EMORRHOIDS, OR PILES, is a a disease produced by local irritation, costiveness, purgative stimulants, undue determination of blood to the hemorrhoidal vessels by excessive riding or walking, or a congestive state of the liver; and often by a peculiarity of the constitution itself.

It is usually considered under three forms, or varieties, as follows : Blind Piles, White Piles, and Bleeding Piles.

This disease is so common, and so very well known, that a description of its symptoms is not deemed necessary. The success which has followed the use

of the Embrocation in the cure of this dis-

ease, has been truly astonishing. Physi-
