CHEESE.

Those who have been educated to be-It is likely enough that a surfeit on cheese able increase of income. will sometimes kill, or come uncomfortably near it. So will beef a la-mode, oysters, or chicken pot-pie. But eaten regularly and in moderation at every meal, cheese is not only a wholesome diet as a promoter of digestion, but at twenty-five cents per pound even is more economical than meats. This has been satisfactorily proved by experiment and chemical analysis of the two materials, but more satisfactorily by the expetience and every-day practice of the mechanie and field laborer in England, Scotland and Wales, and among the same classes in Holland and Belgium.

Bread, cheese, and beer constitute the dinner of the artisan, mechanic, and ordi nary laborer in all these countries. Cheese, brend, and beer make the breakfasts of themselves and families, and ther, choose, and bread make in the main the suppers of the majority of the working classes in all these countries, and where else shal we find working men and women and children more hardy, healthful and vigorous ? Certainly not in our own country of universal ment enters.

We know from other than Bible authority that "man shall not live by meat alone," and that beer, though it may be wholesome, is not food per se, the conclusion is that the strength, endurance and rooust health of that material.

PARMESAN CHEESE.

This cheese, celebrated for its delicious flavor and beautiful, elastic texture, is made in that Italian territory called the Lodesait district lying between Lodi and Cremona, and comprising the richest grazing portion of the Milanese department. The cows from which the Parmesan cheese is made ard always kept closely guarded and fed all the year round with green food. As the weight of these Italian cream cheeses range from 150 to 200 pounds, of course there are no individual dairies that afford sufficient milk to make one, and so a whole community of Parmese farmers club together-putting in their milk and making cheese first for one and then another, uutill every member of the company is supplied with a cheese weighing from 150 to 200 pounds, according to the quantity of

milk contributed. This Parmese cheese combination is most likely the parent of our combination cheese companies in the United States. There are similar confederacies in two or three of the provinces of France, and two at least in Switzerland at which the famous cheese of Neufchatel and Gruyere is manufactured.

COMIANDER FOR COWS.

It has been found that coriander seed is of these habitual cheese enters comes in a an excellent, and it is believed an infalliaconsiderable degree from the consumption ble alterative of milk. Sometimes it happens that the very finest appearing antiful There is another cheese error that a very in the herd, and most generous milker great many-perhaps the majority of all gives milk that will neither afford good American farmers have failen into, and do butter by itself, and mixed with other milk not seem inclined to fall out of without a always makes with difficulty.
