The Daffodil.

It is now many centuries since, according to Ovid, the young man Narcissus was changed into a daffodil because of his pining away from seeing his lovely shadow in the water. But it can hardly be from sympathy with the unfortunate youth that the flower has continued to be so popular during all these long ages. Certain it is that it has as high a value today in the gardens of persons of taste as in the flower plot of the bumblest cottager. No garden is considered to be quite complete without its little patch of daffodils.

Of late years florists have given attention to raising varieties from them, and the record of their many forms is a feature of the catalogue of all seedsmen. Double ones formerly carried off the paim for popularity, but in recent times the single variety is regarded as quite as desirable. - Mechan's Monthly.
