

AGRICULTURAL.

MONROSE, FEBRUARY 20, 1851.

Improvement in Agricultural Implements.

The CULTIVATOR or HORSE HOE, was introduced into England by JETHRO TULL, more than a century ago. It has been of considerable importance in lessening the expense of cultivating any crops, as well as increasing the yield. By using this implement instead of the plow in the cultivation of Indian corn, potatoes, turnips, and other root crops, much less labor is required with the hand hoe; and the cultivator has, in fact, taken the place of the plow to a great extent. Besides the saving of labor in cultivation, which this change has effected, an advantage derived, on the drier class of soils, from the better situation in which they are left by the cultivator—it leaves the surface comparatively level and less exposed to be dried by the sun and air than when thrown into ridges by the plow.

The cultivator has been greatly improved in its construction within a few years. Steel has been substituted for cast-iron for the teeth or feet, which, for stiff soil, is of much advantage—cast-iron teeth being only fitted to work in soils of the loosest description. The increased length of the teeth which some manufacturers have added is of importance in enabling the implement to do thorough work among weeds and grass without clogging.

A form of this implement called the "field cultivator," has been adapted to working fallows and preparing ground for the reception of seed. It is very useful for this purpose, executing the work with despatch, and leaving the soil loose and friable. A man and a pair of horses with one of these field cultivators can thoroughly work over four times as much ground in a day as could be plowed with the same team, destroying the weeds (unless they are very large) quite as effectually as would be done by any implement.

The DRILL-MACHINE.—It cannot be claimed that this is a modern invention, as a rude article for depositing seeds is known to have been used by the ancient Egyptians. A general use of the drill however, has not prevailed in Europe or America till a late day. The credit of its introduction into England belongs to TULL, who regarded it rather as an auxiliary to the "Horse-Hoeing Husbandry," of which he was the originator. His first drill was constructed in 1701; but this appears to have been only designed for clover and lucerne, and it was not till thirty years afterwards that he obtained a patent for a machine for sowing wheat, turnips, &c. Little progress appears to have been made in the use of the drill till 1782 when by the exertions of the Bath and West of England Society, attention was generally called to the importance of drill husbandry, and various improvements were made in the implement. Its advantages have since been considered of such great importance, that it has been pronounced the sheet anchor of English wheat-husbandry. In reference to the benefits which were attributable to TULL on account of the introduction of these implements, it has been remarked:—

"His drill and his horse-hoe, have saved his country in seed alone, the food of millions," and used as a distributor of manure it has done and it will hereafter accomplish still greater things. It has brought into cultivation thousands of acres of barren Craig of Norfolk, and its powers are not yet nearly exhausted, for as fresh fertilizers are discovered, the drill even and economically distributes them, and as improvements in its construction are continually taking place, there is evidently much yet to be achieved by its use.

The hand drill has been used in this country for several years, but its use has been confined mostly to garden cultivation and root-crops. The introduction of the field-drill in American husbandry is quite recent, it having been scarcely known ten years ago. Its advantages here appear to be fully equal to those which have been realized in Europe; they may be summed up as follows:—

- 1. It saves seed; 2. It distributes the seeds with greater regularity than it can be done by hand; 3. It deposits the seed at any desired depth, and insures speedy germination; 4. It affords an opportunity to destroy weeds which infest the crop; 5. The crop receives the undivided benefit of the soil; 6. By the admission of air between the rows, a stronger plant is produced and a heavier crop is obtained; 7. In reference to wheat and other grain, the crop is liable to the blight of mildew; 8. Fertilizing substances may be deposited with the seed, by which the crop is more largely benefited than it can be by any other mode of using manures; 9. It protects grain against winter killing.

"The drill" has been greatly simplified in its construction, and cheapened in price, by our mechanics. With a good machine, a man and a horse will sow eight to ten acres of wheat in a day.

The place for Orchards.

A friend asked us the other day, what is the best situation for an orchard? As a general answer to him we would say, where you can raise corn. There is no requisite that should not be overlooked in choosing the site for an orchard. It is this, the land should be well-drained. Flat lands where the water stands, however rich they may be, are improper for an orchard, as the apple tree will not flourish with water about its roots. Hence the slope of a hill eminent to be fitted for an orchard. It does not make so much difference which point the orchard lies on, as many suppose, if the land be good. You will find orchards, and every good orchard too, on all sorts of hills, and on the very pinacles of some of them. The eastern slopes are generally the best, as earlier in the spring, and when they are subject to South-east gales in the fall, sometimes knock the apples off at a sad rate. Let no farmer be

without an orchard because he does not happen to live on the south side of a hill. Plant good healthy trees on a well drained soil, and with attention to them afterwards you will soon have fruit from them. While upon this subject we would say a word about planting trees on the side of walls and fences. We, last winter, lost some young trees by the weight of snow which drifted upon them and crushed them down, breaking them off near the ground. We noticed that many others have lost trees in the same manner. In order to obviate this, it will be a good thing to place the stakes round them in the fall, together with brushes applied in such a way as to take most of the weight, instead of bearing on the young tree. By a protection of this kind until the tree is large enough to resist such action, it will be saved from hurt.

BEES.

Every farmer should keep bees; a few swarms to furnish honey for his own use, if not more. They toil with unremitting industry, asking but a full sweep of the wing and no monopoly. Every man in either town or country can keep bees to advantage. Dr. Smith of Boston has an aviary on his house-top from whence his little winged laborers traverse the air eight or ten miles in search of food. What a delicious banquet they afford from the rich nectar gathered! they collect honey and bread from most kind of forest trees, as well as garden flowers, orchards, forest, and trees all contributing to their wants, and their owner gratified with the whole. Sweet mignonette is especially mentioned as easily cultivated by drills in a garden; and is one of the finest and richest flowers in the world from which the honey-bee can extract food.

The cob-web must be kept away from the immediate vicinity of the hive, and all other annoyances removed. Never kill a bee. The smoke of fungus maximus or gommion puff ball, when so as to hold fire, has a stupefying effect on the bee, and renders them as harmless as brimstone does without any of the deadly effects. By means of this, weak swarms which would not live through the winter, may be united in strong stocks. It is a fact borne out by experiment that alive thus double will not consume more honey in the winter than in its natural state. This was discovered by a Swiss Doctor. The additional feed seems to serve, instead of additional food, to keep up the vitality of the half torpid bees. A cold dry room is the best winter quarters for bees. They will consume less honey than if left on their summer stands, and will not be weakened by the loss of thousands, which tempted out by the premature warmth, are caught by the cold winds, fall to the ground, and never arise again.

Dryness is essential, and ventilation of proper airing of the hives in summer, is the most valuable improvement in bee keeping. Western Emporium.

The World's Fair.—A late London letter says that the Emperor of Austria will visit the coming World's Fair at London with a large suite of nobles and savans, and that Mirari's hotel has been engaged for him. It is also said that the Emperor of Russia will be a visitor. The building for the Exhibition, although not quite completed, formally passed into the hands of the Commissioners on the 1st instant. Several large cases of goods have already arrived from China and India. We hear of a pearl shawl valued at £ 7,000, and a gold-mounted saddle, set with precious stones valued at £ 6,000; this last was the property of the late Ranjeet Singh. His highness, Ali Moored, has contributed largely to the exhibition in embroidered quilts, enamelled swords, &c.—There is also a very fine specimen of carved ivory from India. Articles of a very different description, not equally interesting, as showing the industrial facilities of man developed under widely different circumstances will be exhibited in cushions and cot ton cloth, the manufacture of native Africans, consigned to the exhibition by the King of Dahomey.

MONROSE BUSINESS DIRECTORY.

- C. M. SIMMONS—Fashionable Boot and Shoe maker, over A. Baldwin's Harness shop, Turnpike street.
- ELDEB & NEWCOMB—Dealers in Hats, Caps, and Furs; opposite the "Democrat" Printing office, Foot Public Avenue.

"MEDICAL CARD."

DOCT. PATRICK finds, on examining into the state of financial affairs, a necessity as he believes, for calling on those who are indebted, for a settlement; and although he disclaims any intention of being hasty or inconsiderate, he would beg to suggest to the most delicate manner possible to those whose accounts have been standing from three to ten years, the propriety of making some payment, before their available funds have been otherwise appropriated, or exhausted upon the various humbugs of the day.

Nov. 7, 46:2wt.

Notice to the Public.

New Seawater, Fall and Winter Goods, at the Great one Price Store.

L. S. LENHEIM, GREAT BEND, PA. BEING LEAVE to take this opportunity of tendering his sincere thanks to his Friends and Customers for the generous patronage they have extended to him, and at the same time inform them that he has just returned from New York with a large and choice selection of

FANCY AND STAPLE DRY GOODS.

A fresh and extensive assortment of Groceries, Provisions, Boots & Shoes, Hats & Caps, Hardware, Crockery, Drugs & Medicines, &c. &c., which will be sold for cash or on credit at very small advances, which will defy all competition. Laudanum, paregoric, Hive's syrup, chloroform, colodion or liquid adhesive plaster, spirits of nitre dulc, aqua ammonia, sulphuric ether, spirits of Lavender, comp. salts of tartar, antimonial wine, oil of spike, balsam copaiva, brimstone sulphur, pulv. rhacoral, quicksilver, demijon, bottle and vial corkers, &c. &c.

In short, a whole newspaper might be filled in the rain attempt to enumerate the one half of the articles kept for sale at TURRELL'S. This is the right place to buy Goods, and to buy them cheap.—The best kind of Goods are kept here, and from the variety and quality of them, great inducements are offered physicians to make their place of regular purchase. The public generally are invited to call and examine the quality and prices of goods.

October, 1850. ABEL TURRELL.

To Druggists and Farmers.

Valuable Property for Sale.

THE following Real and Personal Estate, as hereinafter described, situate in New Milford, Susquehanna County, Pennsylvania, will be sold at a great bargain to any one who may choose to purchase. The real estate consists of seven hundred acres; five hundred of which are under improvement, and on which are four dwelling houses and seven barns. The farm is well designed for a Dairy, and is capable of feeding one hundred Cows during summer and winter, and every part of it well watered with springs and streams. The buildings and land are in good condition, and on the premises are about five miles of good Stone Wall, and the other fences are also good, and on the wood land are large quantities of Chestnut Timber, which will supply the farm for many years to come, and which will also be valuable for building the Railroad about seven miles from Great Bend, through which the New York & Erie Railroad passes, and about one mile from the probable Depot on the Martin's Creek Railroad, which will lead from Lockawanna Coal and Iron Mines to intersect the New York & Erie Railroad at the Great Bend. It can be very advantageously divided into five farms, on four of which would be the necessary Dwellings and Out-houses, Fruit Trees, &c.

With the above will be sold a very large stock of Cattle, Horses, &c., including Durham Cows, Working Oxen and young Cattle, and also all necessary implements of husbandry for carrying on said farm or farms.

The Terms of Sale will be as follows:—One-fourth of the purchase money for the Real estate will be required at the time of purchase, and for Stock, Farming Utensils, &c., half down and the residue to be paid in equal annual instalments, with interest annually on the whole sum unpaid, to be computed from the full delivery of possession, the first instalment payable in three years from the date of delivery of possession, and the whole amount to be paid within ten years from the sale, to be secured by Bond and Mortgage. Full possession to be given on the first day of April, 1851, with the privilege of putting in crops next Fall if desired. A good and indisputable title given.

The above described property belongs to the estate of S. MEYLER, late of said county, deceased, and a more desirable property has not at any time, in this section of country, been offered for sale, and no greater inducements offered to purchasers. Persons wishing to invest money in Real Estate and a good Stock, cannot do better than to call and examine for themselves. Other tracts or lots of land lying in said county, are also offered for sale. Applications can be made to M. Meyler at New Milford, or to B. S. Bentley at Montrose, in said county, and any further particulars that may be required will be given.

MICHAEL MEYLER, Executor of S. BENJ. S. BENTLEY, Meyler, de'd.
