

Wheat and its Enemies.

When the enemies of the wheat crop e so prevalent, with a prospect of incase, let our friends take a few timely ints. There is no known remedy for te depredations of fly, chinch, joint orm, &c., but we think experience ill bear witness that there is a grand eventive in good cultivation. A vigoris and thrifty growth successfully rets, when the most promising appliances powerless before, their ravages. And t only so, but throughout nature it . Il be found that where there is least wer of resistance, the subtle enemy is ost likely to make his attacks. It is t the sound and healthy, those who ve enjoyed wholesome atmosphere and od food, who are swept off by epidem-, but those whose constitutions enfecged by any cause, predispose them, as aptly say, to disease. The sleek an ell kept animal is not troubled with ce, when they swarm upon the ill-fed, ill-conditioned" beast. And the enclies of plants, seek their food upon the oor and sickly, where they find as it ere the least resistance against their ncroachments. The principle is uniersal, that "from him that hath not, hall be taken away that which he hath. But, however, this reasoning may be uestioned, the philosophy of sound, byorous, healthy constitution for man, reast, or plant, as a safeguard-against all natural enemies no one will question. For the wheat plant then, begin in time, -ind-make-the-most-thorough-preparation for its reception. So get ready the ground, that it may do the very best of which it is capable. To those who plough deep, and aim to deepen their urface sail af every ploughing, we suggest that some judicious farmers, who would plough deep generally, think it not advisable for the wheat crop We adopt the opinion to this extent, that we do not think a portion of fresh subsoil should be now brought the surface. The natural range of the roots of wheat, is about-three inches of the surface, and for that reason it is desirable to have there the richest portion of the soil.

'As to manures, he who properly uses all other means of success, should put on enough to secure him thirty bushels to the acre. The nearer he approximates that point, the less liable is his crop to suffer from its natural foes.

. Early seeding is a point of great importance. A good growth of root in the fall preserves from winter, is prepared for an early, vigorous start in the Spring. This enables it to resist and outgrow the attack of fly and other insects. And the early ripening is almost an insurance against rust. Where it is practicable, we should sow by the last of September. The only objection to early sowing is. that the crop is more liable to the Fall attacks of the fly: This objection seems in practice, to be far outweighed by the advantages on the other side:

Another important point is that of good, plump, well ripened seed, of a hardy and early ripening variety. -- American Farmer.

The Inventive Faculty.

The greatest lion in Washington, the patent office, is said to be the least visited of all the numerous attractions presented by the Federal capital. And of those who do visit this great repository of curiosities, perhaps nine-tenths depart with the idea that the inventive talent of the country is exhausted, and that it would be utterly impossible not only to discover any new mechanical principle, but to make a new application of those which have already been disclosed. It would seem that work must be superfluous to future generations, and that no. thing need be done by our grand-chile dren but to take things easy, and let machinery perform every office that may require to be performed. That such no tions, however, are unfounded in reality, a glance at the report of the Commissioners of Patents will soon satisfy any one. According to the last Report the number of patents in 1854 was twenty per cent igreater than in 1853, and in 1855 the increase was thirty-three per cent. in patents granted, over that of the preceeding year. In 1854 there were is sued, among thousands of others, no less than nine patents for churns, eight for coin shellers, eleven for cultivators, nine for reaping or gathering grain, fifty-six

for harvesting implements of sundry kinds, thirty-nine for seed planters, sixteen for ploughs and fourteen for straw cutters. This alone in agricultural implements, by way of example. In 1855 nineteen patents were given for locks, ten for knitting machines, thirty one for locks, this institution presents great in looms, seven for various improvements in the manufacture of paper, and forty for sewing machines, of which nine were of Yankee invention.

R. K. BURNS, Principal and Proprietor, April 9, 1856. Plainfield, Cumberland co., Pa. nineteen patents were given for locks, Yankee invention.

It is a little singular that the first de-partment to which inventors appear to turn their attention is agriculture, and next to that they are most dilligent in those branches comprising lamps, furnaces, boilers, engines, and stoves. Twenty-nine patents for stoves were issued last year, twenty for gas apparatus, six-teen for l. mps, twenty-four for boilers, and twenty-seven for steam engines --And yet there is not the least prospects that a diminution of inventive activity will occur, nor that the year 1856 will be less prolific in discoveries than the year 1855 .- Philadelphia Journal.

MARLISLE FEMALE SEMINARY. NR. and MRS. CLARK, who have been for several years employed in teaching, respectfully amounce to the citizens of Carlisle and vicinity, that on the 1st of September, 1866, they will commence the second seasion, in Louther Street, near the German Reformed Church, of their SEMINARY FOR YOUNG LADIES.

The Institution will be both a boarding and day.

their

SEMINARY FOR YOUNG LADIES.

The Institution will be both a boarding and day school, in which all the branches necessary for the complete education of young ladies will be taught. Assistants of the highest character for qualifications and morality will be employed in accordance with the wants of the institution. The government will be conducted on strictly Christian principles, while sectarianism will be as rigidly excluded.

The Principals flatter themselves that their long and successful experience as teachers, as testified by the recommendations in their possession, will onable them to establish an Institution of the highest character for young ladies. They are full spersuaded that such an Institution will be sustained here by the citizens and neighboring country, and hope that their confidence may not be disappointed.

The Scholastic year will consist of four terms (eleven weeks each), beginning on September 1 and ending on second Wednesday in July.

Boarding, including fuel, lights, and

MOMMERCIAL COLLEGE, or removed to the new and spacious Itali, No. 99 and Italian Malerian Principal and Lecturer upon Mercan tile science.

A. OHAMBERIS, Principal and Lecturer upon States.

K. Losiga, in charge of Writing Department.

W. Agent, instructor in Moreantlie Calculations and Associate in Book Keeping Department.

A. Pintans, Teacher in Book Keeping.

T. Williams, Lecturer on Commercial Law.

S. T. Williams, Lecturer on Commercial Law.

Three years have not yet elapsed since the establishment of this institution, during which time upwards of eight flundred students have been in attendance, (representing nearly every State in the Union,) among whom are numbers in Baltimore and elsewhere occupying prominent positions as business men and account ants.

COURSE OF STUDY.

BOOK KEEPING.—The Principal has the utmost confidence in assuring the public that after an experience of lourteen years in qualifying young mon for the Counting from and other important stations, and an extensive acquaintance with the management of business books of every description, (assisted as he is by two scientine accountats,) the course of training in this department is eminently practical and well adapted to the various pursuits of Commerce and Trade, including individual, Partnership, Mercantile, Manufacturius, Commission, Exchange, Banking, Shipping, Steamboating, Compound Company operations, &c.

PENMANSHIP—The exercises under this head are free, easy and graceful, combining rapidity of execution with beauty of construction, thus enabling the student to write an elegant business hand on completion of the course.

MERCANTILE CALCULATIONS in all their various

bearings are taught by the most accurate and expedi-tious method.

Daily lectures are delivered upon the Science of Ac-counts, Mercantile Customs, &c., these in connection with a series of lectures on Commercial Law, are of the

highest importance to all aspiring to occupy prominent

highest importance to all aspring to occupy prominent positions in the business community.

The time necessary for an industrious student to complete the course, varies from 5 to 12 weeks. There being, no vacation, applicants can enter at any time, and attend both day and evening. Examinations are field at stated periods, and diplomas awarded to t. we who graduate. For terms, etc., with sind have a cl. 5 in forwarded by mail.

Carlisla, Feb. 20, 1856.

NONICS WON'T DO: -They never did do more than give temporary remef, and they hever will! It is because they don't touch the eause of the disease. The cause of all ague and billious diseases is the armespheric poison called Miasma or Malaria. Neutralize this poison by its NATURAL ANTHOTE, and all disease c. used by it disappears at once. Is chodes' Fever and Aguê Cure is this antidote to Naiaria, and moreover it is a perfectly harmless medicine. The certificate of the celebrated chomist, J. K. Chitton, of New-York, to this effect, is attached to every, bottle; therefore, if it does no good, it can do no harm.

harm.
This is more than can be said of Quinine, Arsenic, or any other tonic in existence, as their use is ruinous to the constitution and brings on BUAB ACUE, which never allows a person to feel perfectly well for a single moment. In illustration of these truths i annex some

moment. In illustration of these truths I annox some extracts from a letter just received from a Physician:
Geodusrown, Onto, March 17, 1856.
JAS. A. RilloADS, Esq.—Dear Sir: Yoursof 2d inst., is at hand. The Cure arrived late last year, and the difficulty in getting any one to purchase it was greatly increased from the fact that a remedy had been introduced which was growing in favor with the public about getter than using Quinine—not knowing, I presume, that the remedy they used to escape taking quinine-contained the DRUG-TINELE!

Vhis somety (known as "Smith's Tonic.") would in-

This remedy (known as "Smith's Tonic,") would invariably light AR an Ague, but it did not Cure it, as it would often return with renewed vigor. This one cucumstance I deemed in your favor, if I could institute a test comparison between it and your CURE. The fol-

a test comparison between it and your CUitE. The following is the result;

Three persons took your "Cure," all of which were cases of "Quotidian Intermittant Fever," of many weeks standing. They had tried Quinine and other remedies, occasionally missing a chill, but it was (as in all such cases.) slowly wearing them out, and laying the foundath no fother and severer maindles. I did succeed in effecting a adical cure of all three of these cases with your remedy, and they have not had a chill since. In all three of these cases the "Smith's Tonic" had been used, and would, as before startd, break the chill, but after a period or two had elapsed it would protuin.

retuen.
I think there will be no difficulty now in giving to Think there will be no difficulty new in giving to your "Curs" the vantage ground of any other remedy now in use here, &c., &c. WM. BUCKNER, M. D. KHODES FEVER and AGUE CURE, or ANTIDUTE TO MALARIA, the only harinless remedy in existence is equally cortain as a retree." Take it when you feel, the chills coming on, and you will haver have a single one.
