The New Treatment of Diphtheria.

The practical tests which have been applied to antitoxin, the new remedy and also apparently a preventive of diphtheria, have proved very satisfactory. M. Roux, of the Institut Pasteur proves the efficacy of his treatment of diphtheria by a five months' test, and finds that injections of the anti-diphtheric serum reduce the death-rate from 51 to 24 per cent in hospital practice.

The case of Henry Layton, a farmer who resides a few miles from Conneville, Pa., is attracting considerable attention from the medical profession at present. He says that some weeks ago he grew tired of life and shot himself in the head with a pistol. The bullet made a large hole in his forehead and had evidently gone into his head. However Layton did not die. He did not apparently even grow worse. On Tuesday he was taken to the hospital at Conneville. There the surgeons made a startling discovery. The bullet had not gone straight into the brain. The surgeons were able to trace it for six inches into the man's head by the hole it had made. They could not extract the bullet, and think it lodged in part of the bone at the base of the brain. The man's statement that he shot himself in the head three weeks ago and has not lost the power of his mind seems incredible. His case is an anomaly in the medical history. Only one case has ever before been recorded similar to it.
