Whistling Trees.

The musical or whistling tree is found in the West India islands, in Nubia and the Sudan, says Tit Bits. It has a peculiar shaped leaf, and pods with a split or open edge. The wind passing through these sends out the sound which gives the tree its peculiar name. In Barbadoes there is a valley filled with these trees, and when the trade wind blows across the island a constant moaning, deep toned whistle is heard from the hills in the still hours of the night has a very weird and unpleasant effect. A species of acacia which grows very abundantly in the Sudan is also called the whistling tree by the natives. Its shoots are frequently by the agency of the larvae of insects, distorted in shape, and swollen into a globular bladder from one to two inches in diameter. After the insect has emerged from a circular hole in the side of this swelling, the opening played upon by the wind, becomes a musical instrument equal in sound to a sweet toned flute.

There are a great number of people who will tell you that whiskey is not good—that they tried it, and it proved of little or no benefit to them, and that they didn't know what the doctors were about when they prescribed whiskey for indigestion, consumption and many kindred complaints. The reason for all this is easily found—These people have never used

ABSOLUTELY PURE LIQUORS

simply because they never knew where to buy them. What an amount of suffering could be saved, had these people sent their orders to MAX KLEIN, Allegheny, Pa.
