

Agricultural.

Meteorology for the Farmers—A Suggestion by Lieut. Maury.

In the number for August of the American Farmer, we find a paper from the well known scientific gentleman, Lieut. Maury, U. S. Navy, suggesting to the farmers generally an plan for securing a more intimate acquaintance with the influences which surround them in the atmosphere, from which they may derive advantages in their profession equally as important as those which have been secured to the mariner by the method of observation so extensively carried out at sea under his auspices. Lieut. M. asks for co-operation in his plan, which he says is "very simple, and calls on the farmers for little more than good will;" and considering the source from whence the suggestions on the subject come, we should think they would command the attention of all intelligent men, and enlist the ready efforts of the friends of agriculture in all quarters—thus demonstrating that the farmers have as due an appreciation of such undertakings for their benefit and for the advancement of science as the men who "go down to the sea in ships." Lieut M's suggestions are as follows:

I first want authority to take the preliminary steps, and to confer with other meteorologists and men of science at home and abroad, with a view of establishing a uniform system of meteorological observations for the land as we have done for the sea.

If any officer of the government were authorized to say to the farmers, as I have to the sailors, here is the form of a meteorological journal; it shows you the observations that are wanted, the hours at which they are to be made; tells what instruments are required, and how they are to be used; take it; furnish government with the observations, and in return the government will discuss them and give you a copy of the results when published—he would have at once and without cost a volunteer corps of observers that would furnish him with all the data requisite for a complete study of both agricultural and sanitary meteorology.

Could not at least one farmer be found on the average for every county in every State that would gladly undertake the observations? I don't think there can be any difficulty on that score. Sailors have been found to do as much on every part of the sea—on an average ten observers for a State would be sufficient.

Now if we could get the English government, and the French government, and the Russian government and the other Christian States both of the Old world and of the New to do the same by their farmers, we shall have the whole surface of our planet covered with meteorological observers acting in concert and eliciting from nature under all varieties of climate and circumstances, answers to the same questions, and that too at no other expense than that what each government should choose to incur for the discussion and publication of the observations that are made by its own citizens or subjects.

What is wanted in a system of observations like this is uniformity. Hence co-operation—an agreement to observe the same things at the same times—is essential to anything like success. We want not only corresponding observations as to the time, but we want them made with instruments that are alike or that can be prepared; and then we may expect to find out something certain and valuable concerning the movements of this grand and beautiful machine called the atmosphere.

If you ask me to state beforehand what particular discoveries or special results of value I expect to make, I answer if I could tell, I would not ask your assistance to make them. The fields meteorological are large—there, are many of them, and all that I do know about them is that there is in them mighty harvests of many sorts.

Some years ago I commenced such a system for the sea as I am now advocating—and as I now both see and feel the necessity of for the land. After we had been at work a little while and begun to gather in a harvest of useful results, by

discovering new truths and facts, Congress authorized the Secretary of the Navy to employ three small vessels of the navy to assist me in perfecting these discoveries and pushing forward investigations.

Now you would have said, what two things can be more remote than maps to how which way the winds blow, and a sub-marine telegraph across the Atlantic. Let it seem they are closely connected, or researches undertaken for the one are found to bear directly upon the other.—Among the early fruits gathered by pushing forward our system of such discoveries, even with the slender means afforded by Congress—for the Secretary was authorized to let me have these three small vessels only in case they should cost nothing—there is promise of a sub-marine telegraph across the Atlantic.

We are told by the public prints that a company has been formed for the purpose, the money raised, contracts made, and the cable that is to hold the wires and span the ocean has commenced to be made. I have a piece of it now on the table before me.

One of the results in getting the wires across will be to place the farmers with their provision markets and produce exactly half the distance in time—and time now seems to be only the true measure of distance—from Europe that they now are. Let us illustrate the value in one respect only of this telegraph to the Farmers: a demand springs up in England for breadstuffs for instance. The news must now wait for the steamer to sail before it is ready to come, and by the time she reaches our shores, and the produce can be sent forward, the chief granaries of Europe have been ransacked, and the American dealer finds himself too late in the market.

But when the telegraphic plateau, which we have discovered in the Atlantic, shall be threaded with the magnetic cable, the intelligence will be known in New York, Cincinnati, St. Louis and New Orleans as soon as it is in Liverpool.—Straightway the produce is put in motion, and instead of coming in "the day after the fair," as is now too often the case, it will arrive with the young of the flood that comes rolling in from the East to meet the demand. By this achievement, or by the achievements which these investigations at sea have already accomplished in the shortening of the voyages and saving of time, who have been the greater gainers, the farmers or the merchants?

Storms on land have a beginning and an end; that is they commence at one place, and frequently after several days travel end at some other; at least so it is held. What would it be worth to the farmer or the merchant, or to any body, if he could know with something like certainty the kind of weather we might always expect one, two, three or more days ahead?

I think it not at all unlikely that such to some extent at least, would be among the first fruits of this system of observations that I am proposing. Certain of the observers scattered over all parts of the country, would probably be required to make daily reports to the central office in Washington as to the weather, each for his own station—say at 9 A. M. This would soon enable us to determine the laws of progress as well as the march of the various states of weather such as gales, rains, snow-storms and the like; so that by knowing in what part of the country a storm had arisen we should—learning through the telegraph the direction it might take—be enabled to calculate its rate of travel, and to predict within a few hours the time it would arrive at different places on the line of march; and knowing these, the telegraphic agency which the newspaper press of the country has established here, would without more ado or further cost, make the announcement the next morning in all the papers of the land.

I allude this as an exemplification only of some of the first fruits of the plan. I do not suppose we should be able to telegraph in advance of every shower of rain but without doubt the march of the rains that are general, can be determined in time to give the people in some portions of the country at least, warning of their approach.

Such an office as will be required here in Washington, to carry out the details of this plan is already in existence. It was established by Mr. Calhoun when he was Secretary of War, and it is under the control of the Surgeon General of the Army. There the meteorological observations that are made at our military posts are discussed and published; and one of the most valuable and interesting reports concerning the meteorology of climates of the country that has ever appeared, is now in course of publication there. Or such an office might be made a branch of the "Agricultural division of the Patent office." In either case the nucleus for it is already in existence; and the only expense necessary would be on account of

the addition to the force of the office that would be required to discuss the observations after they are made.

I make the appeal to the farming interests especially, because that is the great scheme; and if the farmers do not really care enough about it to use their influence through their representatives in Congress to procure the very trifling appropriation that is required to get it under way, I do not see why I should give myself any further trouble in the matter.

Will you not bring the subject to some tangible shape before the agricultural societies of the country? A simple memorial from them to congress would not fail to procure all the legislative aid necessary.

Some of the leading scientific men of Europe are ready to join us in such a plan; and with authority to confer with them officially, as to details, I have no doubt that most of the governments of the world would undertake, each for itself and within its own territories, a corresponding series of observations, so that we should then be able to study the movements of this great atmospheric machinery of our planet as a whole, and not as hitherto in isolated detached parts.

R respectfully, &c., M. F. MAURY, Lt. U. S. N.

Business Cards.

DR. S. B. KIEFFER Office in North E. corner of 5th and 7th streets, from 7 to 9 o'clock, A. M., and from 5 to 7 o'clock, P. M.

GAS FITTING AND PLUMBING.—The undersigned would inform the citizens of Carlisle that he has made arrangements to do GAS FITTING and PLUMBING at short notice, and on reasonable terms. He has engaged the services of a first rate hand from Philadelphia, and has supplied himself with an extensive assortment of FIXTURES, which will enable him to fill all orders promptly. All work will be warranted. His stock of Gas Fixtures will be found in the room, exactly opposite his Plumbing establishment on North Hanover street, where he invites a call.

TINNING, SPOUTING, &c.—He is also prepared to furnish, or make to order, every article of TIN WARE used by housekeepers and others. He will also attend to SPOUTING, HOUSE-ROOFING, BELL RANGING, and PLUMBING. Thankful for the patronage with which he has already been favored, he respectfully solicits a continuance of the same. MONROE MORRIS. Carlisle, June 14, '54.

FROM CALIFORNIA.—C. VON HILLEN respectfully informs the citizens of Carlisle that he has just returned from California, and is prepared to execute all kinds of work connected with his line of business. He has always on hand a large assortment of ready-made Rifles, Guns, Pistols, Locks, Gun Trimmings, &c., all of which he will sell wholesale or retail. He is also engaged in repairing Guns, clocks, locks, &c.; engraves on brass, copper and iron. He hopes that by strict attention to business, and a desire to please, he will merit and receive the patronage.

All kinds of Fire Arms made to order. Carlisle, April 26, 1854-ly

SADDLE AND HARNESS MAKING.—The subscriber continues to carry on the over street, Carlisle, two doors North of Leonard's corner where he intends keeping on hand a general assortment in his line, consisting of all kinds of fashionable SADDLES, Bridles, Martingales, Girths, Collars and Harnesses, also TRUNKS, traveling and saddle bags. He also manufactures the most approved SADDLES for the country, and those wishing a handsome, durable and pleasant saddle will do well to call and see them. He also manufactures Collars and Whips in all their varieties, and confidently believes from the general approbation of his customers, that he makes the neatest and best in the country. He also makes all kinds of Harnesses to order, viz: Straw, Hush, Curled Hair and Spring Harness. All the above articles will be made of the best material and workmanship, and with the utmost dispatch. WM. OSBORN

PATENT SELF-SHARPENING BANKER FEED CUTTERS, manufactured by ALDRICH & SARGENT, No. 40 Market street, Philadelphia. This cutter is superior to any now in use, for strength, durability, and simplicity of construction; it cuts faster, and is the only self-sharpening Hay, Straw and Corn Sift Cutters in use. It has ONE STRAIGHT KNIFE, which any person can grind and set with ease. In ordinary use, is ground in the machine. Thousands have already been sold, and the demand is daily increasing. In many cases an examination is sufficient to convince one of its superiority. No one after a short trial would part with it for any other. All sizes of the above constantly on hand and for sale by J. P. LYNE, Sole Agent for Cumberland county. oct 1

HERE IS WHAT YOU NEED AT PRESENT.—The subscriber respectfully informs the ladies and gentlemen of Carlisle and vicinity that he has now on hand at his Hair Dressing and Shaving Room on West street, an elegant assortment of LADIES' BRIDLES and gentlemen's WIGS, and can furnish every kind of Hair Dressing at the best quality. He also has on hand a large stock of hair oil, and is prepared to furnish it to his friends and customers more than he keeps constantly on hand a supply of "Sennemanns," an admirable Wash for the hair, manufactured by himself. The excellence of this Tonic is testified to by all of his customers who have used it to be one of the best articles known for curing the hair of dandruff. He also manufactures a Hair Restorative, which he has now on hand, for giving new growth to the hair on bald heads. Ample testimony exists of the efficacy of this excellent Restorative. While the Sennemanns clears the hair of dandruff and prevents its growth to those who have rashes upon their scalp, the Restorative supplies a new growth to those who have lost the misfortune to lose their hair. The public is invited to call, examine and purchase these invaluable articles. SHAVING, HAIR DRESSING, and CUTTING, and SHAMPOONING attended to in the best style as usual, at his old rooms on West Main Street, near Marion Hall, Carlisle, Dec. 27, 1854. WM. BURGESS

DOLLARD, Premium Artist in Hair Dressing and Shaving.—Inventor of the Celebrated Gossamer Ventilating wig and Elastic Band Toupees. Instructions to enable Ladies and Gentlemen to measure their heads with accuracy. Foil Wigs, inches.—No. 1. The round of the head, No. 2. From forehead over the head to the neck; No. 3. From ear to ear over the top; No. 4. From ear to ear round the forehead. Toupees and scalpings, inches.—No. 1. From forehead to back as far as bald; No. 2. Over forehead as far as required; No. 3. Over the crown of the head.

DOLLARD has always ready for sale a splendid stock of Gent's Wigs, Toupees, Ladies' Hair Wigs, Braids, Curis, &c.,—beautifully manufactured and as cheap as any establishment in the Union. Dollard's Herbarian Extractor Lustrous Hair Tonic, prepared from South American Herbs and Roots, the most successful article ever produced for preserving the hair from falling out or changing color, restoring and preserving it in a healthy and luxuriant state. Among other reasons why Dollard's hair cutting saloon maintains its immense popularity is the fact that his Tonic is applied to every head of hair cut at his establishment, consequently it is kept in better preservation than under any known application. It being thus practically tested by thousands, offers the greatest guarantee of its efficacy.

Sold wholesale and retail at his Old Establishment 177 Chestnut street opposite the State House, Philadelphia. He also announces it for sale with perfect confidence in its surpassing every thing of the kind now in use. It colors the hair either black or brown, (as may be desired) and is used without injury to the hair or skin either by stain or otherwise, can be washed off in ten minutes after application, without detracting from its efficacy. Persons visiting the city are invited to give him a call. Letters addressed to R. DOLLARD, 177 Chestnut st. Philadelphia, will receive attention. Jan. 25-1y

LEATHER.—Fritz & Hendry, Store, 29 North 3d St. Philadelphia, Morocco Manufacturer, Curriers, Importers, Commission and General Leather business. WHOLESALE AND RETAIL—Manufactory 15 Mar hts. street. Sep. 7-1y
