AGRICULTURAL. MONTROSE, MAY 1, 1581,

To the Breeders of Good Horses. The celebrated Horse, Green Mountain Morgan, has been obtained at great pains and expense, with a view to the improvement of the Stock of Road Horses in Northern Pennsylvania; for all who have been conversant with the subject, will grant that in nearly everv instance where we have been favored with a good roadster, we have been indebted to some other section or State for them, and as the wide spread fame of the Morgan Horse places them so proverbially ahead of all other horses in our country, it is hoped that self interest, at least, will prompt the owners 1. of good mares to engage his services.

Youatt's great work on the horse by Skinner, at page 53, we find the following observations which undoubtedly are correct :] the place for them to deal. "So far as I have been able to learn, Vermont is indebted to Canada for her distinguished race of roadsters as well as the neighboring States., They have one distinct family, the Morgan descended from a little Canadian, fainous too, for running quarter races.-This family has been cherished for years and is as distinguished among them as old Archy in Virginia.

The three most noted stock horses got by the above, was Sherman Morgan of Hardwick, Bull Rush of Chelses, and Peter Burbank of Bradford, Vermont.

Green Mountain Morgan was raised by Maj. Bliss of Bradford, Vt., his sire was the celebrated Post Boy Morgan, sired by Bull Rush Morgan of Chelsea. His dam was the beautiful trotting mare Mountain Sylph, sird by the old Peter Burbank Morgan of Theeds, de, a large variety of Vests from six shi Bradford Vt. Her speed was tried by most of the noted trotoing horses of that day-Americus, Cato, Baker, Julieta, Buckskin, Champion and others, which in every case she proved the victor. While she was ownmatch with bay gelding Lightning, for a Stationery Links, substance of twelve miles, which and a great variety of fancy articles too numerous to enumerate, just received at FULLER's, she won easily in 39 minutes-beating Lightning 4 1-2 minutes.

Green Monntain Morgan is a beautiful silver Roan, 15 hands high, 7 years old-a fleet traveller, and for style of action and symmetry of proportion, he is justly denominated as fautless-and for bottom, endurance and speed, this horse sustains the general find employment for several years. [39] Reference

For the information of those who have not been acquainted with this stock of horses that now excel all others in this country, I will state that wherever they are known they are sought for, and command high prices and ready sales. They abound in that generous and noble spirit always to be admired in this useful animal, with docility and kindness of disposition, that renders them manageable alike for child or man. Their powers of endurance in performing long journeys, drawing loads or carrying weight, renders them particularly sought for, while nine-tenths of. all the fastest trotting horses now on the course, abound in this justly valued blood.

The above horse will be at Montrose and its vicinity on and after the 29th of May, in the charge of J. S. Blaisdell, who desires to say to his old friends, be patient, and he will show them something in the above line to excel by far anything ever offered in Susquehanna ceunty.

road which is soon to be built up Martin's Creek .-

in order to economise cost. Some cut the yourselves. tubers into as many pieces as there are eves tubers into as many pieces as tuero are eres in the potato, and allow from one to three pieces to a hill. Others divide the roots in the centre, passing the knife through them longitudinally and allow one half a potato only to a hill. Quarters are also used. Now it may not be generally known that there are two distinct parts to the potato, and that the apex, or end which presents a number of small eyes, will produce a crop fearlier by some ten or fifteen days, than the middle or body part. The produce of the latter, however, is always superior in point of size, while that of the butt or navel is inferior, the eyes being imperfectly developed or immature. In selecting roots for seed, the preference should always be given to the largest, soundest, and most symmetrical, as large, well formed roots will produce a better progeny than those of a more diminutive character. Having made your selection, cut off the seed ends, then the butts, and divide the middle into two sections ; the two pieces being sufficient for a hill. If you are desirous to have early potatoes, for table use, or for marketing, plant your seed ends. Feed the butts to your swine or cattle, and after allowing your middles to remain spread out on a dry floor for a fortnight to heal the wounds, plant them, and the result will be a liberal and healthy crop of well-formed and good sized ots. A NEW ENGLANDER. Near Claremont, N. H. March 5, 1851. roots 17. . EARLY POTATOES .-- Polatues may be for

warded from two to three weeks by placing them on the south side of a fence or building early in the spring, and protecting them carefully from the night frost by a stratum of of straw. The calorific agency of the sun's rays tends to energise the principles of reproduction, by awakening an earlier activity, which, when properly directed, operates favorably upon the future growth. Some de-posit their polatoes in fermenting horse manure till they have evolved sprouts two or three inches in length, but this is not to be recommended, as great care is necessary in planting in order to prevent the sprouts bein , broken, and so powerful a stimulus deteevenues the capacity of the taber for well sus-tringer and many growth they dope it d in the soil - Openmonic and Liegraph.
