

## Agriculture.

In the old countries of Europe, where bur is cheap and land dear, the object wee on which it is cmployed. There con wot be a mure rational principle in the ode of agriculture, than that every farm hich is in good heart should be liept so hat every one not in gond heart should min so, ald that what is right as to the very farm. Any system, therefore, or ant of system, which tends to make a ch faria pior, or does not tend to mak waer. The profit where there is any will ot bance the loss of intrinsic value astained by the land. The neglect of
amures is a great error which clams paramures is a great error which elames par-
icular notice. It may be traced to the ame cau e with our execsive cro ,ing. In the early stages of our agricul are, it was more convenient and mome rontable to bring new land into cultiva Sothing is more certain than that coutin al croppiug without marure deprives the of its fertility, it is equally certain, hat fertility may be preserved or restor-
d by giving to the carth animal or vega able manure equirulent to the matter taen rion it. The Chinese it is said smile It the idea that land needs rest, because
ndustrious use is made of cvery fertiliindustrious use is made of cvery fertih eplathine what has been drawn from it and this is the more praticable with hem, as almost the whole of what is rown on the farm is consumed within Il that amnually grows on it, preven if that annualy grows on it, prevents en in our forests, where the anmalal foertility of which they deprived the earth. The wost eligible mode of preserving the farm is and of enrichngg the poverty of he scil a sufficiency of animal and yore able matter in a putrifi $d$ state in orde procare which, to much care canuot bserved in saviug every material furnish d by the farm. This resource wasmmong he earliest discoveries of mon living by made a test of guod husbandry in all coun ries, ancient and wodern, where its pins most gratifying to witness such a spinit ayricultural excitement in Cumberland ,unty. What a plieasure it will afford every land holder, if by a proper system Hy increasing and his expences diminish. ug in proportion, whilst his estate is contantly rising in value. In spring he asts a cheerful regard around him, buoy ant with hope while his exulting thoughte aturally asecnd to the bestower of all est with gratitude, for the blessinge of uperintending providence. In autumn rove upon the procecding year, and ro oices that iacrensing resources, provi' or an increasing family. In the winte he haurs the tempest how! in win-his rork is cullected to defeat the cold, hi arms supplics cerery necessary, and whic
his cattle are woll sheltered and well fed by his provident care. HAMPDEN S

The Cut and Wire Woms.-The White grub or cut worm has been very de tructive in my con-lield and also th wo thick that I could pick a handful from he furrow in poing four rods. So, soon fter planting and before the corn was up I put on every hill about a gill of ashes, was in proportion a bugeher the compos of lime, and four quarts of salt a pect orn came up looking flne, and at fis hoeing scarcely a hill was touched by the crub. They worked a little after, but did litelyy en hills to the acre. If any are likely to be troubled the present sea or, I would advise them to try this.

Another Remedy for mie Coin ur: -A Ah that to take o round stick two aches in diameter, pointed and with it
nalke from two to four holes about each
