G. s. Stewart, Esq., in a recent address bufore the Ohio Aqricultural Society, thus speaks on this subject
Many Farmers are destroyin
Many larmers are destroying the pro-
ductiveness of the farms by shallow work. As they find that their orops are diminishing, they think ouly of extending their
areat byadding acres of surface, as if areas by adding acres of surface, as if
they supposed that their title deeds only gave them a right to six inches deep of
earth. If they will take thowe deeds, stuly their me:ining and apply the lesson stumy their meaning and apply the lesson
tu their fields, they will soon realize in three-fitd crops, the fact that the law has given them three fir us where they sup-
posed there was only one, in other words, that the sub-soil, brourht "p and conn-
bined with the top-soil. and enriched with the atmospheric influences, and those the atmospherie influences, and those
other dewents which arricultural sciences will teach them to apply to their
groman will increase three fold the meas-
are in its productivenes.
Th show to what extent the fertility of
the wil can be inereised, 1 refer to state:sent in the last liment (office Report. competitors for the premiun corn crop of Kcntucky, each of whom cultivated ten
acres. Their areage crop was about $1 \geqslant 2$ 2 acres. Their areage crop was about $1 \geq 23$
bushels to the acre. At that time the average crop of Theat per acre in the tivated for centuries, was almost double to that produced on the virgin soil of
Ohio. Why is this: Simply because British farmers are educated men and apply work wisely. They pay back to
the earth what they borrow ; they en. deavor by every means in their power to enrich their ground, and in turn it enboring to double their acres, would labor to duble their crops, they would find it a vast saving of time and soil, and an in-
crease of profits. ten inches in the soil, unless they have dreamed about a crock of gold hidden in the earth, brizif they would set about digging in earnest, every man would find dreams and divinution
We have a great advantage over Brit nearly all hold thoir lands which they cultivate, in fee simple, while in England thily are tenants, hiring the land of nobriey, prys, besides heary taxes to the prowprieturs, besides heary taxes to the for-
ernment. Taxes are comparatively light, and our farmers are their own landlords. Hence they have been able to pay thrcefuld wages fur labor, to those in Europe and puy the cost of transportatinn; and
yet undersell the British furmers in their yet undersell
own market.

Mread from Grown Floor-Mrs. A. J. Sibly, of Armada, Michigan, gives
in the Michigun Farner, a new receipt for making bread fromengrown flour. As wheat is requently grown in all wheat
regions, it mav be of service to some of our huusckeepers to luve this, receipt, which is as follows: I will wive to your readers; it makes excellent bread.
salt e usise here, I generally, what is called (warm, of course,) Kneading it pretty (warm, of course, meading it pretty
hard; I set it in warm place to rise.
After it was light, I moulded in all the After it was light, I moulded in all the
flour I could, shaped it into loaves and again let it rise. I putin no saleratus, soda or alum. After it became hight, I
baked it slowly about two hours; and I do not think nny one would know that it was once irrown wheat. "You can make very good bread by putting a handfyt of oughly.

Blanketing Cows-- $\Lambda$ correspondent of the Rural Intelligencer, wheo has
been travelling through Holland, says that "great care is there taken of cows, both in winter and summer. In a lowery, wet day you will see the cows in the
field covered with blankets: ny, even more coumonly than a horso is blankered by a greater fiow of mill. and a less consumption of forage.
nen. Ventilate your stables, and keep them properly cleansed.
