NOTICE

TO SAW-MILL OWNERS, Or those who are about to build or repair.

The undersigned respectfully informs the public that he is duly authorised to sell the Right of the Johnson Re-acting Water wheel, to the counties of Monroe and Pike, patented the 22d day of June, A. D. 1840.

The Johnson re-acting wheel is the best now in use to propel a saw mill; it excels any other wheel in the United States under a low water head;--under a head from 5 to 7 feet is sufficient to cut from 2 to 3000 feet in twelve hours of inch or any other boards with ease. The wheels require, under a 7 foot head, 140 inches of water and so in proportion to any other head. Under a 7 foot head, the Saw will make from 200 to 250 strokes per minute. The advantage which those wheels have over any other wheels is, that it requires but four posts to make the floom or bulk head; the wheels are hung on the crank shaft. Two wheels are what is required for a Saw mill, and the posts planked inside the same as a pen stock. I have built one of those mills this season, on the Roaring Brook, in Luzerne county, for Mr. S. P. Templin, under about a 7 foot head, which will cut from 3 to 4000 in twelve hours of inch boards;--therefore, I can recommend them as the best wheels now in operation. There are several more mills in that part, all under low heads, which answers the same purpose as that of Mr. Templin's. For further information, please call on the subscriber.
