New Mode of Grafting. laims to have discovered a new mode of claims to have discovered a new mode of grafting fruit which hosays he has thour, oughly and successfully tested, and with the best results. If this is realy so, it ought to be made public, and if it cannot be successfully prastised, that fact ought to be ascertained by fruit culturists, many of whom will, I hope, after reading this stry it at once. As I know the gentleman who communicated this to me, will not write it out for you or any ne else, I take the liberty "to s cal some of his thunder" for the public good. He says that last Spring (a year ago now,) be cut some scions of pears and other fruit very late in the season, after the buds had become very much swelled, and being in a great hurry while setting his grafts, on account of other and more pressing business, he hastily contrived a quicker modu of grafting han the old fashioned cleft-grafting although he had no very strong hopes that hastily contrived a quicker mode of grafting than the old fashioned cleft-grafting although he had no very strong hopes that the grafts would live, and was, in fact, very indifferent whether they did or not. His mode was simply this:—Instead of cutting of a limb and making a cleft, he took any desireed limb that was large enough to admit of it, and made a gash into it with his knife, downwards and diagonally to the grain of the wood, at about the angle that a limb would naturally grow, not deep enough to weaken the limb too much; indeed the limb must be large enough to admit of a gash or cut deep enough to let the scion in, so as to secure It firmly. The limb before the scion is inserted looks as though it had received a light blow with a sharp hatchet, at about the angle that a wan would naturally strike with a hatchet. The gash must be smooth, and the bark smoothly cut— not mangled. He then shaved off the lower end of a scion, as in cleft-grafting, and insented in this gash up to the bark of the scion the grafted limb met evenly on both sides of the scion. All that remained to do was to put wax in the angles made by the scion with the limb, and one ach side of the scion with the limb, and one ach side of the scion. scion. All that remained to do was to put wax in the angles made by the scion with the limb, and on each side of the scion into the gash. To his great surprise, the majority of his scions grafted lived, and are now thrifty, although hastily and carelessly set. This year he has improved on this method, by using a sharp three eighth or one quarter inch (or even in same cases one half inch.) "firmer chieel," which he drives into the limb, or even into the trunk of the tree when not to old and large instead of using a knife and making a he drives into the limb, or even into the trunk of the tree when not to old and large instead of using a knife and making a may be an a gratied are great deat units opening in this way, and he says with unusual success. In this way he has grafted into the trunks of young thrifty trees that were four and even six inches in diameter, and he says more of his grafts live than any share the control of the control

trunks of young thrifty trees that were four and even six inches in diameter, and he says more of his grafts live than any that he ever grafted in any other way. His large experience and practical skill in this line, entitle his opinions to the respect which enduces me to write to you on the subject. He points out the following decided advantages of this over cleft grafing:

Any one can do it. It is not so tedious and laborious as the old modes. Ecconomy of time. Limbs can be made to grow in any desired place or posture on the tree. Economy of wax, and above all, greater certainty by far that the grafts will live. The lower ends of the scions need not be so long and thin as in cleft grafting usually, but may be more "stunt," (as we say of a wedge;) that is to say shorter, and the sides more inclined toward each other.

It has just occurred to me, Messrs. Editors, that I may be a little presuming in treating this as a new mode of grafting; I perhaps ought rather to call it new to me, and to the four treats in the care.

perhaps ought rather to call it new to me, perhaps ought rather to call it new to me, and to other fruit raisers in this section, while it may not be so to you. It has been tried by others here this spring than my eccentric friend, and reported very tavorably of by all. I have not tried it, as I have no trees this year to graft, but I mean to try it next year, unless tried and condemned by some of your correspondents or yourself, with sufficient reasons to convince me of its fatality. It it is not new to some of your experienced correspondents, some of your experienced correspondents, I hope they will report through the Co. Gent. their opinions after actual trial, and their success, as, if it be a successful mode as any, I shall be induced to set more grafts next year than ever before.

SIGMA.

Tomato Preserves.

Take the round yellow variety as soon as ripe, scrape and peel; then to seven pounds of tomatoes add seven pounds of the sugar, and let them stand over night. Take the tomatoes our of the sugar, and boil the syrup, removing the scun. Put in the tomatoes, and boil gently fifteeen or twenty minutes, remove the fruit again and boil until the syrup thickens. On closing, put the fruit into jars and pour the syrup over it, and you will have something to please the taste of the most fastidious.

Remedy for the Hoven.
Cattle pasturing on clover in a wet state are apt to become bloated. I have relieved them in a short time by simply plateing a straw band in their mouth as a bit, and tying it over the head. In their endeaper—if not done well eavors to get it out the win dis expelled from the stomach.—Country Gentlemen.

RICH GLOSSY HAIR, COMPLETELY PRESERVED

TO THE GREATEST AGE.

And who that is gray would not have it restored to former color; or bald, but would have the growth restored, or troubled with dandrud and itching but would have it removed, or troubled with scrofula, scald head, or other eruptions, but would be cured, or with sick headache (neuralgia) but would be cured. It will also remove all pimples from the face and skin. Prof. Wood's Hair Restorative will do all this, see circular and the following.

ANN ARBOH, November 5, 1856.

PROF. O. J. WOOD—Dear Sir: I have heard much said of the wonderful effects of your Hair Restorative, but having been so often cheated by quackery and nostrums, hair dyes, &c., I was disposed to plate your Restorative in the same category or blate with the same category or heard with the same category of the disposed to plate your Restorative in the same category or heard with the same category of the disposed to plate your Restorative in the same category or heard with the same category of the same shall I would be supplied quark remains and the same category of the same shall I would be supplied to the same category of the same shall I would be supplied to the same shall I would be supplied to the same shall be supplied to the sa

by quartery and nostrains, and the control of the c

Very truly and BOLOMON MANN.

FRIEND WOOD: It was a long time after I saw you at Blissfield before I got the bottle of Restorative for which you gave me an order upon your agent in Detroit, and when I got it we concluded to try it on Mrs. Mann's hair, as the surest test of its power. It has done all that you assured me it would do: and others of my family and friends, having witnessed its effects are now using and recommending its use to others as entitled to the highest consideration yor claim for it.

Again, very respectfully and truly yours,
SOLOMON MANN.
