

GETTING EVEN WITH THE LAND-LORD.

We'll crack the windows, mark the doors, and turn everything inside out. We'll make the paper of the walls a little prettier. We'll make the house present an awful picture.

We'll damp the ashes in the hall; we'll close the water pipes. We'll break the ceilings and the walls in view, fantastic style.

We'll break the knees and latches all the house work. For that is how the people do who move the first of May.

The place we leave behind us will be awful to behold. An air of wreck and ruin will be the promise given. No other can awaken such a depth of dark dismay.

Except to be the house to which will move the first of May.

FAITHFUL PETER.

One beautiful moonlight night two men stood in a grove of liveoak trees which grew on the eastern banks of the St. John, a short distance back from the river.

One was undoubtedly a man of wealth, and by his dress, a planter of the neighborhood. He wore a suit of spotless linen; boots, the tops of which reached above his knees, while his head was covered with a broad-rimmed Spanish sombrero. He was rather corpulent in build, and his entire carriage betokened that he had never wanted for the comforts and luxuries of the life which he led.

His companion presented a striking contrast. He was shabbily, yet even slovenly and scantily attired, and the coarse garments hung upon an attenuated frame which seemed scarcely able to support his head.

The face was drawn and pinched, and stamped with an idiotic and somewhat sinister expression. He, too, wore a broad-rimmed hat, but it was made of straw, and it looked as if it were about to fall off his head.

His feet were uncared for, and he wore a pair of worn-out shoes. He had a look of a man who had been through a great deal of trouble, and who was now trying to get even with the land-lord.

"It is a ticklish piece of work I am about to perform, Ephraim, but I know that you possess the courage to carry it through, and as it requires no great physical exertion, those aque-shaken limbs of yours will prove equal to the occasion."

"I don't know what you mean, Squire, so as you say well and I don't run no risk. I ain't skeered considerable of 'gators an' snakes an' such things as crawls about in the swamps, nor much about niggers, but the Sheriff, Squire, when I think of him, my bones shake an' rattle to gether like coffee beans in a dry pod when the wind's a-blowin'."

"You need have no fear of the Sheriff," replied the planter, "for I shall give you money enough to take you out of the county, and for that matter, out of the State when your work is done. Now, listen, Clayton Carroll, my half-brother, is a rich man—in fact, he is enjoying prosperity which by rights is as much mine as it is his, for we were born by the same mother, but his father happened to be wealthier than mine. All that money, which is rightfully mine, is now in the hands of that scoundrel, the Sheriff."

"But I heard," broke in the Cracker, "that you an' the Colonel was good friends, and that you would give a pile of money when he died."

"That may be true, but the other, grimly, "but while one is waiting for a dead man's shoes his feet may become sorely blistered. I'll tell you, Ephraim, I went on the stock villain, assuming a confidential manner, that greatly flattered his ignorant and low-born companion. I have lost heavily of late, in fact shall be ruined unless my prospects brighten immediately and confidence is restored in my financial standing."

"Why don't you ask the Colonel to let you have a little money?"

"I have asked him for too much already, and know that I should be refused."

"Well, what do you want me to do?"

"Kill him," hissed the villain.

"That's what I said. Surely you are not afraid to do such a piece of work, I will know that you are the first job of the kind in which you were concerned."

RUSSET ORANGES.

Not a Separate Variety, but Shown by Its seeds.

Shrewd orange shippers in Florida, says the Fruit Grower, make a virtue of necessity, and brand their rusty oranges with such fancy and attractive names as "Golden Russet," etc. Most consumers, and many Northern growers, are misled by the name, and buy a separate variety of fruit. At a recent meeting of the Florida State Horticultural Society, Mr. W. A. Marsh read a paper from which we take the following account of the rust nut:

"This minute insect which is visible to the naked eye, is a great source of annoyance to the orange grower, and causes a loss of thousands of dollars each year to the growers. The rust mite is only the 1/100th part of an inch long. The eggs are deposited singly on the clusters over the leaves and hatch in four or five days. In about ten days they shed their skins, and reach the adult condition, which differs from the young in being a little darker. It is during the hot, moist weather in the summer when they become most abundant, and on dry weather checking them. One examination on a single leaf estimated a number of mites and eggs at 75,000. These little creatures are able to travel twelve feet per hour, so they are able to cover a good deal of space in a short time. The result of the little fellow's work is not altogether pleasant, our rusty fruit will carry a good deal better than the bright and late in the season there is not much difference in price. The russet fruit holds its juices longer than the orange, and the orange, and other citrus fruits."

The Brute and the Lady.

Sleighs drawn by four horses are employed on the Washington route. The heavy loaded sleigh was coming cityward. One of the horses near it with his whip. Then he kicked it. Finally he swore at it. But he did not get out of the harness. The animal from the harness which held it a prisoner. The men in the sleigh buried their chins in their overcoats and indulged in contemplation of the situation, a philosophy which remained unbroken from the start to the end. Suddenly a lady, clad in a sealskin gaiter, got out and going up to the driver, she said in an imperative tone: "Get out of this harness, and get down from the sleigh, and get out of the harness. Now, if you touch that horse again I will let you feel the weight of this whip across your shoulders, and I will do it down this moment, and cut the harness and help the horse to rise."

She then turned to the driver and said: "The women in the sleigh, the men hung their heads. The lady, shaking the whip over the driver. The harness was loosened, the horse was raised to his feet. The driver got out of the harness, and treated the whole four horses to one each. The effect was magical. The horse class cynics of their poor faces gave place to hope and joy and gratitude. Then the lady, very white and as resolute as Joan of Arc ever was, entered the sleigh. The men still hung their heads in silence.

Montreal Star.

Ostrich Farming in California.

The wild camel in the Arizona desert, supposed to be a descendant of a good deal, and there seems to be strong foundation for the report that these beasts are occasionally seen like ghosts on the line of the Mojave. The story that a small flock of ostriches is running wild in the Mojave Desert in Southern California, for several experiments in domesticating the South African bird have been made on the Pacific coast, and are still being tried. The wild birds were originally imported and placed in corral by an enterprising breeder who did not take the precaution to build his fence high enough. One morning the ostriches stamped, jumping the fence and we never again rounded up. Mexicans in possession of the very night, and I hurried along and I speak I didn't get here too soon.

A close examination revealed the fact that he was not mortally or even seriously injured. Pete's bullet had grazed the skull, and merely stunned his intended victim.

By the Colonel's orders the miserable creature was conveyed to the house, where he soon recovered consciousness, and finding that his wicked plot had gone astray, he confessed all, and like his accomplice, sued for mercy.

Clayton Carroll could not find it in his heart to prosecute the son of his own mother, but with tears in his eyes, rebuked him for his inhuman act, and forgave him.

A good man, day forward Abijah Jessup was a changed man, and the two brothers long lived happily together. Ephraim, the accomplice, was also forgiven, and provided with means to go on his journey.

But the faithful Peter was the hero of the family, until at a ripe old age he was gathered to his fathers.—Yankee Blade.

James McCloud of South Dakota, has raised a horse which has eight perfect hoofs, two on each leg.

A red-skinned fraud is being exhibited at the Antwerp Belgium exhibition as Setting Bull.

Every man who takes part in you expression expects in return that you will some day blow a horn in the band in his procession.

The greatest geysers in the world are the Yellowstone National Park.

Farm Notes.

Artichokes are excellent food for swine, and especially for pigs and hogs that are growing rapidly. If the pigs are to be allowed to gather the artichokes for themselves, then the artichokes should be planted on rather light soils, because in rooting over the soil to get at the tubers the ground will be made more compact by the constant turning up of it, with the gathering of the crop, during the wet weather late in the fall and early in spring. This working over of the soil by swine will greatly improve light soils, but will injure heavy, tenacious clay by making it more compact.—New York Sun.

GROWING PANSIES FOR PROFIT.

The culture of flowers in one of the most profitable lines of this kind of industry, and at fifty cents a dozen for pansies, the profit will be very satisfactory. To have them early, the seed should be sown at once in boxes in a warm room, and the seedlings plants in the open ground in the fall, the flowers may be had earlier. The most desirable way is to sow seed in the summer in the open ground on rich soil, and get the young plants, picking off the weeds, until the middle of the winter, and in time to have the flowers when they are wanted. Then by gathering the flowers as soon as they are fully blown the plants will continue to bloom a long time. To get good watered with weak manure water. The finest varieties are the Imperial German and Scotch.—New York Times.

REPEATING AFTER OTHERS IN THE SEASON.

The time for destroying the apple worm is immediately after the petals fall, and the spraying should be repeated once or twice after the apples begin to hang down. Experiments by E. G. Lederman at the New York College of Agriculture indicate that the first application of fungicides should be made soon after the buds open and just before the flowers fall. Apple trees should be so pruned that both the sunshining and summer pruning should be done. The Bordeaux mixture reduces the injury done by the apple scab fungus. The addition of Paris green to this mixture gave better results than when London purple was used. More spraying applications are required to control the trees should be sprayed once a week during wet weather. The results show that the application of the combination of the Bordeaux mixture and Paris green is the most effective. This is valuable and practicable for the treatment of the apple scab fungus and the apple worm even during four or five inches of rain fell during June.—American Agriculturist.

SELECTING A COW.

The good points of a good cow are not her good looks. She may not be and probably is not very good-looking except to the eye of an experienced dairyman. She certainly is not fat and she certainly is not to be rejected on account of her looks. The cow that should never be lost sight of is the one that will give the most milk in the least amount of time. She should be a good milk producer, and she should be a good mother. She should be a good milker, and she should be a good mother. She should be a good milker, and she should be a good mother. She should be a good milker, and she should be a good mother.

LAWN GRASS.

Where the locality is desirable for a lawn is naturally first from weeds the modern suggestion of making it by planting patches of one particular kind, which will run together in a few months, is particularly desirable. Nothing is better than to plant a lawn with a mixture of grasses. For small gardens, especially where the lawn is to be hand-weeded during summer, it is the best of all methods. No lawn made of grass seeds will be better than a lawn made of a mixture of grasses. For small gardens, especially where the lawn is to be hand-weeded during summer, it is the best of all methods. No lawn made of grass seeds will be better than a lawn made of a mixture of grasses.

THE LAMP USED BY EPICTETUS.

The lamp used by Epictetus, the philosopher, sold for 3,000 drachmas soon after his death, in the year 161, A. D.

Sun spots were first observed in 1611, and were then noted by several astronomers at about the same time.

THE LADIES.

The pleasant effect and perfect safety with which ladies may use the California liquid laxative Syrup of Figs, under all conditions, makes it their favorite remedy. To get the true and genuine article, look for the name of the California Fig Syrup Co., printed near the bottom of the package.

What Do You Take Medicine for? Because you are sick and want to get well, or because you wish to prevent illness. Then remember that Hood's Sarsaparilla cures all diseases caused by impure blood.

Fully vegetable—Hood's Pills—25c.

Dr. Kimer's Sarsaparilla—25c.

Hall's Catarrh Cure.

It Is Not What We Say

But what Hood's Sarsaparilla does that tells the story. The great volume of evidence in the form of unnumbered, voluntary testimonials prove beyond doubt that

Hood's Sarsaparilla Cures Hood's Pills cure habitual constipation.

Let the fowls out when the weather is mild. One-fourth Leghorn blood hastens maturity. Broilers early in spring sell at very high prices. Grade your dressed poultry in packing for market.

The Beder Wood is a strawberry worthy of trial. Skim milk thickened with bran is a good food for poultry. In nearly all cases it will be best to keep the milk gradually.

If the hay is the least musty, always moisten it before feeding. The poor, unwhitened hog is often the prey of vermin or parasites. The more time required to fatten an animal the greater the cost.

If farmers want to make buttermilk profitable they must make a good article. Horses should not be tied too long, as they are apt to roll and get cast in the stall.

Many modern growers use commercial fertilizers instead of manure for potatoes. Milk may be deficient in solids without having water added to it by the milkman.

A nervous, irritable, bad-tempered driver generally has nervous, vicious, runaway horses. Too long for the cream to rise and too long without stirring will make white specks in the butter.

With a thoroughly good cow one can always afford to give plenty of feed in exchange for plenty of butter. The most profitable cow is the best mother, and the mother function should be fostered as much as possible.

While feed has much to do with the quality of the milk, the breed of the cow has much more to do with it. Now that work is on, be sure the collars fit perfectly before beginning work. It is often easier to prevent than to cure galls.

Farm horses should be groomed at least twice a day in the working season, especially if they have been sweating or have been in the mud. A farmer who has a quarter-section of land should set five or ten acres of orchard trees. They will get him out of debt if he is in and help him to keep out if he is not.

An orchard can be successfully grown without interfering with the rest of the farm work, and time thus spent will bring returns equal to any other product. It has been proved.

It is claimed by some horticulturists that winter pruning while the sap is down develops vigorous wood growth, and summer pruning checks this and encourages fruit production. A word of caution is due to those who embark in any new enterprise. There are many things to learn. Books have a value to the new beginner, but practice is necessary. No man should fail to learn the practical details by using his own hands.

Are sheep subject to indigestion? Of course they are, as much so as any other animal. Did you never smell a sheep's breath? Some of the healthy sheep's breath is as sweet as an infant's; but a diseased sheep's breath suggests indigestion and all the ills known to mortal flesh.

Joseph Meehan gives a way to rid plum trees of the curculio: "As soon as flowering is over spread a sheet under your trees and jar the trees, bringing down the pest and the fruit, which burn. Do this daily until the fruit is one-fourth grown. If rightly followed it insures a crop."

The lamp used by Epictetus, the philosopher, sold for 3,000 drachmas soon after his death, in the year 161, A. D.

Sun spots were first observed in 1611, and were then noted by several astronomers at about the same time.

THE LADIES.

TO HEAD OFF THE HOTEL BEAT.

Returned Their Own Funds.

Several years ago, when the great Johnstown disaster aroused the whole country to pity and benevolence, the fund of Brooklyn raised a relief fund of several thousand dollars. Of this no small part was contributed by the laboring classes and those dependent upon salaries. It appears that not all of the amount contributed was needed, and the balance of \$3,000, which now remains in the bank to the credit of the relief committee, will be used for the unemployed poor of Brooklyn itself.

A 70-year-old woman of Newark, N. J., some time ago married a dapper youth of 23. She thinks she needs but one thing more now to complete her happiness, and that is a divorce.

SEVERE EXPOSURE

Often results in colds, fevers, rheumatism, neuritis and kindred derangements. We do not catch colds if we are high colored.

A Renewed Danger.

Last year party and press, irrespective of party or locality printed an earnest attack upon the Louisiana Lottery as a source of danger to public morality and of political corruption wherever it came in contact with State or city affairs. It was announced that the Lottery Company had bowed before the storm of public opinion, and would not ask a renewal of its charter. A great moral victory seemed to have been gained.

But now it appears that the company has only retired to renew the fight from a distance. It has bought an island in the Bay of Honduras, and may almost be said to have bought the Honduras government also—so extensive are the concessions made in return for a million dollars in gold and a large percentage on all tickets sold.

One might at first thought rejoice in the removal from our shores of this great evil, whose concession to many millions of dollars have been drawn, dollar by dollar, from almost every village and city in the United States; but it is certain that its intention is still to subsist on this country.

International postal laws will permit it to deluge our mails with sealed circulars. Even now, despite the disguise of advertisements thinly scattered among all over the country. A law making the sending or receiving of lottery tickets—whether by mail, express or otherwise—a penal offense has been proposed, and might meet the danger. That some stricter control than now exists is needed is beyond question.

To learn what ruin follows in the track of a great lottery read the accounts of the Panama Canal scandal in France; note that the Hawaiian lottery followed closely after a lottery bill had been adopted, and mark the poverty and degradation of the Italian lower classes which yet spend \$10,000,000 yearly in the national lottery.—Youth's Companion.

The Weight of Compact Bodies.

The load which is produced by a dense crowd of persons is generally taken at eighty to 100 pounds per square foot and is considered to be the greatest uniformly distributed load for which a floor need be proportioned. That this value may be largely exceeded in actual crowd conditions is pointed out by Professor W. C. Kernet, of Melbourne University, Australia, in a recent paper before the Victorian Institute of Engineers, copied into Engineering News, in a study trial of a crowd of students averaging 137.5 pounds each in weight were crowded in a lobby containing 18.23 square feet, making an average floor load of 134.7 pounds.

There was still room to have placed another man, which would have brought the load up to 143.1 pounds per square foot. Professor Kernet also quoted from Stoney, who placed fifty-eight laborers, averaging 145 pounds each in weight, in an empty shop measuring five-seventy square feet floor area. This was a load of 147.4 pounds per square foot. In another test, with seventy-three laborers crowded into a hut nine feet by eight feet eight inches, Stoney produced a load of 150 pounds per square foot and estimated that two or three more men could have been squeezed in. It appears from these experiments that while the figures ordinarily assumed of eighty to 100 pounds are sufficiently correct in actual crowd conditions there is no cause to induce the collection of great crowds, larger figures, say 140 to 150 pounds per square foot, should be used for railway stations and platforms, entrances and exits to places of public assembly or office buildings, promenades, pavements over vaults and other places where dense crowds are likely to gather.

The Modern Style.

"I wonder," said the old duster, "if the old stock company methods will ever be revived?" "Stock company?" responded Mr. Barnes Torner, "why, we are going out on the road next season with a company composed almost entirely of stock—three horses, a dozen hens, two goats, a calf and two pigs."—Indianapolis Journal.

Spiders have been known to spin nearly two miles of thread in twenty-seven days.

Live fishes have been safely sent by mail from India to the British Museum.
