The rods in it are composed each of two delicate and well-tempered steel springs, which are ingenuously braided together edge to edge, the lower rods heavier, and having a double covering. This peculiarity of construction makes this skirt very strong and durable, and also so exceedingly flexible that it readily adapts itself to the form of the wearer, and allows of any amount of doubling and crushing without injury to its shape. These skirts are unquestionably the lightest, most desirable, comfortable and ecohomical ever made. These are advantages which ladies who have experienced the discomfort and inconvenience of single springs, will duly appreciate.
