by those who have used it, and by the most experienced bee-keepers. It has three protections against the bee moth:-Ist, the bottom is iron, so that the egg will not hatch under it. 2d, it is so constructed that the worm cannot crawl above the bottom box, if the egg should hatch. 3d, the room can be increased or diinished, by removing the drawers arranged upon the sides, and turning the bees in upon the centre, sufficient to keep the comb covered with the bees all through the season, and the bees will protect
