

### Information Wanted.

The mother of Samantha Terwilliger, is extremely anxious to learn where her daughter now resides. Samantha left her mother at Cazenovia, Madison co., sometime in April last, and went to Seneca, Cayuga co., where she remained until October last, since which time her mother has not been able to obtain any information concerning her. The daughter, it is supposed, labors under the impression that her mother is dead, from the fact that the latter had a severe fit of sickness after her daughter left her at Cazenovia, and from which no hopes were entertained of her recovery. The mother, however, has spent all her means, in efforts to find her daughter, and now resorts to the newspapers. Any information concerning her will meet with prompt attention, if addressed to Alpheus Clark, Skaneateles, Oneida co., N. Y.

[Editor's note: by copying the above, will confer a great favor upon a poor, distressed woman.]

The accident which makes the President elect childless, adds to the list of Presidents who had no children. Washington, Jackson, Polk, never had children. Jefferson, Madison, and we think Monroe, had no sons. Of the other Presidents, only the two Adams, Van Buren, and Harrison, left sons of any prominence in active life.

### Mottos.

#### Acknowledgment.

Mr. H. A. Riley, desire to express their grateful acknowledgment to their many friends who, notwithstanding the inclemency of the weather, favored them with a visit on the afternoon and evening of the 12th inst.; and for their truly liberal donation. They wish also to tender their thanks to those who, although prevented from attending, have subsequently left their tokens of remembrance. These offerings of a people's kindness were never more gratefully received than now, as they were never more needed. Our earnest prayer is that the donors may be graciously and most liberally rewarded in the experience of the enduring riches of the grace of God.

Parsonage Jan. 17th 1852.

Leave Montrose, Dec. 16, 1852.

Now is the time to fix up for Winter.

**Philosophy of saving the Teeth.**

I simply say: We first carefully and

skillfully remove all the decayed matter from

the cavity, then after shaping it properly and

wiping dry, we press into it gold or silver foil which

are very soft and malleable, and continue to

do this until we have rendered them as hard

as the spinal bone. We thus completely exclude

the usual agent of decay, and the consequence is that the tooth decays no more in that part, and rarely in any other part, than in the cavity, and the tooth becomes much more durable, and should it be repeated, and I have seen an instance where it had to be repeated a third time, or even a second. If your teeth are decaying your only hope is in the dentist. They may be affected by the spinal bone, but the spinal bone is the natural agent of decay, and the consequence is that the tooth decays no more in that part, and rarely in any other part, than in the cavity, and the tooth becomes much more durable, and should it be repeated, and I have seen an instance where it had to be repeated a third time, or even a second. If your teeth are decaying your only hope is in the dentist. They may be affected by the spinal bone, but the spinal bone is the natural agent of decay, and the consequence is that the tooth decays no more in that part, and rarely in any other part, than in the cavity, and the tooth becomes much more durable, and should it be repeated, and I have seen an instance where it had to be repeated a third time, or even a second.
