HEELING-IN .- Whether trees are to e planted in the fall or in the spring it is best to procure them in the fall and heel them in. "Heeling-in" is a two thirds of a cup) to make a mush, most important operation, and, accordand heel them in. "Reeling-in" is a ing to its being well or poorly done, it is of great benefit or results in loss. It is really a temporary planting, which with the right hand. Let the mush will preserve the trees for almost any desired length of time, yet allow them to be taken out whenever they are wanted for permanent planting. Select a high, well drained place, in light soil where water will not sattle, and free from weeds that may afford shelter to mice. The object is to place the roots and a portion of the stems in contact with she soil. A trench is opened, the head towards the south, of a width and lepth governed by the size of the trees. The trees are laid in at an angle of about forty-five degrees; one layer being placed, the roots and part of the stem are to be thoroughly covered with One soil. Then another layer of trees | tlar now that a good deal of attention is laid in, more setl, and so on; when all are in the trench and the earth so filled in that no air spaces are left Madras flowered muslin bed covers may among the roots, bank the earth up over and around them, rounding it up worked ones predominate. Some in well to shed water. As the trees are Roman sheeting have only one corner heeled in, use every care, by labels marking stakes or by record, to preserve the identity of the kind. When the trees are taken out for planting, there should be no difficulty or uncertainty about their names. This should green in the corner, forming the trellis, be kept in mind when placing them in but the tendrils and flowers extend to the trench. The trees are placed in a some distance. A bedspread recently sloping position that the branches may exhibited, and worked by an old womprotect those below them from the sun. | in, was of brown sateen, with a design If the weather is very severe and there is no danger from mice, the tops may be around the edge. A frill of light blue covered by leaves or other mulch. If pongee silk, about a quarter of a yard mice abound, heel in the trees erect, and bank up the earth well around the over that a fall of rather coarse lace.

ANIMAL NEEDS AT THIS SEASON .-Farmers in general think too little of the comfort of their stock. Our brute friends need warm stables, dry platforms and plenty of good food and drink. A farmer told me some time ago that bran at twenty dollars and cotton seed at twenty-six dollars per ton did not pay, and that cows are warmer without a platform than with He said he should feed only what farmer makes ten pounds of butter from the same number of cows that twenty-eight pounds a week, with a little bran, cotton seed and cob meal. On this principle it would not pay to buy flour for the family when they could subsist upon corn and rye ground at the nearest mill. A cow, if fairly well bred, likes nice food and will remunerate the feeder well. Stock should be cared for handsomely, if good profits are expected. A clean stable is destrable because the milking can be den more quickly, and because it is warmer.

(Ostroicskys magnifica) — The plant in the bottom of a with the above name has proved itself salt, put in more than the one given to it in honor of the Russian ellicer in command of the exploration party which discovered it. It was found in Eastern Boxhara by the son of Sir Begel, who is becoming as the discovery of the son of Sir Begel, who is becoming and making them known. This wonder among the Bell flowers, Compounded and shire and the son of the discovery of the son of Sir Begel, who is becoming as all the discovery of the son of Sir Begel, who is becoming as the first the discovery of the son of Sir Begel, who is becoming and making them known. This wonder among the Bell flowers, Compound and "certificated" by the Royal Russian R than the one given to it in honor of the plant is a hardy, herbaceous perennial, with stems about three feet high and tuberous roots. The ample leaves are and one half to five and three-quarters inches in diameter, of open bell-shape silver color as described by some, and by others as "white, dashed with purple and very beautiful." Our most prominent dealers in such plants inform us that they procured it on its first probably excussive heat, it did not

WILLOW cuttings can be made any mild day during winter when the twigs are not frozen. Use firm, healthy wood inches long, pack in sand, sawdust or soil, and store in a cool cellar until spring. If one half the money expended for Russian mulberry and hardy been invested in the planting and care of willows it would have provided a wind-break for every investor.

THERE can be no possible objection to feeding straw, but care should be taken to derive as large an amount of benefit as possible. It must be fed in such a way that a good grain can be secured with the stock. Wintering stock to keep it alive is one thing; wintering so that a good steady growth will be made another. In the one straw can be made to answer, in the other something else is necessary. In the one there is no profit; with the other a very fine profit may be secured.

THE knack of getting a supply of eggs summer and winter, is to keep the | cramp will vanish at once. pullets of the early spring and summer hatch. Feed them all they will eat second year, and keep none but young adapted for drawing room furniture, i hens. > and iron, will soon have effected an enamong the largest owners of sailing ships in America, building most of their vessels in St. John and vicinity. have just closed a contract in England for a sailing ship of 1,500 tons, to be built of iron. Wooden shipbuilding in Canada for several years has been a declining industry, and this last movement is regarded as a passage of its well-nigh final extinction. The socalled "soft-wood" ships of the Canadian Provinces were the cheapest that could be built, it being possible to put affoat in New Brunswick or Nova Scotia a vessel of this description fully equal in appearance to one built in Maine, and at a cost several dollar less per top. If, under such favoring conditions wood cannot compete with iron of rateel, Canada has but one alternative, if she would maintain her shipyards, of seeking materials among the products of the mine rather than of the forest. In this new departure builders in the United States have already got the start, and by a long distance. On the Delawaire river, convenient, to the iron and coal mines of the present year—five of them wholly the present year—five of the present year five of the present year five of the present year—five of the present year five of the present year five of the p Scotia a vessel of this description fully
