MONTROSE, MARCP 6, 1851.

Seed Polatoes.

brithe December number of the Genesee familier, page: 277, the question is asked, Whether it is more advantageous to plant cattle.—Gen. Farmer.

small polatoes than large ones !" from my youth I have been taught the impartance of selecting the largest and best potatoes to be used for seed. My practice has been occasionally to put one such in a hill; but generally to cut them into two pieces and to put three pieces into each hill .-In the spring of 1849, owing to the scarcity and high price of potatoes I was induced to plant, as an experiment, some small Mercers in the garden on a square that was highly manured. The yield was great and the potatoes first rate as to size. Being much dishe gave an unqualified opinion, that the favorable result was owing to the richness of the piles The past season I planted several bushels of the largest and best Mercers I could purchase in the city. They were generally city into three pieces cach. But the supply not being sufficient, I planted two or three bushels of small ones, such as had been laid aside as too small for table use .-Of these three were put into each hill, and were planted alongside the large ones. The quality of the ground, the quantity and the time of planting, and the tillage, were in all respects the same. When the shoots frem the snfall seed first appear ed, and for a short time after. I thought them rather more slender than those from the large ones, but soon there was no perceptible difference. At

harvesting, the size quality and product from the small seed was equal in all respects to the large ones. But the ground on which these were planted was rich, having been highly manured. To complete the experiment however, I planted at the same time halfanacre of ground of fair quality that had been tilled before but not manured. Half the piece was planted with the small seed, and half; with the largest and best quality. These were cut into two or three pieces each. Previous to the first hoeing, a handful of leached ashes was thrown on each hill. At harvesting the potatoes were large and fine; and those from the small seed were equal in size and product to the others. The richness'of the ground, therefore, in the first parcel was not the cause of producing as large potatoes from the small seed as from the largersoIn the latter case, ground comparatively poor, produced the same results. If a bushel of small potatoes, that would not sell for one-fourth the price of large ones, should prove as good for planting as the large, it

## Wintering Stock.

made fliese suggestions to direct the atten-

tion of farmers to the subject.

MESSES. Epirons; I observe that some of my neighbors let their cattle run in pastures late in the fall, in snow and hail storms, endeavoring to get a scanty subsistence from the half frozen ground. Now we think there is neither kindness nor economy in such must, of course suffer more or less from exposure to the cold rains, and rigorous nights of this season of the year, even without snow. The drizzling storm penetrates the bair or the fleece, to the skin, chills their limbs and retards the circulation of the "blood, which is the life," whilst the feed frost bitten and withered, its juicy sweetness

gone, is scarcely worth picking. The opinion of the cattle may be gathered from their wandering wistfully about the fields or gathering in the vicinnity of the barn turning up manure heaps for the few straws they can pick out of them, and by their lowing, plaintively preferring their bequests for better food and shelter. The farmer who pursues this plan of late pasturing, without any feeding, may save a few stalks and a lit-He hay, but loses more I imagine in the condition of his stock. When cattle find so Hittle pourishment in the frost bitten grass, fliat they turn eagerly to dry hay, or even straw, have we not a right to conclude that thigh time to commence feeding them?

Non can a farmer be guilty of more thriftless waste and cruelty, than, after commencine to fodder his stock, to scatter his hay or straw about the barn yard and leave them to stand and shiver in the bleak winds and stormanof winter. Cattle appreciate kind rare and good shelter, and thrive under them more than ever entered into the dreams of some men. Their increased flesh, smooth; glossy skin, and saleableness next spring, if defined, would amply compensate for the trouble and expense of warm sheds and stall-Meding . In addition to this the hay saved that was formerly trodden under foot, and the diminished quantity consumed, it is believed would pay the cost of all the lumber perliamin a single winter in the case of large herds. Every body knows, or ought to know, that animals in good condition and warmly housed, not only thrive but thrive on two-thirds, perhaps less the amount of tood that is otherwise demanded. I know this is

Sameldistort, Messie Editors, but a continual dropping will wear even stones. There in view, at this moment, two farmers. One of them has a select herd, which at this season, he shute up in convenient smalls every afternoon at about 3 o'clock, fasfraction entheanimal to a post, with a "cittle more comfortable than the stanched, feeding and exercise in the morning say at 9 or 10 o'clock. His cattle are always in condition, come out fine in the spring, and command a ready sale; while the saving of hay have been heard to say is nearly one half.

This other leaves his animals to shift for themselves in a vistorm of select for general protecting shounded was as many as can and as work a that may such themselves as many as can and as work a that may such themselves are fonce. He loads about the protecting shounded to general the law on the ground.

Ball WER Carries on the Baking and Candy husiness in all its various branches, one door west of Wilson's Store, Turnpike Street, Montrose, Pa. All kinds of Candy for Weddings or Parties kept constantly on haud, or made to order on the mortest notice.

ASH pels he all kinds of allipoing furs and Shall kinds of Candy fursions.

DOOTS and Shall kinds of Candy fursions, Galters and Shall kinds of all kinds of allipoing furs and shall kinds of Candy fursions. dition, come out fine in the spring, and combe her been heard to say is hearly one half

A good part of it is destroyed, and buried and what is consumed is not sufficient to counterbalance the piercing cold. Consequently, when spring opens, his cattle are poor, rough and gaunt, and likely spend half the summer before they get over their hard fare. Nobody, of course, cares to buy such

## The Potato Disease:

At the second Agricultural meeting at the State House, Prof. Wm. C. Fowler of Amherst and Hon Caleb Cashing of Newbury, were appointed a committee to prepare questions, upon agricultural subjects, these to be submitted to the farmers of the Commonwealth. Upon the subject of the potato disease, they publish the following questions: I. Does the disease extend to the whole race or only to that part which has been cul-

This question can be answered by investigating the state of the plant in those regions where it is said to grow spontaneously. If the disease is constitutional and extends to the whole race then there would seem to being remedy. If it extends only to the cultivated part, then the proper way will be to obtain seed from those plants which grow poutanéously.

II. If the disease pertains only to the culivated portion of the race, does it extend to the whole of that portion or only to certain varieties? If certain other varieties are free from the diseasel or less liable to it than others, then they should be carefully sought and

III. As a remedial process, has the exper mest been fully tried of planting seed from several successive generations of the plant, instead of the tuber.

IV. As witnessed from year to year, does the disease commence with the vines or with

V. Is the disease attributable to an atmospheric influence analogous to that of mospheric infinence analogous to that of maleria in the luman race? and if so do some exposures suffer more than others?

GREAT BEND CLOTHING STORE. VI. Has the mode of cure recommended

by Baron Liebig, and D. Klotzsch, namely, that of catting, or pinching off the top of the vines been thoroughly tried in our coun-

VII. What are the effects of charcoal sulphur, and sait when used as remedial a-VIII. Does elimate have any influence in

cases to prevent and in some to produce IX. Does excessive dryness or excessive

cellar, have an influence to produce disease ! X. Is the disease attributable to some soils ather than to others? and to some manures would be well to know the fact. I have

rather than to others? XI. Is the plant subject to different diseases, or to different types of the same dis-

REMEDY FOR VEGETABLE POISONS.—As almost every farmer is more or less troubled with poison ity, sumach, parsnip and the been appropriated to all classes of officers and sollike, from which I have suffered very much diers, who have served one month and upwards, in myself, and after trying a variety of remedies any of the wars in which our country has been entered found that a poultice of buck wheat ment at Washington with all the reason. treatment of our doinestic animals. They have toung that a pointer of blue of application, proofs, &c. All, therefore, who have vitral the size of a pea, pulverized and dis- claims to Bounty Lands, by application to him, at happy effect of removing the trouble, and effecting a cure in a short time. Some of titude. your numerous patrons may find this receipt worth ten times the cost of a yearly subscription to the Farmer .- Ib.

> VERY LIERLY .-- A man was brought up by a farmer and accused of stealing some ducks. The farmer said he should know them anywhere, and went on to describe their peculiarity. "Why," said the counseller for the prisoner, "they cant be such a rare breed-I have some very like them in my vard." "That's very likely sir," said the farmer ; these are not the only ducks of this sort I have had stolen lately."

Francis Pig- has strayed off from Indianapolis, leaving Mrs. Pigg and the little piggs to hunt their own feed hereafter. We'll do our share towards pen ning him
