

House Furnishing ECONOMY

Thoughtless folks look at the price. The cautious ones look at quality. They reason rightly that the cheapest is costliest. Better to have your furniture at a fair price than twice at prices that can't possibly hold any value.

IRON BEDS, \$7.50

A new one in White Enamel, Colonial Blue and Dark Green. Brass trimmings and brass rod on head and foot. The filling in the head and foot is entirely new in design. The finish is equal to any high price bed.

NEW COUCHES, \$8.50

Not the finest we have, but worth all they cost. Covered in red or green figured velour, finished with fringe to match and has a tufted top.

PRINTED LINOLEUM, 55c

It's cheaper to cover your floor with Linoleum than to scrub it. Think of the labor you save and then its more sanitary than a wood floor. A standard grade costs 55c per square yard.

BED SPRINGS, \$4.50

As for comfort the spring is more important than the kind of a bed you have. Our reverse coil spring made of genuine steel tempered wire and warranted not to sag, has no superior.

Campbell & Templeton

"Skoot" Prices on Dry Goods.

We are cleaning up with a vengeance to make room for new goods. All summer lines have been again reduced to make quick sales. Our prices are well worth your while to investigate.

- Shirt Waists 1 to 4 ft. 15c and 18c Lawns and Dimities..... 9c
- 12 1/2 and 15c Fine Gingham..... 9c
- 50c Wash Silks..... 25c
- 25c Sun Bonnets..... 15c
- 25c Fancy Ribbons..... 15c
- Large Turkish Towels..... 11c
- Parasols..... Half price

Special offerings in Fancy Silks, Dress Goods and Muslin Underwear that are tempting enough to inspire a need. If saving dollars is a hobby of yours, come in—we'll encourage the hobby.

L. Stein & Son,

108 N. MAIN STREET, BUTLER, PA.

Dr. Humphreys'

Specifies cure by acting directly upon the disease, without exciting disorder in any other part of the system.

THE CITIZEN.

IRRIGATION METHODS.

Furrow and Flooding systems—In the Case of Fruit Trees, Etc.
Under the furrow method irrigation parallel furrows are flooded leading from the ditch through the field between the rows of the crop to be irrigated. A small opening is made in the ditch to let the water into each furrow. A dam of canvas or earth is placed in the ditch just below the furrow. The ditch just below the furrow is then filled, the water being run at the time, thus holding the water nearly level in that part of the ditch from which it is being drawn. Where the slope of the ground is excessive these furrows must be run diagonally or irregularly in order to reduce their grade and thus prevent erosion of the soil.

IRRIGATION METHODS.

In the case of fruit trees it is generally found desirable during very hot weather to prevent the water from coming into actual contact with the trees, because of the danger of scalding. Flooding the surface also results in some soils in baking and compacting the earth about the trunks and roots of the trees. The furrow system is employed, one or two furrows being plowed along each side of a row of trees at a distance of two or three feet therefrom, and the water is turned from the ditch into these furrows and permitted to traverse them slowly from end to end, thoroughly soaking the ground as it progresses and reaching the roots without coming in contact with the stems above the surface. The necessary moisture is thus imparted to the roots and soil without baking of the surface which might result from flooding. When the trees are sufficiently irrigated, the water is turned out and the water is allowed to run until the whole area has been served. The furrows are then filled with a plug, the whole surface worked over with a harrow and the water is allowed to run until the whole area has been served. The furrows are then filled with a plug, the whole surface worked over with a harrow and the water is allowed to run until the whole area has been served.

IRRIGATION METHODS.

This method also requires the attention of the irrigator and the proper amount of water is kept in each furrow and it does not break out and flood the surface in places, leaving the furrow beyond and beyond the water. One man can take care of a large area.

IRRIGATION METHODS.

This method is also applicable to the irrigation of corn and in fact of any crop whatever which is planted regularly in rows, a single furrow being run between two rows being generally used for such crops. When applicable, it is the favorite method both for its convenience and the economy of water thereby effected. But where the ground is very irregular this plan is often inconvenient, for the reason that the furrows paralleling the rows of crop would upon such surfaces be up and down hill and would therefore carry water. To make this method applicable in such cases it would be necessary to have the rows follow approximately the contour of the ground in order that the parallel furrows might carry water throughout their entire length. The irrigation of irregular surfaces, however, is generally conducted under the flooding system except in localities where, as in parts of southern California, the value of water for irrigation warrants the expense of leveling or terracing irregular surfaces or the application of water through buried pipes, as it is arranged in the water works of cities.

IRRIGATION METHODS.

A modification of the flooding method is the compartment or check system of irrigation practiced in some localities, particularly in portions of Arizona. This consists in dividing the field to be irrigated into squares or compartments by levees or dikes of such height as to cause the water to stand over the entire area of the compartments at one time, the water being admitted to each compartment by means of a gate in the levee. The water is allowed to stand until the soil is properly moistened, the time depending largely upon the character of the soil. The compartments or squares are then allowed to drain, and the water is again admitted to the next compartment, and so on until the entire area is irrigated.

IRRIGATION METHODS.

A Good Lard Sifting Crop.
A crop of barley and peas is very useful for lard sifting and may be raised from Aug. 1 to Sept. 1 in New Jersey. Its field management is practically identical with that of oats and peas. It is not injured by light frost and can be fed through the months of October and November. The yield, however, is very materially influenced by the season. If the weather is cool and rainy throughout the August and September, nearly as large yields may be obtained as from a crop of oats and peas, but if the fall is dry and hot the crop is liable to be very much reduced, as the peas particularly is severely injured by such weather conditions.

IRRIGATION METHODS.

HOOD'S PILLS cure Liver Ills, Biliousness, Indigestion, Headache. Easy to take, easy to obtain, 25c.

IRRIGATION METHODS.

McMILLAN'S FORMERLY IRA C. BLACK & CO., PURE BLOOD, Pure blood means life, health, vigor—no room for disease, where the veins are filled with rich, red corpuscles.

EXPOSITION'S STAR YEAR.

With the best musical organizations that are procurable in America, the exhibition has a list of special attractions of the highest order.

The Exposition opens on the evening of September 8, with the Banda Rossa, Italy's most famous musical organization, as the musical attraction. This band occupies the same place in Italy that Sousa does in this country, and its leader, Giuseppe Sorrentino, like Sousa, is a writer of catchy marches. The band has been in America for nearly two years. During the present summer it has been at the northwest shore lake resorts, where its popularity has been unbounded. While at Lake Harriet, near Minneapolis, Signor Sorrentino composed a funeral march for the late King Humbert, of Italy. Emil Paur, conductor of the New York Philharmonic society, and for the Boston Symphony orchestra, will follow the Banda Rossa at the Exposition, with the Metropolitan Opera House orchestra of New York.

EXPOSITION'S STAR YEAR.

The Crystal Maze, in which young and old will delight to wander in perfect safety, is a new feature. A fine demonstration of what may be accomplished by the aid of electricity will be given in the Crystal Maze. A Day in the Alps, a spectacular representation of a Swiss village covering a period of ten minutes, is given in a darkened room and lasts about 20 minutes. The cinematograph will have new pictures representing the scenes of the South African and Chinese wars taken right on the field of action, besides many other novelties in the way of other events, humorous scenes and oddities.

EXPOSITION'S STAR YEAR.

The main building this year will be a dream of beauty. A peculiar feature in connection with the decorations is that they were fashioned and designed solely by women.

EXPOSITION'S STAR YEAR.

For out-of-town visitors a concession of one fare for the round trip will be made. It is given in a darkened room and lasts about 20 minutes. The cinematograph will have new pictures representing the scenes of the South African and Chinese wars taken right on the field of action, besides many other novelties in the way of other events, humorous scenes and oddities.
