EMORRHOIDS, OR PILES, is a a disease produced by local irritation, costiveness, purgative stimulants, undue determination of blood to the hemorrhoidal vessels by excessive riding or walking, or a congestive state of the liver, and often by a peculiarity of the constitution itself.

It is usually considered under three forms, or varieties, as follows ; Blind Piles, White Piles, and Bleeding Piles.

This disease is so common, and so very well known, that a description of its symptoms is not deemed necessary. The success which has followed the use

of the Embrocation in the cure of this disease, has been truly astonishing. Physicians now advise their patients to try it, as the only PILE MEDICINE.
