Looking out over the many homes of this country, we see thousands of women wearing away their lives in household drudgery that might be materially lessened by the use of a few cakes of SAPOLIO. If an hour is saved each time a cake is used, if one less wrinkle gathers upon the face because the toil is lightened, she must be a foolish woman who would hesitate to make the experiment, and he a churlish husband who would grudge the few cents which it costs.

Going To Leave The Farm.

The work of the farmhouse was over for he day; the children-with the exception of the eldest son, who had gone to the vilage-were in bed, and in the big comfortable kitchen Farmer Harewood, his wife, and his wife's sister, Mrs. Lucas, were sit-

There was silence in the kitchen save for the snapping of the fire in the stove, the ticking of the big, eight-day clock in the orner, and the rustle of the farmer's news-

a load which you must share, Eli; I have rne it alone as long as I can bear it. ere is great trouble in store for us, husand-George is going to leave the farm." The newspaper fell to the floor, and for a oment the farmer looked at his wife, too much surprised to utter a word. "Going to leave the farm!" he repeated

at last. "Sarah, you must be dreaming." Mrs. Harewood shook her head sadly. "I wish I were," she said. "No, Eli, it true. George has made up his mind to

leave us. I have noticed for months past that he seemed dissatisfied and restless, and since you sold Vixen he has grumbled a great deal about the work, and the dullness of his life. And to-day I heard him say to Jasper Flint that he would not be here a month from now; that he had had ough of farm life, and intended to leave; his advancing years. and if we refused our consent to it he would run away, rnd take his chances." 128 E. Jefferson St., - - - Butler, Pa

"We'll see about that," said the farmer, angrily. "Consent to it! I rather think not! I won't consider it for a moment. What would he be worth a year from now if I let him go? He'd fall in with all sorts of rascals in the city, and get us all into trouble. Besides, I need him here. It'll be 10 years at least before Harry can take

"Why don't you make him want to stay, Eli?" asked the gentle voice of his sister-

"If he's got the city fever on him all the talking in the world wouldn't do any good," rejoined the farmer. "He wouldn't listen to a word."

creature's mane, and in spite of his 18 That ended George's desire to leave the farm. He was never again heard to mention the subject, and he grumbled no more about the hard work, and the monotony of his life, but in every way tried to show his appreciation of his father's kindness.

In fact, Eli Harewood was wont to say

he had reason to bless his sister-in-law for her good advice, and that he owed it to her But George never knew to what he owed the change in his fortune.

Little Things That Count.

In every line of business, no matter whether conducted upon a large or small scale, it is the little things that counts. The little expenses, the little wastes, the balance of accounts, either for profit or loss, and it is these little things that need the closest attention. The larger, more important details of every business are carefully looked after; there is very little chance for neglect, careless sight. The workman who spoils a costly piece of machinery, or causes a loss of any considerable account, is held responsible, and is generally very careful in this re "Don't talk. Don't let him ever suspect spect, but in little things he is not a of no consequence, and as having no rea

We have heard it asserted by a man who around the bush; and the sooner it's done beginning on barely nothing, succeeded in the better."

building up a large and profitable business, and retiring with a considerable for woman's advice. Let me tell you how to deal with George. I have been here three what was the secret of his success, he re months now, and have taken a deep in-terest in the boy. I have seen his dissatis-looking after the little things and seeing faction and recognized the cause. I have that not a thing was thrown away or cast werheard him talking to Jasper Flint aside as too small or insignificant to be o ore than once, and only yesterday I any value. A few cents here and a few heard him say that if he went to the city there make up quite a sum in the course of what he earned would be his own, but that a year, and it is by paying careful atten here he worked from dawn to dack, and tion to the little details, by looking after There is a great deal more in this that most people would be willing to admit city, gets \$12 a week, and Tom is only 17. They are in too much of a hurry to make

that will give you a chance to work it, and nature's secrets. But, while Newton's vast number of comb if you choose to break in that pair of young oxen I bought the other day from Bagley | discovery is unsurpassed in grandeur, with them. |

One of the control of the contro earthly affairs.

son by the arm and led him out on the vegetables. Oxygen may be prepared in a my boy."

You look as though you had a big load on your mind."

"Vixen!" The word came from George's mercuric oxide in a tube or retort. Mercury trades and manufactures, the profitable mercuric oxide in a tube or retort. Mercury trades and manufactures, the profitable son by the arm and led him out on the vegetables. Oxygen may be prepared in a wariety of ways. One way is to heat mercuric oxide in a tube or retort. Mercury trades and manufactures, the profitable son by the arm and led him out on the vegetables. Oxygen may be prepared in a mimals, was linked with that discovery. The successful pursuit of innumerable mercuric oxide in a tube or retort. Mercury trades and manufactures also over the profitable son by the arm and led him out on the vegetables. Oxygen may be prepared in a mimals, was linked with that discovery. "Have," answered his wife. "And it lips with a long sigh of joy, and with one is soon condensed in the coolest part of the separation of metals from their ores, also bound he was at the side of the little black retort, and a gas is liberated, which may stand in the closest connection therewith. be collected over water: 2EgO equal 2Hg It may well be said that the material prosplus O2. It was by this method that Dr.

Priestley discovered the gas. A supply of since the time oxygen became known, and very pure oxygen may by obtained by the the fortune of every individual has been action of heat upon potassic chlorate. A augmented in proportion."—Pop. Sci. flask may be used to hold the chlorate, and News. years, fairly broke down and sobbed aloud. | the gas may be collected in jars over water. When the quantity of chlorate is large, the heat required is apt to soften the glass of the flask in which the chlorate is deomposed. It has been found that metal oxides, if mixed in a fine powder with at a much lower temperature, although such oxides do not appear to have experienced any change during the operation. many others exist. Oxygen is a colorless, tasteless, and

centless gas, a little heavier than air (specific pravity 1.1056), and only slightly soluble in water. It was first condensed to a liquid by Pictet and Cailletet, but the operation was quite difficult. It refracts light the least of any known substance. At ordinary temperatures it possesses weak magnetic properties, but its susceptibility to magnetization is diminished, and sometimes disappears temporarily, at 325°, Oxy gen has a strong attraction for other elements, excepting fluorine, and enter into combination with them, forming great variety of compounds. With some ments it forms gases; with others, solids. Some of these compounds give up their oxygen with great ease, while others do not. With one set of substances i forms neutral compounds; with others, alkalies; with still others, acids. With some elements it forms nourishing food; with others, deadly poisons. Mingled with ne gas, nitrogen, it forms the air we eathe; combined with another gas ydrogen, it forms the water we drink. It ecessary to the support of all anima ife, and hence was called by the old emists "vital air;" but its actions upon the lungs is very violent if breathed un liluted for any considerable time. The distinguishing feature of oxygen

its great power of supporting combustion. When, by any rapid chemical action, light and heat are produced, conbustion is said to have taken place. Heat is usually neces heat given out during the process is more than enough to carry it on. In regard to ombustion, all bodies may be included in over the smoke stack. one of three classes:

like oxygen, allow bodies to burn freely in them, but do not burn themselves. 2. Combustibles; those substances which, like charcoal, actually burn in a gas of the first class, when raised to the proper

3. Those bodies which, like sand, iro rust, or earthy bodies in general, neither burn themselves nor support the combusion of other bodies; they may be made red ot, but they do not burn. The terms "combustible" and "supporter

lative; for, although hydrogen is ordinarily combustible, and oxygen and chlorine supporters of combustion, yet these two last mentioned gases are quite capable of urning when surrounded by an atmosphe of hydrogen. All substances which burn brush themselves make the gifts they send in air burn in pure oxygen with greater brilliancy. If a glowing splinter is put into a jar of oxygen, it is lighted and burns with a very bright light. Substances isually considered incombustible may burn violently in oxygen. For instance, take steel watch spring, coil it into a spiral, tip one end with sulphur and light it, and put the spring into a jar of oxygen. The spring burns with a dazzling light, and scintillates beautifully. The combination of oxygen with others elements is called oxidation, and the products are called oxides. Com bustion is the combination of oxygen with another substance; so that oxidation really combustion, and vice versa.

The cases considered above are cases rapid compustion. At ordinary tempera es oxygen often enters into combination so slowly that the heat liberated is not per ceptible (for oxidation always causes heat) air. This is called slow combustion; but this slow combustion is always accompan ied by heat. A pound of iron will produce the same amount of heat, whether rusted n the air or burnt in oxygen, on in the the first case it may take years to develop this amount of heat, and in the sec only a few minutes. Under favorable circumstances oxidation may become so rap id as to raise the temperature of a dody to its ignition, when it bursts into flame, pro ducing what is known as spontaneous com This is especially the case in machine shops or factories, it pies of tow used for wiping oil from machinery, o piles of oily iron filings, are left lying about for any length of time. the combustible, or body which is burned, may undergo such a complete change of form as to disappear from sight, yet there is no destruction of matter or loss of weight during combustion. When a candle burn it seems to be completely destroyed. leaving only traces of ash. However, it may Mr. Newed (twining his arms about her) e shown that there is no actual destruc tion of the candla's components, but that they have combined with a certain propor tion of oxygen, forming carbonic anhyfride and aqueous vapor; and these, alhough invisible, really weigh more than the original candle, the gain in weight representing the amount of oxygen necessary to produce the change. Metals oxidize more rapidly in a moist than in a dry at mosphere. In the the case of iron, the ox of humor, judging by the explanation a idation goes through the entire mass; but woman hailing from that State gave of her with other substances, like lead and zinc, elopement with a drummer. She said she only a coating is formed on the surface, did it for a joke on the drummer, who was which protects the parts beneath from oxi-

Stood on the Floor. Ella Ewing, a timid country girl from cotland county, Missouri, poked her head through the transom of her room at the Commercial Hotel the other night and called to the porter to put more coal on her fire. Miss Ewing wasn't standing on a table or a chair when she did this but on the floor. She is eight feet high in her stocking-feet and weighs 234 pounds, and is not yet done growing or fully developed. Her father can walk with a plug hat on under her outstretched arms and her mother can hide beneath the generous folds of her skirt. The girl was brought up to agriculture and is a model farm-hand. Two rub it gently with the head of the match, years ago, Mr. Ewing says, she raked thirty acres of hay with a sulky-rake, and there are few young men of her age in the skillfully manage a team of horses .-Chicago Times.

The Congressman a Creek.

Col. Lucius W. Miller, Congressman-elec illblooded Greek, and the first man of that nationality ever elected to an office the United States, so far as known. He knows nothing about his own parentage. writing, tobacco and gum chewing and His foster-father, Col. J. P. ermont, was in Greece when that country was fighting for its existence, and on the little Greek boy, and being unable to find claimant brought him to this country, adopted him as his own child and gave him his name. Some years ago the young Greek come a prominent citizen.

"There is something that has prey heavily on my mind since our engagement dear," he said "but I am almost afraid to tell you of it." "What is it, Georget" th young woman asked anxiously. "I am a somnambulist."—"Oh, is that all!" she exclaimed with a sigh of relief, "I have always been a universalist myself, but of course when we are made one I shall expect plant for paper making. They will slip to attend your church." up on this some day. -"O my friends, there are some spe

tacles that a person never forgets!" said a lecturer after a graphic description of a terrible accident that he had witnessed "I'd like to know where they sell 'em," remarked an old lady in the audience who is always mislaying her glasses. -Poet's Wife: "Dinner is ready, dear

Europeans alike, not that they both get ustice. There is no jury. I will give an Last May six Dacoits were captured out in the jungle. They were brought in before After hearing the witnesses he condemned the six to be hanged by the neck till they were dead. The clerk wrote it down in a book. This hearing was held on Sunday norning and they were hanged on Mor day. The magistrate was hangman also.

at least so I am informed. When a young Burman finds a girl whom he wishes to marry, the girl of course being willing. he goes to the girl's parents and asks them how many rupees presents they want for the daughter. If they can make a bargain, all well and good, the parents giving their blessing or saying amen. If unsat the young man goes to his love's house, calls her out and immediately embarks for mother clime, stays away for a short time, and then returns with his wife. So you see we have elopements here as well as at ome. A police inspector at Yenangypees. This is about as high as I ever heard

of a man paying for a Burmese wife.

We don't hunt game in Burmah the same as in America. Yesterday myself and four others went into the jungle hunting deer. We always take our food and water with us when we hunt. We had three coolies to carry water and food for us and we took about eight gallons of filtered water, twelve loayes of bread, one can Chicago corn beef, one can of mackerel and a fried chicken. We had three Durwans, two of them with rifles and fixed bayonets, and five Burmans. The chief or head man we furnished with a short shot gun (muzzle loader) Sandy Miller, the old Scotchman; Frank Weller, Elmer Reighner and myself left the house yesterday morning at 3 o'clock, with us, and went to Bhema where we met Igwoch and his four men, and started for the jungle. Christ was ready to go the night before but did not sleep well during the night and thought he had till 8, when we halted at the place where we had previously sent the coolies with water and food. We had been hunting in the jungle since daylight. Reighner and myself, a Darwan and a Burman went in one direction, Miller and a Darwan and Burman guide went in another, and Weller with Igwoch and another Burman and a still in another. We all came together at 8 o'clock for food and water, Weller having seen one deer, which was all that was seen all this time. We ate and drank with great appetites, having had nothing since the night before. We also shared with the coolies who ate nothing but bread and sugar, it being against their caste to eat our meat. The Durwans would eat noth ing at a'll nor drink a drop of water because it had passed through our hands and was against their caste. The Burmans brought their food with them, also their water which was filtered. Their food was rice with curry, and we gave them two loaves Breakfast over we started off into the jungle again, this time my Burman followed a deer track a mile and a half and only lost it in the grass. It is a wonder to me how he followed it over the again for a rest. None had got a deer or even a shot at one. Reighner was near ly played out and went home with the three Durwans, who were weak, hungry and thirsty. We hunted till about 3 o'clock and then started home without firing a shot the whole day, let alone getting a deer. We were in sight of the derrick at

Rhodaung and I had just remarked that I would not shoot a deer if I saw one when oming suddenly to the brow of a chaung overlooking an open bushy place, I saw a small deer running to the bush and I fired just as it was entering the jungle, giving it a death wound in the hind quarters. The whole party livened up. The deer crossed a small dry bed of a creek and was endeavoring to climb the opposite bank when Miller and Frank fired, one ball taking effect in the deer's head. By eating sparingly we made two meals of it. Could have eaten it in one meal. I got one two weeks ago yesterday.
