future DANGER 2,500,000,000,000 YEARS AHEAD .- Our moon will tell us most of the earth's future, unless we are altogether astray in reading the evidence that seem to be offered us. Venus shows the possession of a watery atmosphere, and is doubtless habitation under conditions similar to those upon the earth. Mars shows not only divisions into sea and land in about equal proportions, but accumulations of what seems to be ice and snow at its poles, which decrease and increase apparently in the seasons of summer and winter. But the moon has no water. She has no clouds and can have no water. Her seas have disappeared. Did she ever have water? Did she ever pass through such stages as our earth has gone through? Was this cold and dead world ever warmed with life like our earth? We cannot doubt it when we the crust of the cooling orb until they entirely disappear. That is a German theory.
