Cheap Shirt Making in New York.

A legal investigation now going on in New York, discloses some curious facts touching the manner in which the seamstresses of that city, are imposed upon. The matter under investigation has special reference to shirt makers, of which there seems to be a very large number there, and their condition may be judged of by the miserable price paid for their labor. The standard price is twelve and a half cents per piece, and the garments must be well made, as it has to undergo a thorough inspection, with bosom and collar—bringing from one dollar two cents to one dollar twenty-five cents at retail. The material in these shirts cost probably about thirty-seven and a half cents, so that the total cost is fifty cents which leaves a clear profit to the employer of one-half at least for the purchase of the material, the cutting, and the sale. Two of these garments are, no doubt, a full day's work making the cost of the weekly earnings one dollar and a half. With this miserable piece, many of them have to feed small families, pay house rent, and clothe themselves and children. It is needless to say that it cannot be done, and the consequence is a larger amount of misery and destitution. Their pitiable condition is taken advantage of by many in business, whose only aim is to assist and oppress, in the case noticed in the New York papers, two dollars were required to be deposited as security for the execution of the work, and the prompt return of the garments. Upon their return, fault was found with them, and an offer was made to sell them to the maker, but the two dollars deposited were not returned. We have but one other case of this kind, in which the maker in the city, among the grasping and heartless—Daily News.

A New Potato.

A. B. Gray, Esq., during his recent explorations across the Continent, for the purpose of ascertaining the practicability of constructing a railway to the Pacific, discovered remarkable plants at the head of the Gulf of California, it being found in abundance through a range of naked sand hills striking "Adair Bay." It is described as a parasite with a long and fleshy root, and has been called "Ammaroma Sonora," signifying Sand Food of Sonora. The fresh plant is cooked by roasting on hot coals and resembles the sweet potato in taste, having much acrimony matter about it. It is likewise dried and mixed with less palatable kinds of food, such as musquit, beans, &c.—It is represented to be a very delicious vegetable, and could it be transplanted, Mr. Gray believes that it would constitute an important acquisition to the table, probably not second in demand to the sweet potato, or asparagus. It is said that the "Tano" or "Sando" Island potato has been introduced into cultivation in several of the Southern States. It is described as a "delicious vegetable," and the plant is very productive. The editor of the San Antonio Texan says that a gentleman in that vicinity raised six bushels of the article upon a piece of ground fifteen feet square.

Corn Meal is quiet—sales of 150 barrels Pennsylvania at \$4.75 per bushel. There is but little wheat offering.
