Agricultural.

The Farm and the Garden.

The B. st n Traveller says, that it has been discovered that for the generality of flowers, and more especially for geraniums, and the most delicate specimens of the lily tribe, commen glue diluted with a sufficient portion of water, forms a richer manure than guano or any other yet discovered. Plants placed in sand on the worst soils, displaying more beauty and vigor when watered with this composition, than those grown in the richest would and only sprinkled with water.

The best Soil for Fruit Trees.

After almost a half century of experience in raising fruit, we are decidedly of opinion, as a general rule, that the best soil on which to raise fruit, is that just cleared of a forest. The surface should be rolling or descending, and moderately dry and rich. Such ground needs little or one preparation; the roots of the forest trees as they decay, keep it loose and mellow, and afford the exact food necessary for a rapid and healthy growth of the fruit trees; and the soil abounds plentifully in those elements which are requisite to form the most perfect fruit. Another consideration, and a very important one is, that fruit trees grown on recently cleared forest land, are much less diseased than those grown on old land, and the fruit is not near so liable to be attacked by insects.

Any one going from an old settled country to a new one, will not fail to observe the remarkable difference between the trees and fruit of the one and the other. How much thriftier they are in the latter than in the former, and how much larger, fairer and more perfect the fruit.

We would advise those contemplating setting out new orchards, if they have no wood land to clear for this purpose, to set apart as much as they desire for fruit, and let it grow up with young forest or other trees as rapidly as possible. Even a few years' growth will answer a good purpose, provided they are cut down and allowed to lie on the land; and when dry, burnt off where they are, and the ashes permitted to remain. This is undoubtedly one of the best preparations and manures-if we may so use the term-that can be obtained.

In growing peaches &c., we have found -other things being equal-that new orehards usually did best planted on old orchard ground, the trees set as near as possible to the decaying stumps. Previous to planting, however, the soil should be broken up at least two feet deep, if possible, and ashes and such other fertilizers added as are necessary to insure a good growth.

Granite soils are among the best for " fruit, as this rock abounds in feldspar and mica, both of which contain potash-feldspar more than mica. As these rocks disintegrate and enter into the composition of the soil, they supply one of the most necessary elements for the formation of good trees and fruit. We will also add that some of the best orchards which we have seen, were on alluvial (loamy) soils. lying upon limestone rocks which came up near the surface-American Agriculturist.

Pomology. - There are few studies -more interesting than pemology. With the imperfect knowledge of the science possessed by the ancients, they did much to improve the fruit of their times. New developments have been made at various periods from its first cultivation to the present time. During the past fifty years, by the aid of the science, large accessions have been made to our fruit, and many new varieties produced of superior excel-

The apple stands at the head., From the small sour crab, have been produced the pippins, greenings and spitzenburghs, and other fine sorts. Next comes the pear-from what Mr. Downing calls "the most austere of all fruits, a native of Europe, Western Asia, and China," have been produced all of our choice pears.

From the bitter almond of Persia we have the luscious rare-ripe and melocoton peaches. The acrid wild plum has been changed to our best Gages, Jeffersons, Washingtons and many others equally good. We might introduce all our small fruits to show the improvements that have been made in them. All this has been accomplished by aid of pomological science, by producing, re-producing and investigating the habits of fruit trees, experimenting and studying the nature and causes of the different diseases of trees, and the habits of the numerous tribes of insects that infest trees and fruit.

A wide field is yet open for operation. Although we are every year presented with new varities of fruit, it needs disorimination to select the good and reject the poor. New enemies present themselves for notice. Their habits are to be studied, and the best way to destroy the ovil.--Michigan Farmer.

Will the Drought do any Good.

The drought, while it destroys vegtation, destroys also the innumerable animalculæ that infests the soil. The weevil, the army worm, the bugs and insects that from year to year, do so much damage to crops, will be destroyed with the vegetation this year. The animalculæ that produces the potato rot must perish in the parched earth; and the countless swarms of insects that yearly render a large portion of our grains, fruits and vegetables unwholesome for food, will be swept out of existence. The soil and the atmosphere are becoming purified as by fire, and prepared for a more healthful and vigorous vegetable and animal life hereafter. During a series of productive years these vermin accumulate till the earth and air need such purification. The destruction-of-the-crops with the vermin, is a great present loss to small-grain. But the future crops and future health of the country may be materially improved.

Improve Your Stock.

Occasionally we meet those who comdain that they can do nothing towards obtaining an inproved breed of animals because they cannot afford to avail themselves of imported or superior animals to begin with. To such we would hint that all the improved breeds now commanding high prices must have sprung originally from common stock. Some particular male or female must have been selected for some special good quality, and this good quality would be inherited more or less by the progeny of that particular ani-This must have been the startingpoint of the most celebrated breeds of domesticated animals. 'Certain animals having some special superiority, must have been selected for breeding; and this quality being sought after and aimed at from generation to generation, and every auxiliary which good judgment could suggest in feeding and management, being brought to assist in the development of the quality or qualities desired, at length a bread of animals celebrated for some particular point of excellence was obtained.

Now if in this way all our distinguished breeds have been produced in the past and in foreigh countries, the secret is at the service of those who think they cannot afford to get a good animal or the use of one to commence breeding from. But this may be only an apology for indiffer. this may be only an apology for indiffer ence, or for a very questionable economy It will take generations, perhaps, to improve at home up to a point that one may start from by the expenditure of a few dollars.—Albany Cultivator.

To Secure Bacon from the Fly.

A writer in the American Farmer recommends as an infalible remedy against the fly :-- When your bacon is smoked early in the spring before the fly has made its appearance, take quick-lime slackened to a dry powder, and rub the meat thoroughly on every part with it, leaving it to adhere as much as possible; hang up your meet, and rest secure from any trouble from insects. We have for many years rubbed our hams with hickory wood ashes, and then packed them up in ashes in close casks, with tight-fitting tops, and and we have yet to find the first insect in our bacon. We think ashes preferable to lime, and are much pleasanter handling in packing away, or in getting rid of when the hams are required for use .-Germantown Telegraph.

The first Sheep introduced into any part of the present territory of the United States, were brought from England to Jamestown, in Virginia, by the London Company, in 1619. In 1648 the number of sheep in that colony had increased to three thousand. The first Cattle brought to America from Europe

were imported by Columbus in his second voyage, in the year of our Lord, 1493.

PRUNING.—Towards the last of the month [October] pruning may be done with propriety. Cover the wound with shellac dissolved in alcohol—apply it with a small brush. Shape young trees in the nursery. Transplant apple trees. There is no better time.—Aew England Farmers of the subscribe, fine his stand and supply of fresh Water Crackers.

MAP OF CUMBERLAND COUN-TY.—From entirely original Surveys, by actual arement throughout the whole county, by H. F.

measurement throughout the whole county, by H. F. BRIDGENS.

The subscriber is now engaged in making Surveys preparatory to publishing a new and complete Map of Cumberland County, upon a large scale. Every Publis Road and Stream, with the locations of all Mills, Stores, Dwellings, and Public Buildings, will be accurately laid down. All the Public Buildings in the County will be distinctly indicated, and the names of owners of property generally, will be inserted in their proper positions on the Map.

A Tablé of distances, Statistics of the County, enlarged plans of the principal Villages, and a few of the most attractive views in the County, will be inserted in the margin; thus giving every satisfaction, and rondering the Map most valuable to the Owners of Property, Merchants, Travelers, Conveyancers, and the inhabitants generally, of the region delineated

In as much as this work is to be made up of actual surveys made upon the ground, it will require time to accomplish it; it is not expected, therefore, that it will be ready for publication much under the period of Two Years. The size of the Map will be about five feet by four, and will cost five dellars.

Sept. 27, 1854.

THILSON'S PATENT VENTILA-TING FURNACE.—The subscriber would call the attention of all parties requiring a desirable Furnace of Chilson's Celebrated Warming and Ventlatine Ap-

to Chilson's Celebrated Warming and Ventlating Apparets.

The reputation of this furnace is now known, having been introduced during the past five years into about 1500 public buildings and more than 8000 private dwellings; this together with the immense increase of sales every year is the best evidence that can be adduced of its superiority over all other furnaces. By the use of Chilson's Furnace, you secure the following advantages. Free Ventilation:

PURE AIR—The heating surfaces being at a temperature that willbird despecate the air.

Economical Use of Etyl.

Great Durability—Being made entirely of Cast Iron's not liable to rust, will require no repairs during a lifetime it is easily managed, and will not exprest be building in which it is placed to danger from the, like the other furnaces.

We have the testimentals of hundreds of the most scientific men to attest to the truth of the above statement, all of whom pronounce it to be decidedly the best furnace yet invented for producing a pure and healthy atmosphere. We herewith annex the names of a few well known and eminent professors, who have used them, and kindly furnished us their rames and references:

Prof. John S. Hart, Prof. Parker, Prof. Norton, Preg. Win, II, Allen, Prof. Parker, Prof. Danalds, Prof. B. Stilinan, Prof. Rippley.

Wm. H. Allen, Prof. Parsons, Prof. Danalds, Prof. D. Culliman, Prof. Ripley.

NINE SIZES.

We have introduced this segs in five new sizes, so that all parties may avail then selves of this great improvement at a very moderate cost. We are now prepared to furnish an apparatus to warm a single room, or the largest building in the country.

No. 1 Pertable. Complete, \$25

2 do 35

for brick work 3 Extra Radiator, (with Bars and French Plates,)

5 do do do 107
6 do do 133
This No. 6 is the largest and most p werful Furnace made in this country, and is admirally adapted for Churches and other large class buildings.

We continue to sell the apparatus at the same price as when first introduced, five years ago. Althe ugh the present high price of iron has increased their cost 25 percent, owing to their great weight, still we are enabled by the great increase of sales to funnish the article at the lowest possible price. One foundry alone, Messrs. Warnick & Leibrandt, have contracted to furnish us with 600 tons of Furnaces this season, so that we are now prepared to furnish them wholesale or retail. We superintend the erection of all Furnaces, when required, and warrant them in all cases.

METROPOLITAN COOKING RANGE.—We have also the most complete Cooking Bange that has yet been introduced, to which we call the attention of all who may wish to secure the most perfect and decirable cocking apparables ever invented.

EMERSON'S PATENT VENTILATOR.—We are the only Agents in Pennsylvania for the marufacture and sale of this Ventilator, which is acknowledged to be the only perfect Ventilator over made for correcting the deaught in smoky chimmies, and for ventilating unide

only perfect Ventilator over made for correcting the braught in smoky chimnies, and for ventilating utila-ings of all kinds. As there are a great many imitations of this valuable article now affered for sale, parties will careful to examine that it has the Emerson I adje at-

Atched.

PATENT REGISTERS AND VENTILATORS.—We have the largest and most complete assortments of Hot Air Registers and Ventilators to be found in the United States. Parties who wish to purchase either for private ways or wholesale will find it creatly to their advantage.
