

IN THE FLOWER GARDEN.

"Rich is the pink, the big eye... The rose is the flower of the year... So says the poet, but, with our modern ingenuity and facilities, we have also gained the knack of making our loved flowers bloom even in the winter.

Hyacinths and freesias and many other bulbs can be treated in the same way. Put at different times, leaving them in a cool cellar, after they have been started from four to six weeks bringing them up to a temperature of 60 degrees.

Among all our houseplants none are better adapted to the amateur's wants than the Abutilon, says Eben Rexford in the Ladies Home Journal.

It is what might be called a perpetual bloomer. It is true that some varieties do not bloom so profusely as the Geranium, but the steady succession of flowers more than makes up for what it lacks in quantity.

A little judicious pinching back now and then to induce bushiness and make the plant compact is about all the treatment necessary to secure a good plant if you give it a rich soil and plenty of sunshine and air at the same amount of water that you give a Geranium.

Several branches will start along the stalk. Keep all rubbed off except those near the top. When they have grown five or six inches, pinch the ends of them off, and keep up this pinching process until you have at least a dozen branches started near the top of the stalk to form a head for your proposed tree.

When they become straggling, awkward specimens which no amount of subsequent care can bring into good shape, if you prefer a shrubby plant, with branches from the bottom, you must begin the pinching at a higher point when the main stalk is not more than six inches high.

For those who have plenty of leisure to spend among their plants, it is a fascinating pleasure to experiment with them, hybridizing and combining to obtain new forms and colors.

DECEMBER.

December half the mill, the vale... December half the mill, the vale... December half the mill, the vale...

SOUPS, SALADS AND THE LIKE.

Paro one medium sized turnip and scrape one large carrot and cut both in thin slices. Put two tablespoonsful of butter in a frying pan, and when hot add an equal amount of chopped onion and fry carefully to a golden brown.

Tomato sauce is excellent with roast mutton, lobster chops, mutton hash and many other dishes and will keep a long time.

Macaroni with tomato sauce. Tomato sauce is excellent with roast mutton, lobster chops, mutton hash and many other dishes and will keep a long time.

Chicken salad. Pick the meat from the bones in shreds, add half as much celery, cut fine and pour over a mayonnaise dressing.

Delicious turkey hash. Pick dark and light meat from turkey bones and chop it fine. Butter a pudding dish and put a layer of fine bread crumbs, then a layer of oysters that have been plumped and chopped a little.

Cream of rice soup. Wash half a pound of rice and put it over the fire in a quart of chicken broth and cook an hour in a double boiler.

Care of kitchen sinks. Comparatively few kitchens are ventilated except by opening the doors and windows (which is usually done as a relief from extreme heat) and at this season of the year there is little necessity for this.

Blue roses. For those who have plenty of leisure to spend among their plants, it is a fascinating pleasure to experiment with them, hybridizing and combining to obtain new forms and colors.

How they got rich. She-I could have married either Whipper or Snapper if I'd wanted to, and both of these men are whom I refused to have since not rich, while you are still as poor as a church mouse.

KOSSUTH IN EXILE.

An Italian correspondent writes: I was in 1856 that Kossuth, trusting in the promises of Louis Napoleon to obtain the recognition of the independence of Hungary from the Austrian Emperor, came to Turin. We all know what then happened. In this city, or near it, he has ever since remained.

For many years Kossuth's only desire has been to avoid publicity and he has led a life of complete retirement, receiving only those visitors against whom it was impossible for him to shut his door.

When a deputation from Hungary came to confer with him about home politics, the grand old hero, who had moved, and being unable to say good-bye to them all individually, he embraced the spokesman, saying: "Take this kiss to my dear country from the old man who lives her well."

The warning comes from Boston, Mass., that fast elevators in big buildings are productive of heart disease.

Some useful hints. Unless one has exceptionally careful and efficient servants the housewife should know that all glass fruit jars are properly cleaned and dried after being used.

Distress After Eating. Indigestion, Nausea, Sick Headache, Dyspepsia, Heartburn, etc., Are cured by Hood's Sarsaparilla.

SPRINGS.

Many people who are sick to treat a spring as a matter of slight consequence, when in reality it is usually a very serious injury.

The severity of the injury varies. A severe sprain, while continuing no element of danger to the life of the patient, is, nevertheless, a serious injury, which may result in the permanent impairment of the functions of the joint.

The very first item in the treatment of a sprain is perfect rest of the limb until a surgeon can be summoned.

Reduce the swelling by applications of hot fomentations as often as once in three hours. If a piece of rubber cloth be not at hand, use common newspaper, wind it on carefully, outside the hot cloth, this will prevent the escape of steam and keep the cloth from cooling.

A good way to prevent the hands from being scalded is to place the hot dripping flannel in a towel, then, taking hold of each end of the towel, wring it until the flannel is dry enough to apply.

Avoid violent movements of the joint or some weeks after the injury. If the joint become stiff, move it gently each day, also rub gently with some stimulating liniment, such as ammonia liniment.

In some cases serious disease of the bone may follow. This is the result of the original accident, and cannot be averted by treatment. In any case, however still until the injury is repaired.

Economy in It. The slowest walking horses in the world are to be found in Germany. They are trained to a slow gait on the theory that the slower they move the longer they will keep their flesh.

Parrot—"And so Mrs. Gadabout is really 40 years old? She doesn't show her age." Wags—"No; she keeps it to herself."

How He Hurried Old Andrew.

When the fire spluttered after breakfast at the Elm House, John P. Swasey and the rest of the "boys" got to telling yarns. Somebody said that this was a tough morning for stage coaching and Swasey had a story.

He knew Andrew Dorr who used to drive over to Strickland's through Brettun before the railroad came our way. I think I was the only man who ever hurried him and that was done with malice afore hand.

He was bound to save his horses if he killed his passengers and so he used to time them by every stump-fence, snow drift, barn yard and pine tree and never hurry them. It was a cold morning, once, when I wanted to go over to Strickland's so as to come down twelve miles, if I knew it, so before I went, I set my watch ahead forty minutes.

All the way to Brettun I impressed on Andrew, as I took a seat by his side, the immense importance of my being at Augusta that day.

"I'll git ye there," said he, "I never missed a train yet. I know just where I be, always."

Well, he did, and I said but little until after we got to Brettun's, not daring to pull my watch on him for fear he would discover me by the clocks at Brettun's.

Brettun's, I kept at him for about ten minutes, and then said: "You can't get me there. What time are you?" He pulled his watch—a small, cheap one, but a good timer, I guess.

"You're too slow, man," said I. "Forty minutes slow. You've got to rump." He put his watch to his ear, shook it and rattled it. "Never knew her to stop," said he. "Allus been a good watch. That's a good watch o' yours, I suppose?"

"Yes," says I, "a good watch." Andrew came to a decision at once. The braid fell on the sags and they sprung to life, and the way we whisked into the ferry was a caution, the horses steaming like hot teakettles. When we got there we had fifty minutes to wait, but it was in a warm room.

"We are organizing a piano club? Will you join?" "Cheerfully! What pianist do you propose to club first?"

"Where's Blithers? I've been looking all over for him." "Did you look under Mrs. Blithers' thumb?"

"We have no use for bear stories," said the editor, "our readers demand something spicy." "Well," said the man with the manuscript, "this story is about a cinnamon bear."

"I looks now as if the weather had settled." "Lan-lady—Yes, it has set a very good example."

"Do you think you stand up under misfortune?" "Yes—If I've never proved that you, too, are no lawyer."

"We have no use for bear stories," said the editor, "our readers demand something spicy." "Well," said the man with the manuscript, "this story is about a cinnamon bear."

"We have no use for bear stories," said the editor, "our readers demand something spicy." "Well," said the man with the manuscript, "this story is about a cinnamon bear."

HUMOROUS.

Over herd—The shepherd. The dyer can easily hue to the line. An Inspector of Customs—The curling traveler.

The crack shots of the country do not lead an aimless life. A man's declining years begin at fifty; a woman's begin from fifteen to eighteen.

Nothing is so certain as that lying does not pay, but there is a great deal of it done, all the same. When a genealogical tree has many branches the descendant should keep study about it.

Your views meet with my approval, said the customer, as he brought some photographs from a dealer. Never disturb a contemptible man. It is never safe to approach too near a train of thought when it is in motion.

It is easy for a girl to fall in love with a man, but when she has to support him by taking in washing—ah, there's the rub. Mr. DeBullion—What a peachy complexion Miss Prentiss has. Miss Beattie (a rival belle)—Yes, isn't it awful? Just full of fuzz.

A HOPELESS CASE. He—"What way shall we go home?" She—"The shortest." Then he gave up all hope.

"We are organizing a piano club? Will you join?" "Cheerfully! What pianist do you propose to club first?"

"Where's Blithers? I've been looking all over for him." "Did you look under Mrs. Blithers' thumb?"

"We have no use for bear stories," said the editor, "our readers demand something spicy." "Well," said the man with the manuscript, "this story is about a cinnamon bear."

DONALD KENNEDY

Of Roxbury, Mass., says Kennedy's Medical Discovery cures Horrid Old Sores, Deep-seated Ulcers of 40 years standing, Inward Tumors, and every disease of the skin, except Thunder Humor, and Cancer that has taken root. Price, \$1.50. Sold by every Druggist in the United States and Canada.

Headache is the disorder most complained of now-a-days, and against which the greatest number of the so-called home remedies are applied. In most cases, however, they are of no avail, because, as a rule, the headache is produced by a disordered stomach and consequent impurities of the blood which causes a congestion in the head.

A feeling of dizziness, languor, and depression means that your liver isn't doing its part. That means impure blood, to begin with, and all kinds of ailments in the end.

But you can stop them in advance. Dr. Pierce's Golden Medical Discovery invigorates the liver, purifies and enriches the blood, and rouses every organ into healthy action. It prevents and cures all diseases arising from a torpid liver or from impure blood. Dyspepsia, Indigestion, Biliousness, Scrofulous, Skin and Scalp Diseases—even Consumption (or Lung-scrofula), in its earlier stages, all yield to it.

The makers of the "Discovery" claim for it only what it will do. They guarantee that it will do it. If it fails to benefit or cure, in any case, they'll return the money. Nothing else that claims to purify the blood is sold in this way; which proves, no matter what dealers may offer, that nothing else can be "just as good." Therefore, don't accept a substitute.
