FINDING THE ROBBERS.

ilk Scales, the Milk Sheet and the Babcock Test Do It. By B. H. RAWL, South Caro sually made by our farmers is the ailure to keep books that will at any ime enable them to tell whether they

dairy farmer expense can his herd so that at the end of each month he determine that he has realized on each an-imal in the herd. Probably most irymen can at the end of each

the cost of food

and labor for the month and

in this way tell

are doing busi-

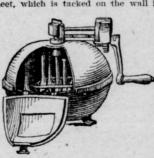

or a loss. The

making or losing MILK SCALES. money. But that is no reason why there should not be a constant lookout for leaks, because of unprofitable cow in the herd had far better be sold at beef prices than kep in the herd to reproduce her kind and continually reduce the profits of the

milk sheet and the Babcock test the dairyman can cull out every unprofita-ble animal from the herd with but little trouble and expense and at the same time determine at the end of each month what his total profits are. The first cut shows milk scales which will cost from \$3 to \$4, and should be suspended in a convenient place near where the milk is received from the pails. On the dial of the scales is a hand, or indicater, that can be adjusted by a thumb screw. Though the capacity of scales of this kind usually ranges from thirty to sixty pounds, the face shows only ten pounds, and each pound is subdivided into tenths. The indicator should be

adjusted so that it will stand at 0 mark when the empty pail is hanging on the scales.

Where several milk pails are used it will be necessary for them all to weigh the same, so as to use the same scales. This can be done by using all pails of the same size and make and by run-ning a little solder on the bottom of each, which can be scraped down un til they all weigh exactly the same. As the pail that contains the milk from first be hung on the scales, and while hanging there the weight (which is the weight of the milk, not including the

arm's reach from the scales. The pail milker is ready to begin the next cow. with complete outfit for testing both milk and cream, can be purchased from any creamery supply company for \$9 or \$10.

Alluring Ginseng Culture. In the transactions of the Iowa Stat Horticultural society appears the statement of M. Harrington that from beds of ginseng forty feet long and five feet wide, including the path between the beds, he secured \$55 worth of dried root and \$16 worth of roots for replanting the bed. He believes that had he dried all the roots the cash value would have been at the rate o about \$15,000 per acre. In 1904 a patch of one-seventh of an acre produced over 600,000 seed with an estimate 000 per acre. "At the rate of" is an illusive phrase and, figuring on it opens up visions of a Golconda fre-quently never found. Growing pota-toes on a plot of a few feet, for instance, "at the rate of 1,000 bushel per acre" is a very different propos BESSEMER & LAKE ERIE RAILROAD

Where the Corn Grows. The greater part of the corn crop of the United States is produced in the Mississippi valley south of the lower limits of the great lakes and the south ern boundaries of Minnesota and South Dakota and north of the Ohio river and the northern boundaries of Arkan-sas and Oklahoma. The production of this region, together with the crop of Texas, amounted in 1904 to 1,574,000,-000 bushels. In 1902, 1903 and 1904

Perfectly Harmless. Dr. Mann, an enthusiastic lover of snakes, contributes to a recent Eng-lish volume a letter which goes to show that the larger kinds of these creatures "may have far more charac-ter and emotion than they are generally credited with.

"My present boa," he writes, "al-ways sleeps in my bed around my feet He is perfectly clean, lies still and very seldom disturbs me. Occasionally he crawls to my face to lick it. I frenently take a python to bed, but at resent she is timid, and if she cannot find my feet crawls out of the bed and curis herself on the floor.
"I do not myself believe that any

python or boa is savage, but they ar adfully timid, especially from the treatment they receive when first caught and the misery and terror they endure on the voyage. There is another thing: They have no cyclids and or forth to the light suffer from the glar very acutely. It is best, therefore, to hide their heads in your hand or unde

"Handle them often and give then water, pressing their heads gently into it. I feed my boas frequently from my hand, but the last time I offered a python a guinea pig the prey escaped, and the python took in the whole of my hand instead. He soon discovered his mistake and was greatly distresshis mistake and was greatly distress-ed, rubbed his head against my hand and seemed to fear some sort of pun

difficulty in persuading him to eat unless I nurse him or take him to bed, when he will lie the whole night with his head in my hand."

Christmas joys soon fade-but the gift of a new pass book to a wife or child remains a thing of beauty and a joy while life lasts. Then think of the incentive it would be, especially to the young—to add to the amount 'till Christmas comes again. Wise parents should think this out and act upon it. Why not think it out to-day? Come right indon't hesitate or the good will never be
