- The Penn. R. R. Co. after the meeting of its directors to meet in Philadelphia, Wednesday, announced that it would issue a \$30 million bond, good in the hands of any one or number of persons, to be followed later by a new tariff reducing the maximum one way fares from \$1 and 5 cents to 21 cents a mile to any point on its line east of Pittsburgh and Erie.
- The destruction of so many barns by lightning during late electrical storms will, probably, increase the interest in what we call "lightning rods."
- A "lightning rod" is undoubtedly a good thing if it does the work—that is, turns the fire-fund from the barn to the ground. The objections to them are that they are too small, are fixed too close to the buildings and cost too much. A string or two of old oil-well tubing, two or three feet above the combing of the roof, laid in place by wooden up-rights and connected to the ground, would, probably, do as good work, and would cost less.
- Electrical storms are among the strangest phenomena of nature that a human being becomes accustomed to. How the clouds originate is known to almost everybody, but how the tremendous amounts of electricity in them, is generated is known to nobody. Storms have always been credited with some strange attributes, among which is the sowing of milk, but they have another not generally known—the breaking of watch springs. On Saturday last (before the electrical storm of the night before) one of our jewellers put in eight new watch springs though he had had none to put in for three months before, and he says he has known them to snap during an electrical storm, "Wag loose in his desk."
- Why is Newton "The Piano Man."
