CULTIVATION OF CURRANTS .- As Cultivation of Currants.—As a rule currants are not cultivated at all.

They are planted in some out of the After she had said her prayers a few way place, or along a fence where at nights ago, and as her mother was prebest they can be cultivated or heed only paring to lower the gas jet, she said on one side. They are pruned spasmodically, or not at all, and soon be-come a tangled mass of weeds, dead of "Pigs in Clover.".—The Buffalo wood, moss-covered tranks, or branches with a stunted growth of shoots on top and the feeblest cluster of buds on the two-year-old wood. At best such a row of current-bushes can give only a corner, and a kind hearted gentleman poor crop of the smallest fruit. But after the currant-worm attacks them and strips off the leaves the currants wither up and are not worth picking. Currants should have as good cultivation as corn or potatoes, and this with superphosphate and nitrate of soda has a wonderful effect. The pruning consists in cutting out the old branches stripping out all the suckers (except two or three to be left to form new branches), the shorts or suckers about one-half,

The weaker they are the more should to make mixed up. they be shortened back, The best way to renovate an old row of currant-bushes is to set, out new ones where you can cultivate on both sides of the row. Meantime, if you do not wish to root up the old ones, give them a severe pruning, and either hos or fork the ground to kill the grass and weeds, or cover the ground thick enough grass and weeds; or, better still, sow there or four sames of equal parts of each lush. Scatter it broadcast on the land for a distance of two or three feet ! this is done in the spring the better, and it not done till the bushes are in full the brayes, as it sometimes burns them. Let, however, that these fertilizers are not substitutes for heeing or mulch mg. If the weeds and grass are left to grow they will take the lion's share of the nitrates and plessphates. But if you how or smother the grass and weeds the effect of the fertilizers will be very

PLANTING TREES.—The trees being simply heededdin, do not plant until the weather is settled, especially until the long wind storms are more of the Areopagus, because he flung away the bird which sought shelter in his bosom.

There are men in whom is no loads, which the roots cannot yet supply knowledgment. with morstone. If the trees come to heel them in until the weather gets warm. Science will open at Montreal August 27, and will close September 3. The week's session of the American Association begins September 3 at Philadelphia. The fact that the British delphia. The fact that the British delphia is time will give unusual interest to these cathered along the French Atlantic and Mediterranean coasts forty-two will receive electric lights immediately. The experiments show that when provided with the electric light the lighthouses on the English Channel and on the Atlantic coast will remain visible for at least ten these gatherings of English-speaking coast will remain visible for at least ten months of the year.

A Radical Cure for Epiloptic Pits.

To the Eddo-Picase inform your readers that I have a positive remedy for the above named disease which I warrant to cure the worst cases. So strong is my faith in its virtues that I will send free a sample bottle and valuable treatise to any sufferer who will give me his P.O. and Express address. Respy.

B.G. ROUT, M. C. 183 Pearl St. New York.

The forces in the sum accummulate and the forces in the sum accummulate and He is a true friend who warns of as it were, boil over at recurring periods the forces in the sun accummulate and, with the same irregular regularity as the spouting of a geyser.

> Rust.-To remove rust from tools, first scour them with emery moistened with sulphurse acid diluted with six volumes of water, riuse dry, and finish with oil and emery flour
