Agricultural.

Investment of Capital to Farmers.

Any farmer would readily understand hat a merchant who should invest his gains, apart from his business, as rapidly s realized, would be unable to increase he amount of his operations, nor would te be able to increase his credit by eashng his own obligations, or advantage by wer prices by being the cash buyer. The me hanic too, he would readily unlerstand, should re-invest his gains in his urrent business, until he was possessed f all the tools which would enable him cheapen the cost of production. AlL his is too plain to be misunderstood, but trange to say, in his own business the arm r seems to forget these facts; for then commencing on a badly appointed erm, with an insuffluency of tools and ortilizing materials, he by extreme econmy, and the performance of a greater in sunt of labor than the continuance of all health will permit, accumulates a unall sum; he invests it on mortgage for he purpose of realizing an interest of even per cent, instead of using it in his tsiness, where it might produce a much arger result. We could point out hundreds of farmers at this time, with farms tarying from 50 to 200 acres each, whose gross receipts are less than those of others who farm in a better manner one-lifth the quantity of land, and whose land by such superior farming is doubled, trebled, and sometimes quadrupled in value.

Let us suppose a farmer with land of ordinary quality, but slovenly cultivated. 29 be able to realize a profit beyond his current expenses of \$200 per annum.— This, if expended upon but a small portion of his farm in the purchase of proper Certifizing materials, would increase his sarplus income at an early date, to \$400, which in turn would furnish the fertilisers for a still larger portion of his farm, and thus produce a surplus income of \$800 per annum. He would then be positioned so that he could afford an increase in lepth of plowing, and the use of subsoil plows, besides keeping up a full ratio of fertilizing materials. This would give a still further increase in results, and cause a less amount of fertilizing materials to produce an equal or greater amount of crops. He could now appeal to the use of under-drains, which by the long experience of English farmers have proved capable of increasing the value of every farm one-fifth, besides paying for themselves by increased results in five years or less. His income then, with such additions, would enable him to prepare the arrangement we have so often recommended for the compost heaps, all the improved tools necessary for the cutting of fodder, and apparatus for the cooking of hogs' feed, &c. Indeed all the current improvements of the day might be adopted, and the farmer adopting this system would find that at the end of a few years his farm would be increased in value, much more than would have been the increase by the investment of \$200 per annum on his old system while the ability of the farm itself, would enable him for all future time to invest a thousand dollars or more per annum, instead of \$200, as formerly. His crops would be produced with less labor, and at the end of a term of years, he would find himself much more wealthy than if pursuing the skinning system, and the investment of small and hard-earned gains on mortgage .--Many farmers who have hired farms which would sell readily for \$25,000, live on \$1,000 per annum, and invest perhaps \$500 on mortgage, while the value of the farm, \$25,000, placed at interest, would produce \$1750 per annum, and without any labor on their own part; but the proper investment of this \$500 per annum on such farms, would soon enable the occupant to invest a suin each year equal to the interest, or even its increased value, besides supporting his

family. Few farms are appropriated to such crops as will pay the best profit. We often find farms near large cities, which are particularly well suited for the raising of such crops as cannot be brought from a distance, producing hay, oats and corn, in competition with cheaper lands in western New York and Ohio, instead of raising such crops as would not meet the same amount of competition; and even on farms so situated, and of sufficient extent to warrant the use of mow-· ing and reaping machines, etc., the hand scythe is still used. All seeds are sown

by hand, and the cattle of the farm are seldom if ever, fed with roots at all; and while carrots and parsnips may be sold, as this year, at 50 cents per bushel, a thousand bushels may be raised to the tere, we find these farmers still following he routine of their grand-parents, and efusing to raise root crops at all. At very turn we see the necessity for the establishment of a Department of Agriculture, which would place these facts in a statistical and dependable shape before the farmers. There is no reason why the farmer who understands his business thoroughly, should not enjoy the same amount of average profit as the merchant or mechanic, who exercises the same amount of talent-with a similar amount oa capital, but still it is true that thousands of farmers fail to realize an income which would DR. C. S. BAKER respectfully offers his professional services to the citizens of Carlisle but still it is true that thousands of farmequal the value of their land if placed at interest, while its proper management would insure an income of twice or more than now realized.

WINTER STOCK.—Much of the profits of rearing cattle depends upon the manner of keeping them through the winter. If they are suffered to lose flesh during the cold season, and turned out to pasture "spring poor," it takes a long time to regain what they have lost. With the best quality of early cut and well made English have with regular and indicious. English hay, with regular and judicious feeding and comfortable quarters, a stock of cattle, from the oldest to the youngest, may be made to thrive all winter, to gain size and flesh: with a small allowance of meal, possess, turnips or other. roots, the next scientific principles. Discusses of the meal, possess, turnips or other. roots, the next scientific principles. Discusses of the meal, possesses, turnips or other. roots, the next scientific principles. Discusses of the meal, possesses, turnips or other. roots, the next scientific principles. The next scientific principles. The next scientific principles. The next scientific principles. The next scientific principles are scientific principles. The next scientific principles are scientific principles. they would do still better.

Our horses, eattle and sheep were or iginally constituted to subsist the year round on green and succulent food.

By domestication they have been gradually introduced from a warm to a cold climate of the north where as with us they generally have to be fed on dry forage for six months or more every year. This, in some degree, is placing them in an unnatural condition, and it seems to us, it is a strong argument in favor of a more extensive root culture among us,

for feeding purposes. Most farmers have more or less coarse fodder, such as poor hay, corn fodder, straw, &c. And many commence feeding their cattle exclusively on these the first part of the winter, or till it is used up, and seem to think it is a "good rid-dance of bad rubbish." Cattle and sheep. doubtless, like a change of food as well as man and when kept in a good condition they seem to relish a foddering of meadow hay, corn-fodder or straw occasionally; but if fed entirely on such fodder the first half of the winter, they lose flesh and will be apt to come out in the spring in a poor condition, in spite of English hay. Corn-fodder is as nutritous as common stock hay, when fed in connection with it, but to compel cattle to live on such fare for weeks together, i as some one has said "absolutely eruel" as it make their teeth sore when fed for a length of time. A better way is to give eattle one foddering a day of corn butts, and that at the last feeding at night, and if they have a pretty stout allowance given them they will eat nearly clean be fore morning—at least what they reject will hardly pay for passing through the straw-cutter. Cattle, to do well, must have drink as well as food; and a free use of the card and brush adds to their good looks.—Granite Farmer.

VALUE OF A SCHOOLMASTER.—There is no office higher than that of a teacher of youth, for there is nothing on earth so precious as the mind, soul, and character of the child. No office should be regarded with greater respect. Parents should do all but impoverish themselves, to induce such to become the guardians of their children. They should never have the least anxiety to accumulate property for their their children, provided they can place them under influences which will awaken their faculties, inspire them with higher principles and fit them to bear a manly, useful and honorable part in the world. No language can express the folly of that economy, which, to leave a fortune to a child, starves his intelect and impoverishes the heart.—Channing.

PROVISIONS FOR THE ALLIES.—A firm at Albany, N. Y., received from Chicago, Ill., a few days ago, and forwarded, a cargo of "Extra Indian Mess Beef," weighing 110 tons, consigned to a firm in London, and intended for the Crimea. It was packed at Chicago, and the charges paid on it for transportation to Albany amounted to over one thousand dollars.

PATENT HONEY.—The Cooperstown N. Y.) Times says there is a Yankee in that town selling rights to manufacture honey. The editor has tried the honey, and pronounces it "beautiful in appearance and delightful to the taste." made principally from sugar, and can be afforded at one shilling per pound. What shall we have next?

Professional Cards

THING FOR YOUR OWN BENEFITT! A Medicine adapted to general use, greatly superior to others, and within the means of every individual.

100 PHLES for twenty-five cents! No extortion in price—no Caland—no mineral prison whatever.

Dr. Townsin's HEALTH PHLES fully merit the great reputation they have acquired. They are called for from all parts of the land, because they are called for from all parts of the land, because they are all that they are

adl parts of the land, because they are the they are all parts of the land, because they are the blood they will to be.

WHAT THEY WILL DO—They purify the blood they dense the System of Humors, they cure Dyspepsia and halifection, they create an Appetite, they cure Sick Headache, Dizziness and Low splits, they arest fevers, they promote a healthy action of the Liver, they are a sure cure for Costitoness and Habitual Constipation, they are highly efficacions in Female Complaints, they strengthen and give tone to the System. They are the best Family Medicine known.

It is an obvious inquiry, how one medicine can cure so many different complaints. These Pills however, are so compounded of curative materials that persons have only to TRY THEM and the answer will be found in a restored body and an invigorated constitution.

Each Box contains 100 Pills, at the astenishingly low price of 25 cents. Every individual should have them. For sale by the Druggists and Storekeepers generally F. A. Palmer, general Agent, Stonington, Ct.

DATENT SELF-SHARPENING A TENT SELF-SHARPENING YANKER FEED CUTTERS, manufactured for ALDRICH & SARGENT, No. 410 Market street. Philada This cutter is superior to any now in use, for strength durability, and simplicity of construction: it cuts faster, and is the only solf sharpening Hay, Straw and Corn Stalk Cutter over made. It has but ONE STRAIGHT KNIFE, which any person can grind and set with ease, but in ordinary case, is ground in the machine. Thousands have already been sold, and the demand is delly increasing. In most cases an examination is sufficient to convince one of its superiority. No one after a short trial would part with it for any other. All slaces of the above constantly on hand and for sule by J. P. LYNE.

OTT'S PATENT FARMERS'
ROILERS.—These possess an advantage over all others in being made with an outside iron casing, which greatly economises fuel and provents loss of heat. They are made of various sizes, from 10 to 120 gallons. They are portable, and may be set in the kitchen for household use, or out of doors convenient to the barn, pig pens, &c., for bolling food forstock. For sale by PASCILLIL MORRIIS & CO.,
Agricultural Warehouse and Seed Store, N. E. corner of 7th and Market streets, Philadelphia.
