State Horticultural society.

Saturally Lazy, but Will Work if It Must-A Crop For Poor Soil. REARING QUEENS.

I have found a good friend in the southern cowpea, and I always believe Three Essential Points Stated by an Experienced Beeman.

To rear good queens, equal to those as they stand by me. I consider the reared under the swarming impulse, southern cowpea as God's best mathree essential points must be observing a point of the poor farmer. I make that statement with reference to the They must be reared from small poor farmer and poor soil because I arms. Those 12 to 24 hours old are arms sure that my friend, the cowpea,

arm sure that my friend, the cowpea, works best in poverty. While it is well adapted to the poor farmer, the rich farmer may also make good use of it, for it is a crop for a poor soil.

This means he lars saved to you. In our eagerned the lars are that my friend, the cowpea, works best in poverty. While it is well adapted to the poor farmer, the rich farmer may also make good use of it, for it is a crop for a poor soil.

Do not confuse the southern cowpea.

In our eagerned that my friend, the cowpea, works best in poverty. While it is well at the rich farmer may also make good use of it. colonies well supplied with young bees The young bees do the nursing; there that strong, well developed queens around the strong, well developed queens around the strong well developed queens around the strong well developed queens around the strong well arou

They must be either reared during good honey flow or, in the absence of this, liberal feeding must be practiced.

The cowpea is a crop for the poorest field you have. It should go into the weakest part of the rotation. It should be put on rich, strong soil. My They must be either reared during a of it. never be put on rich, strong soil. My experience with the clovers, and espe-cially with crimson clover, is that it neens after the honey season is over. During my 20 years' experience in queen rearing I have tried every methdemands a well fed soil. I do not od which has been brought to public think it will ever make a good crop notice, and I consider Doolittle's method far superior to all others. This might say that crimson clover is like a some tough old scrub. The well bred Jersey must have the best of care and gree. By it we are enabled to have the best of food and then you will get a good yield of butter and milk. There any colony devoted to the production of extracted honey having a queen excluding honey board between the upper story and brood chamber. Remove taste of a currycomb, really seem able two frames from the upper story of to make a fair supply of milk out of

such a colony, and in their place put two frames of unsealed brood. The before in doing this is to draw a large will have a sisterly affection for him. force of nurse bees above to attend to the queen cells. Two days later re-not do as well as the old scrub, and in move another frame from the upper the same way I would say that the story, spread the two frames of brood cowpea is the friend for the rough story, spread the two frames of brood apart-and place a prepared frame between them. By "prepared frame" is either do not care or cannot afford to meant a frame containing a number of use manure or fertilizers. queen cell cups, each supplied with a little royal jelly and a larva about a day old. About 15 cells are as many as a colony should be allowed to build at one time.

In order to improve our stock for honey gathering we must keep a rec-ord each season of our best colonies and rear queens from the stock giving the best results. Have them crossed as far as possible with drones not akin of other good stock. This is accomare present it is good evidence that the plant simply fed on the soluble plished by stocking our apiary with drones not related to our breeding nitrogen in the soil, for the cowpea like all the rest of us, is naturally lazy queens. This is very important and It first looks around in the soil to see nust not be overlooked if we desire to mprove our stock. In presenting the ample supplies of nitrogen are close a hand. If such is the case, it is ill the writer, a Kentucky aplarian, is considered one of the best queen raisers in the country.

In the cat living on mice captured in a trap and crawling under the stove to put on fat. If the soil is poor and but little nitrogen present, the cowpen goes to work to take the nitrogen out of the

Lice on Cucumbers. The standard remedy for lice on cu cumbers, except where plants are very tender, is a weak kerosene emulsion. This should be sprayed on when the lice appear and repeated until they are all killed. The emulsion is made by dissolving a half pound of hard soal or a quart of soft soap in a gallon o boiling water. Add to two gallons of kerosene and agitate violently by oumping through a force pump until the mixture assumes the consistency of cream. When a complete emulsion has been made, dilute to 50 gallons. If this injures the foliage, dilute still further, advises American Agriculturist.

There was one question asked at a ecent horticultural convention which is certainly important—viz. Does the must hold a mortgage on your field for free use of bordeaux mixture tend to one year. It will not grow, like crim is certainly important—viz. Does the free use of bordeaux mixture tend to ripen or lessen the keeping quality of the apple, and does it tend to the early maturity of the fruit?

The only reply was from a fruit is must hold a mortgage on your heat for one pear. It will not grow, like crimson clover, between two other crops. It cannot be recommended as a catch crop to grow between frost and frost. I would recommend the Early Black.

The only reply was from a fruit grower of much experience and sucess, who said: "I have been spraying with bordeaux mixture for three years; fall, when the frost kills down the previous to that with arsenites, and the vines, but when you plow it under in fruit kept much better than it did dur-ing the last three years. It may have een the condition of the weather that ade the difference.
