# HOW WATCHES ARE MADE. In a Solid Gold WATCH, aside from

Port Grape Wine the necessary thickness for engraving and polishing, a large proportion of metal is Used in the principal Churches for Com needed only to stiffen and hold the engraved portions in place, and supply strength. Excellent for Ladies and Weakly Persons and the Aged. The surplus gold is actually needless. In James Boss' Patent Gold Watch Cases this WASTE is saved, and SOLIDITY and SPEER'S STRENGTH increased by a simple process, at one-half the cost. A plate of SOLID GOLD is soldered on each side of a plate of hard nickel composition metal, and the Prospect three are then passed between polished steel rollers. From this the cases, backs, centers, bezels, etc., are cut and shaped by dies and formers. The gold is thick enough to admit of all kinds of chasing, engraving and engine turning. These cases have been worn perfectly smooth by

use without removing the gold. This is the only case made under this process, Each case is accompanied with a valid guarantee signed by the manufacturers warranting it to wear 20 years. 150,000 of these Cases now carried in the United States and Canada. Largest and Oldest Factory. Established 1854. Ask your Jeweler,
