THE KIRBY TWO-WHEEL MOWER.

A Triumphant Success.

THE COMPLETE SUCCESS of the Early Two. Wheel Mower has never been equalled in the his-tory of mowing and reasing machines. From every part of the country there comes united testimony in regard to its perfectly satisfiely parformation with erry possible kind of work, of is british durant of the past season has more fully than ever bolore demon-strated the gerfiction of principle upon which, not on-ly it, but all of the Eirby machines are built. It has the distibility and hillependent motion of trane and finger-bir peculiar to all Kirby machines, cutting close and clean over all variations of ground.

And clean byor all variations of ground. JOINTED CONNECTING, RODA With the intmost simplicity and Mirengin, there are combined in the Kirby Two-Wheel Mewer many excel-letics not found in any other machine; and chief among them will be noticed the Jointed Connecting Rod, (or pitnan) an invention of Mr. Kirby's, and a feature belonging exclusively to this mower. The joint in the Connecting Red (or pitman) works simultane-oundy with the joint in the finger-bar, keeping the Connecting Rod.

ALWAYS IN A PERFECT LINE

ALWAYS'IN A PERFECT LINE with the outling apparatus, allowing the knife to run perfectly free, southout binding, at whatayer angle the bar may be raised or folded; thus decreasing the directly individe the second of folded; thus decreasing the directly cultury concerns decreasing the already new light draft, and adding largely to the durability, by relieving the connecting rod, and knife-head from liability to break-age consequent upon the binding and friction of these parts, incident to all other two-wheel machines. "By a bonvenheat hever, the bar is talsed to pass au obstruction, or even a tree, or folded convolved yarge grange the misshine in front for transportation, unliqui throug-ing out of gets? stopping the team, or the driver leaving his seat: A loces or rigid toughe, as desired, without stopping, when desired, by sither foot or hand. A loces or rigid toughe, as desired, without stopping neck, leave meck yoke entirely off and put machine to work with stopping. They are especially shaped to pre-vent clogging; they have steel places, easily replaced when desired, by a with a can be raised or lowered without stopping. They are sepecially shaped to pre-vent clogging; they have steel plates, easily replaced when desired, by no with steel plates, easily replaced when desired, by no have steel plates, easily replaced when desired, by hey are sepecially shaped to pre-vent clogging; they have steel plates, easily replaced when the of draft is direct on cutting apparatus where when the of draft is direct on cutting apparatus where
