pretty soon was washed up high and dry.

With a certain naivete, he says that he had by this time begun to be sort of frightened. He saw no signs of life until after several hours some cows and bulls come roaming over the seashore, where they had come down to drink. At this point it is better not to question the taste of cows for sait water. One of the bulls came smelling around his cask, and playfully leaned up against the bunghole to rest. Pat gut out his hand and quietly pulled the ull's tail. Then he pulled it through, and, bracing his feet against the head of the cask gave the tail a twist.

The bull awoke. He looked around. The cask had him. With a snort like he wrath of Jove he started. Whew! How he ran. He bounded over the fields and hedges, into the streets of the city, past wharves and docks, past the Custom House, up to the He was in New Jersey.

English as She is Writ in Europe

A Boston musician who has been making a European trip ("carefully avoiding Bayreuth" in a malicious parenthesis which he puts in, in a note to the Listener) jotted down such examples of English defiled as amused him in his wanderings. Here are some of them:

Wall Street a Century Ago.

A walk down Wall street in those and one year before Washington was structive and amusing to the millionaires and speculators who now make it their headquarters. It was not then the great money center and main facfor in national finance that it now is, but only an unimportant side street leading down to fashionable Hanover square, and inhabited by small shop keepers and tradesmen, many of whom lived in more aristocratic portions of city. The buildings were small and dark, of wood and Dutch brick, and many had small gardens in front. Then as now Trinity church looked down the street and told the easy going New Yorkers the time of the lay, but it was a very different building from that which Old Trinity now

DON'T STARVE THE FRUIT TREES. -If any person were to chain an anibuilding, when, weathering a street mal to a stake in a field and leave it to corner, he split the cask in twain over shift for itself, then to watch the ania lamp-post, and I'at stood forth from mal until it gets thin and decreptd from his prison house of weeks, a free man, loss of flesh and strength, it is quite probable that the humane society would e after him with properly deserved punishment. Yet this is what thousands of farmers are doing with their fruit orchards, of course barring the difference between the insatiate tree and living animal. Like the latter the tree is chained to one locality and cannot go abroad for food, but fortunately it has no sense of suffering, or at least none that we can appreciate. And yet even for a tree there must be something akin to pain in the process of slow starvation-the seeking by exhausted rootlets of food that cannot be found. intending to give money or objects of it takes an enormous amount of various manures to form fruit and seeds, hotel against receipt, it can be granted The leafy part of the tree may mostly for. Leaving the room the P. T. come from carbonic acid gas of the Customers are requested to lock the atmosphere, but the stone fruits need a door and leave the Key at the hall por-ter. The P. T. People have colored ones for the petticoats. been looking in some direction when the flash comes and an intense action s produced on the centre of the retina. Naturally, after such a startling incident, all eyes are moved, and each person looks about to see what has happened. They look along the floor, up a wail, or toward a window, and then a spot of light, which is the persisting impression on the retina, accompanies

the movement of the eye.

The speaker believed Mr. Preece was right in speaking of the multiplicity of flashes of lightning, and the experimental evidence given by that gentleman was entirely borne out by what Sir William had noticed. In 1840, at Frankfort, he had noticed triple and quadruple flashes repeatedly. These occurred at such short intervals of time that there could be no doubt but they were somehow connected, and yet the interval was certainly long enough to show that there were several flashes. Since then he had frequently seen similar phenomena. Abercromby had said it did not seem to be a repetition of flash along the same course, but a succession of connected flashes, and to this the speaker agreed. It was a sort of breakng down along many lines and all over the place. Light had been spoken of as tending to induce flashes. It seemed actually put the air into a condition which is more easily disruptive than air which is not agitated by light, but that would not account for the time interval, and Sir William thought that something might be attributed to sound. The first flash does produce a tremendous disturbance in the air, probably causing a very per-fect vacuum in the place of the flash; and after this follows a knocking together of the air. It was difficult to account for an electric flash in the air otherwise than by supposing a crack in the air suddenly filling up, and that producing an exceedingly sharp elastic disturbance. It was quite possible that that elastic disturbance, propagated, at a rate nearly equal to the ordinary velocity of sound, to another place where the air is in a state of high tension, and ready to break down, would be

It was a most interesting subject, and night be easily investigated further by the aid of photography. Many in-teresting experiments had been made n the magnetization of steel needles by a helix in which there are electric cillations. Reiss found that when a Leyden jar is discharged through an insulated wire wound up in a helix in the ordinary way steel needles are found sometimes magnetized in the frection that would be expected from e direction that would be expected rom the direction of the main disharge and sometimes in the contrary irection. Lord Rayleigh had mentioned differences of direction of magnetization in different individis ready to serve. oals of a bundle of steel wires thus

FUREE OF CARROTS. - Scrape and of the fall wraps, and even for the cut three large carrots into slices, cover shortest garments, exposed to this kind of magnetizing with two quarts of cold water and simer gently three quarters of an hour. Put two ounces of suct in a frying pan, ing in one direction, and this followed and when hot, add a good sized onlon, sliced; cook until a light brown, and then add to the carrots. Press the current of a quarter of the original strength going in the first direction, and so on; then it might be whole through a fine sieve, return to the fire, and stir in two tablespoonfuls of corn starch, moistened in a little magnetized by the needle going cold water. Stir until it boils, add a palatable seasoning of salt and pepper, and a half pint of good milk. This is Figs. All Fils stopped free by Dr. Kline's Great Nerve Restorer. will send \$1.75 at once, can have the paper free to January 1, 1889, and for a full year om that date. This offer includes t ay numbers, for Thanksgiving Christmas, New Year's and Easter, all the Illus trated Weekly Supplements, and the An-nual Premium List, with 500 illustrations. Really a \$2.50 paper for only \$1.75 a year. A very interesting discovery was re-

cently made in the course of the excavations carried on by the French school at Athens, on the Island of Delos. Near the theatre of Apollo a private house was discovered, probably of the Alexandrian period. A court surrounded by pillars and twelve rooms have thus far been revealed. The floor of the court is of beautiful mosaic, containing flowers, fishes and other ornaments. A cistern filled with water occupies the middle of the court. The gates of the house and the street leading to it have also been dug out, and it is expected that an entire quarter of an ancient city will be brought to light.

The just completed mortality returns for England in the year 1881 give some cases of extreme longevity. Twenty-There are Trimble-Hawkins and his five men and sixty-six women were rebetween the beams of a floor, about wife. They are a handsome couple, gistered as 100 years old and upward Miss Charity Ball—Oh, yes, they are when they died, Nine of the men were 100, five 101, three 102, one, 103, 100, fifteen 101, eight 102, five 103, six 104, two 105, three 106, and three
