And filled with Contributions from the most emment and accomplished writers of the country.

The motives which have led to the commencement of this undertaking may be briefly stated. It is believed by the proprietor that there is in the United States an immense provision of literary ability, for which as yet there is no adequate encouragement, or field of display; that besides the numbers of clever and successful writers, whose productions are weekly, and monthly, and annualy read with delight by thousands, there are yet the interests of this district, over which, of publication to receive a brilliant award of fame ; and that the powers of those whose names are already pronounced with respect by lips of higher exertion than has yet been called forth. Mrs. George Nixon, one of the managers of the

is now left to the Government.

I cannot too strongly urge the policy of authorizing the establishment of a line of steamships regularly to ply between this country and foreign ports, and upou our own waters, for the transportation of the mail. The example of the British Government is well worthy of imitation in this respect. The belief is strongly entertained, that the emoluments arising from the transportation of mail matter to foreign countries, would operate of itself as an inducement to cause individual enterprise to undertake that branch of the task; and the remuneration of the government would consist in the addition readily made to our sleam navy in case of emergency the ships so employed.

Should this suggestion meet your ap proval, the propriety of placing such ships under the command of experienced officers of the navy will not escape your observation. The application of steam to the purposes of naval warfare, cogently recommends an extensive steam marine as important in establishing the defences of the country. Fortunately, this may be attained by us to a greater extent without incurring any large amout of expenditure. Steam ressels to be engaged in the transportaion of the mails on our principal wa ter courses, lakes and parts of our coast, could also be so constructed as to be efficient as war vessels when needed; and would, of themselves, constitute a formidable force in order to repel atlacks from abroad. We cannot be blind to the fact, that other nations have already added large numbers of steam ships to their naval armaments; and that this new and powerful agent is destined to revolutionise the condition of the world. It becomes the United States, therefore, looking to our cities, in every direction, bespeaks their security, to apopt a similar policy, and the plan suggested will enable them to do so at a small comparative cost.

I take the greatest pleasure in bearing testimony to the zeal and untiring industry which has chalacterised the conduct of Each, in his appropriate sphere, has rendered me the most efficient aid in carry. ing on the Government; and it will not, 1 trust appear out of place, for me to bear this public testimony. From the Cincinnati Daily Times, of Jan. 4th 1844. Coughs--The variableness of the weather this winter has caused an unusual number of persons to be afflicted by colds and coughs-scarcely a family has escaped; and with many, carelessness in attending to a cough, has laid the foundation for consumption. WORMS CAUSE DEATH.

Thousands upon thousands have gone down to graves from Marasmus, or a wasting away of the body, Epilepsy, Fits, St Vitus' Dance, Locked Jaw, Apoplexy, Mania, Dropsy in the Head, Palsy, Consumption, Pleurisy, Dysentery, Convulsions, and many other supposed apparent diseases; and many have suffered for years and years, and have been doctored for some imaginary complaint without the least relief; and others are still suffering, when all the trouble arises from worms, and worms alone, which are entirely overlooked, and when the proper treatment would have saved their lives, and restored them to health. Every observant mother cannot but see and admit the truth ; but still many physicians shut their eyes to that all-important cause of disease.

Persons of all ages and sexes, from the tender nfant at the breast to old age, are all liable to be afflicted with worms. Many a person has suffered his whole life from them, and never suspected it. Different kinds of worms inhabit different parts of the body; but a long dissertation on their particular locality, origin, &c. is superfluous and unnecessary, so long as a proper, safe and certain remedy is at hand. That is all the public wants or cares for. The sale of over two millions of boxes of Sherman's Worm Lozenges, in less than five years, places their reputation far above all other worm
