To Any Person who Can Prove that the Adriance Rear Dis

We Guarantee the Adriance Binder

To do as good work with less power than any binder on the market. We do not ask you to buy the machine until we prove it on your own farm. Why would you buy the old style, away up, big, clumsy, grain-threshing, horse-killer, elevated binder, that requires an extra man on hilly ground to keep it from upsetting, when you can get one that is low down, one that cannot be upset, one that is light and neat, and will not thresh out grain, one that is nearly as light draught as a single reaper, and one that does not require trucks for transportation and will pass through a ten foot gate? If you dispute the statement, challenge us for a field trial with ANY or ALL binders on the market. We will gladly meet you. It will do us good in the future as well as it has ta the past. It would not be the first time. The Adriance Binder has come out victor-tous in many field trials in this country, as well as in Europe, England, Germany and Trance, where the Adriance Binder has taken gold and silver medals from each. It you dispute our word, challenge us; you can always find us at 320 SOUTH McKEAN, BUTLER, PA. Call and see sample binder.

We Lead All Competitors in Binder Twine. In Prices and Quality We are Ahead.

We bought early and can sell twine at what it now costs wholesale. If you are in Reaper or Mower, Hay Tedder, Hay Rake or Hay Loader, or Farm Machinery of any kind, Fertilizers, Fencing, &c., call and see us. If we do not have what you want in machinery, we can at least show you the largest assortment of Buggies, Surries, Phaetons, Spring Wagons, Carta and Farm Wagons you ever saw in one place. We do not handle the cheapest rigs on the market, but we handle and guarantee our rigs to be the best for the money we ask for them. We have control of the Youngstown Carriage and Wagon Co.'s goods in this place. Their work is second to none in quality and finish. If you doubt this call and we can easily convince you. Low prices and guarantee our motto.

So MINUTE are the pores of the skin that a grain of fine sahd will cover 500 of them.

It has been demonstrated by means of photography that certain well defined types of facial expression are not only associated with but are dependent upon certain relative tensions of the oculo-motor muscles. The construction for navigating the air represented in the illustration is designed to be readily guided and controlled in its travel, irrespective of the direction of the wind. It has been patentially by Mr. William N. Riddle, of the direction of the wind. It has been patentially by Mr. William N. Riddle, of the first part of the battery for working the instrument, the iron hull of the ship the other plate, and the sea itself the exciting liquid, so that insulation is not required.

The current over the Mersey bar since the extensive dredging operations has rolled by Its Travel. form, and is divided horizontally into
two compartments, the lower one for
freight and the operative mechanism
and the upper one for passengers. The
body is centrally pivoted at its upper
end to a main frame piece above, the
lower end of the body also being centrally pivoted in the horizontal member
of a yoke, in which the body is sus-

pended from the frame piece, cordsserving as braces. A circular rack, controlled by a spring catch upon the upperend of the body, holds the latter stationary in any required position in traveling around its vertical axis. Connected with the yoke and the stay cord at one side is a stationary rudder, and a laterally projecting second rudder is pivoted to one end of the main frame piece above, this rudder being capable of adjustment up or down, and being locked in position by a learn handle engaging

the glass meet. The egg will jump to the other glass. With a little practice this can be done every time. Be careful to blow in a line with the left-hand n position by a lever handle engaging rack on the frame piece. Attached by bords to the latter is an upper gas records to the latter is an upper gas receptacle divided into compartments, one
above the other, united to form but a
single buoyant chamber, but so connected with one another by central upright tubes that if one compartment collapses or bursts the others
will hold up the ship. To propel the
vessel, a horizontal shaft projects from
each side, each carrying two upright
partle circular tracks, one below and

each side, each carrying two upright partly circular tracks, one below and the other above, between which an upright propelling wheel is arranged to rotate upon the shaft. Each wheel is driven or rotated by gearing actuated by any suitable prime mover or motor within the body of the vessel, and the construction of the wheel is such that the paddles will have a feathering action, striking the air on their flat side during half of the revolution of the wheel and presenting their edge surface to the air during the other half of the wheel's rotation. The construction is

and hugging separately.

He—Then may I have the next break?

-Life. wheel's rotation. The construction is such that the position of the wheels such that the position of the wheels may be changed to give their paddles a flat or edge presentation to the air as desired, and to move the vessel upward or downward when necessary, it being designed that in lowering the ship it will not be necessary to permit the escape of the gas in the buoyant chamber.—Scientife American.
