Should Sheep be Washed?

This is a question which is exercising to a considerable extent, come of our cotemporaries, and very properly. A corpears to understand the subject, gives "sheep washing" its quietus in a brief communication, the leading points of which are, that it is detrimental to the animal and to the wool, and is withal expensive, and calculated to delay the periods of shearing three or four weeks. The writer contends that washing a sheep in water cold enough to make a man's teeth chatter, and then turning it out to dry itself as the animal best may, must prove hurtful to it. He then goes on to say:

But this is only one feature. It costs a great deal of time and money, which could be applied to a better use in cultivating our spring crop. It is no trifle to wash 3,000 sheep every year.
