Every one who has had occasion to ansalt the cumbersome old encyclopredias for some needed information, effectually concealed in some long article. will be glad to know of the appearance of a new general reference work built along different lines, so that any child who can read may successfully consult

Such a work is The New Standard quarto volumes, and which embraces the substance of all the other encyclo-Mr. David Sieber and his daugh. padias, besides a very large amount of new up-to-date matter none of them contain. It introduces a vast number of new words, names, facts, ideas, inventions, methods and developments. which is from 6,000 to 10,000 more than any other work. The publishers of the "Standard American" have also lavishly c:abellished the new work. There are over 2,500 illustrations, which cover every conceivable subject, lending new interest to the descriptions, and forming contains over 300 colored maps, charts, encyclopædia has undertaken to present.

and study. The professional or business man, whose time is money; the teacher, who is called upon to at once answer all sorts erence books which would cost many times the price of this.

3 Another feature in which the new work stands absolutely alone, is in its very full appendixes, which embrace over 100 subdivisions, including a Biographical Dictionary, a Dictionary of Technical Terms, a Gazeteer of the United States, Presidential Elections in the United States, Religious Summaries, State and Territorial Election Statistics, Statistics of the population of the world. and a veritable mine of information on thousands of subjects of universal interest and importance.

But it is in its treatment of recent subjects that the Standard American will be found of paramount value. All other encyclopædias are from five to ten years old, and are silent regarding hundreds of topics that every reference work should contain. Such, for instance, as "The X-Ray," "Argon," "Horseless Carriages," "The Atlanta Exposition," "Color Photography," etc., etc. It also gives biographies of hundreds of people who have lately become famous, such as Prof. Roentgen, discoverer of the "X-Pay," Ian MacLaren, Dr. Nansen, the explorer, Rudyard Kipling, etc., etc., On account of its lateness in all these matters, as well as its accuracy, it has become the standard in Schools, Colleges, Courts, Public Libraries, and wherever important questions come up for discussion.

It would therefore seem that no prefessional man, artisan, mechanic, teacher, pupil, or farmer, can well afford to be without this most useful, practical and latest of all encyclopædias, especially as its price has been so arranged as to make the work a great bargain; and render its possession possible to almost any one who earnestly desires to own it, Detailed particulars regarding the work and how to secure it at practically your own price, may be found in an advertisement on another page of this Bargain Days
